FUND SUMMARY: NVIT INVESTOR DESTINATIONS AGGRESSIVE FUND

Objective

The NVIT Investor Destinations Aggressive Fund (“Aggressive Fund” or the “Fund”) seeks maximum growth of capital consistent with a more aggressive level of risk as compared to other Investor Destinations Funds.

Fees and Expenses

This table describes the fees and expenses you may pay when buying and holding shares of the Fund. Sales charges and other expenses that may be imposed by variable insurance contracts are not included. If these charges were reflected, the expenses listed below would be higher. See the variable insurance contract prospectus.

	Class II Shares	Class P Shares
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
Management Fees	0.13%	0.13%
Distribution and/or Service (12b-1) Fees	0.25%	0.25%
Other Expenses	0.21%	0.06%
Acquired Fund Fees and Expenses	0.29%	0.29%
Total Annual Fund Operating Expenses	0.88%	0.73%

Example

This Example is intended to help you to compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example, however, does not include charges that are imposed by variable insurance contracts. If these charges were reflected, the expenses listed below would be higher.

This Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those time periods. It assumes a 5% return each year and no change in expenses, and any expense limitation or fee waivers that may apply for the periods indicated above under “Fees and Expenses.” Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class II Shares	\$90	\$281	\$488	\$1,084
Class P Shares	75	233	406	906

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 12.92% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a “fund-of-funds” that invests primarily in affiliated mutual funds representing a variety of asset classes. The Fund aims to provide diversification across major asset classes—U.S. stocks, international stocks and bonds—by investing primarily in mutual funds offered by Nationwide Variable Insurance Trust and affiliated or unaffiliated exchange-traded funds (“ETFs”) (each, an “Underlying Fund” or collectively, “Underlying Funds”), as well as a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”).

Each Underlying Fund invests directly in equity or fixed-income securities, as appropriate to its investment objective and strategies. Many Underlying Funds are index funds, which means they seek to match the investment returns of specified stock or bond indices before the deduction of the Underlying Funds’ expenses. The Fund also invests in certain Underlying Funds that are not index funds. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Although the Fund seeks to provide diversification across major asset classes, the Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds or the Nationwide Contract). However, the Fund

FUND SUMMARY: NVIT INVESTOR DESTINATIONS AGGRESSIVE FUND (cont.)

may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

The Fund pursues its objective for maximum growth of capital with an aggressive level of risk by investing heavily in Underlying Funds that invest in equity securities, such as common stocks of U.S. and international companies (including smaller companies), that the investment adviser believes offer opportunities for capital growth. Consistent with this investment strategy, as of the date of this Prospectus, the Fund allocates approximately 56% of its net assets in U.S. stocks, approximately 34% in international stocks, and approximately 10% in bonds. The investment adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity. The Fund is designed for investors who are comfortable with assuming the risks associated with investing in a high percentage of stocks, including international stocks. The Fund is also designed for investors with long time horizons, who want to maximize their long-term returns and who have a high tolerance for possible short-term losses.

Principal Risks

The Fund cannot guarantee that it will achieve its investment objective.

As with any fund, the value of the Fund's investments—and therefore, the value of Fund shares—may fluctuate. These changes may occur because of:

Management risk – the Fund is subject to the risk that the methods and analyses employed by its investment adviser, or by the investment advisers or subadvisers to the Underlying Funds, may not produce the desired results. This could cause the Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Fund-of-funds risk – there are certain risks associated with a structure whereby the Fund invests primarily in other mutual funds. These risks include that: (1) the Fund will indirectly pay a proportional share of the fees and expenses of the Underlying Funds in which it invests; (2) the Fund's investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more Underlying Funds fail to meet their investment objectives, the Fund's performance could be negatively affected; (3) the Fund is subject to different levels and combinations of risk based on its actual allocation among the various asset classes and Underlying Funds. The potential impact of the risks related to an asset class depends on the size of the Fund's investment allocation to it; (4) Nationwide Fund Advisors' (the "Adviser") evaluations and allocation among asset classes and Underlying Funds may be incorrect; (5)

the Adviser may add or delete Underlying Funds, or alter the Fund's asset allocation, at its discretion. Changes to the Fund's Underlying Funds or allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss; and (6) in selecting the Underlying Funds in which the Fund invests, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees from affiliated Underlying Funds and, therefore, has an incentive to invest the Fund's assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). To the extent that the Fund invests in the Nationwide Contract, Nationwide Life Insurance Company, an affiliate of the investment adviser, also earns money. Notwithstanding the foregoing, the Adviser has a fiduciary duty to the Fund and must act in the best interest of the Fund.

Exchange-traded funds risk – when the Fund invests in an exchange-traded fund ("ETF"), you will indirectly bear fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. In addition, the Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). The Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted for a number of reasons.

Market risk – the risk that one or more markets in which an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably.

Equity securities risk – stock markets are volatile. The price of an equity security fluctuates based on changes in a company's financial condition and overall market and economic conditions.

Foreign securities risk – foreign securities may be more volatile, harder to price and less liquid than U.S. securities. The prices of foreign securities may be further affected by other factors, such as changes in the exchange rates between the U.S. dollar and the currencies in which the securities are traded.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS AGGRESSIVE FUND (cont.)

Smaller company risk – smaller companies are usually less stable in price and less liquid than larger, more established companies. Smaller companies are more vulnerable than larger companies to adverse business and economic developments and may have more limited resources. Therefore, they generally involve greater risk.

Index fund risk – an Underlying Fund that seeks to match the performance of an index does not use defensive strategies or attempt to reduce its exposure to poorly performing securities. Further, correlation between an Underlying Fund's performance and that of the index may be negatively affected by the Underlying Fund's expenses, changes in the composition of the index, and the timing of purchase and redemption of Underlying Fund shares.

Limited portfolio holdings risk – because the Fund may hold large positions in an Underlying Fund or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on the Fund's value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

Fixed-income securities risk – investments in fixed-income securities, such as bonds, subject the Fund to interest rate risk, credit risk and prepayment and call risk, which may affect the value of your investment. Interest rate risk is the risk that the value of fixed-income securities will decline when interest rates rise. Prices of longer-term securities generally change more in response to interest rate changes than prices of shorter-term securities. To the extent an Underlying Fund invests a substantial portion of its assets in debt securities with longer-term maturities, rising interest rates are more likely to cause periods of increased volatility and redemptions, and may cause the value of the Fund's investments to decline significantly. Currently, interest rates are at or near historic lows, which may increase an Underlying Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Credit risk is the risk that the issuer of a bond may default if it is unable to pay interest or principal when due. If an issuer defaults, the Underlying Fund, and therefore the Fund, may lose money. Changes in a bond issuer's credit rating or the market's perceptions of an issuer's creditworthiness also may affect the value of a bond. Prepayment and call risk is the risk that certain debt securities will be paid off by the issuer more quickly than anticipated. If this occurs, an Underlying Fund may be required to invest the proceeds in securities with lower yields.

Liquidity risk – when there is little or no active trading market for specific types of securities or instruments, it can become more difficult to sell the securities or instruments at or near their perceived value. An inability to sell a portfolio

position can adversely affect an Underlying Fund's value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk also includes the risk that an Underlying Fund will experience significant net redemptions of its shares at a time when it cannot find willing buyers for its portfolio securities or instruments or can sell its portfolio securities or instruments only at a material loss. To meet redemption requests, an Underlying Fund may be forced to sell other securities or instruments that are more liquid, but at unfavorable times and conditions. Investments in foreign securities tend to have more exposure to liquidity risk than domestic securities.

Derivatives risk – derivatives may be volatile and may involve significant risks. The underlying security, commodity, measure or other instrument on which a derivative is based, or the derivative itself, may not perform as expected. Normally derivatives involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing the Fund's or Underlying Fund's opportunities for gains. Some derivatives have the potential for unlimited loss, including a loss that may be greater than the amount invested. They also present default risks if the counterparty to a derivatives contract fails to fulfill its obligations to the Fund or Underlying Fund. Certain derivatives held by a Fund or Underlying Fund may be illiquid, making it difficult to close out an unfavorable position.

Futures – the prices of futures contracts typically are more volatile than those of stocks and bonds. Small movements in the values of the assets or measures underlying futures contracts can cause disproportionately larger losses to the Fund or an Underlying Fund. While futures may be more liquid than other types of derivatives, they may experience periods when they are less liquid than stocks, bonds or other investments.

Options – purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. Investments in options are considered speculative. An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a "call option") or sell (a "put option") the underlying security or futures contract (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the "exercise price") during a period of time or on a specified date. When the Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if the Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above

FUND SUMMARY: NVIT INVESTOR DESTINATIONS AGGRESSIVE FUND (cont.)

the option's exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If the Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option's exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When the Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option). If an option purchased by the Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Swaps – using swaps can involve greater risks than if an Underlying Fund were to invest directly in the underlying securities or assets. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund's losses and reducing the Underlying Fund's opportunities for gains. Currently there are few central exchanges or markets for swap contracts, and therefore they may be less liquid than exchange-traded instruments. If a swap counterparty fails to meet its obligations under the contract, the Underlying Fund may lose money.

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows the volatility or variability of the Fund's annual total returns over time and shows that Fund performance can change from year to year. The table shows the Fund's average annual total returns for certain time periods compared to the returns of a comparable broad-based securities index. Remember, however, that past performance is not necessarily an indication of how the Fund will perform in the future. The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance contracts. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns – Class II Shares (Years Ended December 31,)

Highest Quarter: 12.51% – 3rd qtr of 2010

Lowest Quarter: -16.78% – 3rd qtr of 2011

The inception date for Class P shares is April 30, 2012. Pre-inception historical performance for Class P shares is based on the previous performance of Class II shares. Performance for Class P shares has not been adjusted to reflect that share class's lower expenses than those of Class II shares.

Average Annual Total Returns (For the Periods Ended December 31, 2019)

	1 year	5 years	10 years
Class II Shares	23.73%	7.68%	9.45%
Class P Shares	23.80%	7.83%	9.58%
Morningstar® Aggressive Target Risk Index (reflects no deduction for fees or expenses)	25.93%	8.85%	10.09%

Portfolio Management

Tax Information

The dividends and distributions paid by the Fund to the insurance company separate accounts will consist of ordinary income, capital gains, or some combination of both. Because shares of the Fund must be purchased through separate accounts used to fund variable insurance contracts, such dividends and distributions will be exempt from current taxation by contract holders if left to accumulate within a separate account. Consult the variable insurance contract prospectus for additional tax information.

Payments to Broker-Dealers and Other Financial Intermediaries

This Fund is only offered as an underlying investment option for variable insurance contracts. The Fund and its related companies may make payments to the sponsoring insurance companies (or their affiliates) for distribution and/or other services, and to broker-dealers and other financial intermediaries that distribute the variable insurance contracts. These payments may create a conflict of interest by influencing the insurance companies to include the Fund as an underlying investment option in the variable insurance contracts, and by influencing the broker-dealers and other financial intermediaries to distribute variable insurance contracts that include the Fund as an underlying investment option over other variable insurance contracts or to otherwise recommend the selection of the Fund as an underlying investment option by contract owners instead of other funds that also may be available investment options. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY AGGRESSIVE FUND

Objective

The NVIT Investor Destinations Moderately Aggressive Fund (“Moderately Aggressive Fund” or the “Fund”) seeks growth of capital, but also seeks income consistent with a moderately aggressive level of risk as compared to other Investor Destinations Funds.

Fees and Expenses

This table describes the fees and expenses you may pay when buying and holding shares of the Fund. Sales charges and other expenses that may be imposed by variable insurance contracts are not included. If these charges were reflected, the expenses listed below would be higher. See the variable insurance contract prospectus.

	Class II Shares	Class P Shares
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
Management Fees	0.13%	0.13%
Distribution and/or Service (12b-1) Fees	0.25%	0.25%
Other Expenses	0.19%	0.04%
Acquired Fund Fees and Expenses	0.28%	0.28%
Total Annual Fund Operating Expenses	0.85%	0.70%

Example

This Example is intended to help you to compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example, however, does not include charges that are imposed by variable insurance contracts. If these charges were reflected, the expenses listed below would be higher.

This Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those time periods. It assumes a 5% return each year and no change in expenses, and any expense limitation or fee waivers that may apply for the periods indicated above under “Fees and Expenses.” Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class II Shares	\$87	\$271	\$471	\$1,049
Class P Shares	72	224	390	871

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 11.88% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a “fund-of-funds” that invests primarily in affiliated mutual funds representing a variety of asset classes. The Fund aims to provide diversification across major asset classes—U.S. stocks, international stocks and bonds—by investing primarily in mutual funds offered by Nationwide Variable Insurance Trust and affiliated or unaffiliated exchange-traded funds (“ETFs”) (each, an “Underlying Fund” or collectively, “Underlying Funds”), as well as a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”).

Each Underlying Fund invests directly in equity or fixed-income securities (including mortgage-backed securities), as appropriate to its investment objective and strategies. Many Underlying Funds are index funds, which means they seek to match the investment returns of specified stock or bond indices before the deduction of the Underlying Funds’ expenses. The Fund also invests in certain Underlying Funds that are not index funds. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Although the Fund seeks to provide diversification across major asset

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY AGGRESSIVE FUND (cont.)

classes, the Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds or the Nationwide Contract). However, the Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

The Fund pursues its objective for growth of capital, but also income, with a moderately aggressive level of risk by investing considerably in Underlying Funds that invest in equity securities, such as common stocks of U.S. and international companies (including smaller companies), that the investment adviser believes offer opportunities for capital growth. Consistent with this investment strategy, as of the date of this Prospectus, the Fund allocates approximately 50% of its net assets in U.S. stocks, approximately 30% in international stocks and approximately 20% in bonds. The investment adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity. The Fund is designed for relatively aggressive investors who want to maximize returns over the long-term but who have a tolerance for possible short-term losses or who are looking for some additional diversification.

Principal Risks

The Fund cannot guarantee that it will achieve its investment objective.

As with any fund, the value of the Fund's investments—and therefore, the value of Fund shares—may fluctuate. These changes may occur because of:

Management risk – the Fund is subject to the risk that the methods and analyses employed by its investment adviser, or by the investment advisers or subadvisers to the Underlying Funds, may not produce the desired results. This could cause the Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Fund-of-funds risk – there are certain risks associated with a structure whereby the Fund invests primarily in other mutual funds. These risks include that: (1) the Fund will indirectly pay a proportional share of the fees and expenses of the Underlying Funds in which it invests; (2) the Fund's investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more Underlying Funds fail to meet their investment objectives, the Fund's performance could be negatively affected; (3) the Fund is subject to different levels and combinations of risk based on its actual allocation among the various asset classes and Underlying Funds. The potential impact of the risks related to an asset class depends on the size of the Fund's investment allocation to it; (4) Nationwide Fund Advisors' (the "Adviser") evaluations and allocation among

asset classes and Underlying Funds may be incorrect; (5) the Adviser may add or delete Underlying Funds, or alter the Fund's asset allocation, at its discretion. Changes to the Fund's Underlying Funds or allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss; and (6) in selecting the Underlying Funds in which the Fund invests, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees from affiliated Underlying Funds and, therefore, has an incentive to invest the Fund's assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). To the extent that the Fund invests in the Nationwide Contract, Nationwide Life Insurance Company, an affiliate of the investment adviser, also earns money. Notwithstanding the foregoing, the Adviser has a fiduciary duty to the Fund and must act in the best interest of the Fund.

Exchange-traded funds risk – when the Fund invests in an exchange-traded fund ("ETF"), you will indirectly bear fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. In addition, the Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). The Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted for a number of reasons.

Market risk – the risk that one or more markets in which an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably.

Equity securities risk – stock markets are volatile. The price of an equity security fluctuates based on changes in a company's financial condition and overall market and economic conditions.

Foreign securities risk – foreign securities may be more volatile, harder to price and less liquid than U.S. securities. The prices of foreign securities may be further affected by other factors, such as changes in the exchange rates between the U.S. dollar and the currencies in which the securities are traded.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY AGGRESSIVE FUND (cont.)

Smaller company risk – smaller companies are usually less stable in price and less liquid than larger, more established companies. Smaller companies are more vulnerable than larger companies to adverse business and economic developments and may have more limited resources. Therefore, they generally involve greater risk.

Fixed-income securities risk – investments in fixed-income securities, such as bonds, subject the Fund to interest rate risk, credit risk and prepayment and call risk, which may affect the value of your investment. Interest rate risk is the risk that the value of fixed-income securities will decline when interest rates rise. Prices of longer-term securities generally change more in response to interest rate changes than prices of shorter-term securities. To the extent an Underlying Fund invests a substantial portion of its assets in debt securities with longer-term maturities, rising interest rates are more likely to cause periods of increased volatility and redemptions, and may cause the value of the Fund's investments to decline significantly. Currently, interest rates are at or near historic lows, which may increase an Underlying Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Credit risk is the risk that the issuer of a bond may default if it is unable to pay interest or principal when due. If an issuer defaults, the Underlying Fund, and therefore the Fund, may lose money. Changes in a bond issuer's credit rating or the market's perceptions of an issuer's creditworthiness also may affect the value of a bond. Prepayment and call risk is the risk that certain debt securities will be paid off by the issuer more quickly than anticipated. If this occurs, an Underlying Fund may be required to invest the proceeds in securities with lower yields.

Liquidity risk – when there is little or no active trading market for specific types of securities or instruments, it can become more difficult to sell the securities or instruments at or near their perceived value. An inability to sell a portfolio position can adversely affect an Underlying Fund's value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk also includes the risk that an Underlying Fund will experience significant net redemptions of its shares at a time when it cannot find willing buyers for its portfolio securities or instruments or can sell its portfolio securities or instruments only at a material loss. To meet redemption requests, an Underlying Fund may be forced to sell other securities or instruments that are more liquid, but at unfavorable times and conditions. Investments in foreign securities tend to have more exposure to liquidity risk than domestic securities.

Mortgage-backed securities risk – mortgage-backed securities generally are subject to the same types of risk that apply to other fixed-income securities, such as interest

rate risk, credit risk, and prepayment and call risk. Mortgage-backed securities also are subject to extension risk, which is the risk that when interest rates rise, certain mortgage-backed securities will be paid in full by the issuer more slowly than anticipated. This can cause the market value of the security to fall because the market may view its interest rate as low for a longer-term investment. Through its investments in mortgage-backed securities, an Underlying Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans, which are loans made to borrowers with weakened credit histories, generally have higher default rates than loans that meet government underwriting requirements.

Index fund risk – an Underlying Fund that seeks to match the performance of an index does not use defensive strategies or attempt to reduce its exposure to poorly performing securities. Further, correlation between an Underlying Fund's performance and that of the index may be negatively affected by the Underlying Fund's expenses, changes in the composition of the index, and the timing of purchase and redemption of Underlying Fund shares.

Limited portfolio holdings risk – because the Fund may hold large positions in an Underlying Fund or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on the Fund's value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

Derivatives risk – derivatives may be volatile and may involve significant risks. The underlying security, commodity, measure or other instrument on which a derivative is based, or the derivative itself, may not perform as expected. Normally derivatives involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing the Fund's or Underlying Fund's opportunities for gains. Some derivatives have the potential for unlimited loss, including a loss that may be greater than the amount invested. They also present default risks if the counterparty to a derivatives contract fails to fulfill its obligations to the Fund or Underlying Fund. Certain derivatives held by a Fund or Underlying Fund may be illiquid, making it difficult to close out an unfavorable position.

Futures – the prices of futures contracts typically are more volatile than those of stocks and bonds. Small movements in the values of the assets or measures underlying futures contracts can cause disproportionately larger losses to the Fund or an Underlying Fund. While futures may be more

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY AGGRESSIVE FUND (cont.)

liquid than other types of derivatives, they may experience periods when they are less liquid than stocks, bonds or other investments.

Options – purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. Investments in options are considered speculative. An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a “call option”) or sell (a “put option”) the underlying security or futures contract (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the “exercise price”) during a period of time or on a specified date. When the Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if the Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If the Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When the Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option). If an option purchased by the Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Swaps – using swaps can involve greater risks than if an Underlying Fund were to invest directly in the underlying securities or assets. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund’s losses and reducing the Underlying Fund’s opportunities for gains. Currently there are few central exchanges or markets for swap contracts, and therefore they may be less liquid than exchange-traded instruments. If a swap counterparty fails to meet its obligations under the contract, the Underlying Fund may lose money.

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows the volatility or variability of the Fund’s annual total returns over time and shows that Fund performance can change from year to year. The table shows the Fund’s average annual total returns for certain time periods compared to the returns of a comparable broad-based securities index. Remember, however, that past performance is not necessarily an indication of how the Fund will perform in the future. The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance contracts. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns – Class II Shares (Years Ended December 31,)

Highest Quarter: 10.67% – 3rd qtr of 2010
Lowest Quarter: -13.80% – 3rd qtr of 2011

The inception date for Class P shares is April 30, 2012. Pre-inception historical performance for Class P shares is based on the previous performance of Class II shares. Performance for Class P shares has not been adjusted to reflect that share class’s lower expenses than those of Class II shares.

Average Annual Total Returns (For the Periods Ended December 31, 2019)

	1 year	5 years	10 years
Class II Shares	21.83%	7.15%	8.59%
Class P Shares	22.04%	7.31%	8.70%
Morningstar® Moderately Aggressive Target Risk Index (reflects no deduction for fees or expenses)	22.97%	7.96%	9.08%

Keith P. Robinette, CFA	Senior Director of Asset Strategies	Since 2017
Andrew Urban, CFA	Senior Director of Asset Strategies	Since 2017

Tax Information

The dividends and distributions paid by the Fund to the insurance company separate accounts will consist of ordinary income, capital gains, or some combination of both. Because shares of the Fund must be purchased through separate accounts used to fund variable insurance contracts, such dividends and distributions will be exempt from current taxation by contract holders if left to accumulate within a separate account. Consult the variable insurance contract prospectus for additional tax information.

Payments to Broker-Dealers and Other Financial Intermediaries

This Fund is only offered as an underlying investment option for variable insurance contracts. The Fund and its related companies may make payments to the sponsoring insurance companies (or their affiliates) for distribution and/or other services, and to broker-dealers and other financial intermediaries that distribute the variable insurance contracts. These payments may create a conflict of interest by influencing the insurance companies to include the Fund as an underlying investment option in the variable insurance contracts, and by influencing the broker-dealers and other financial intermediaries to distribute variable insurance contracts that include the Fund as an underlying investment option over other variable insurance contracts or to otherwise recommend the selection of the Fund as an underlying investment option by contract owners instead of other funds that also may be available investment options. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CAPITAL APPRECIATION FUND

Objective

The NVIT Investor Destinations Capital Appreciation Fund (“Capital Appreciation Fund” or the “Fund”) seeks growth of capital, but also seeks income consistent with a less aggressive level of risk as compared to other Investor Destinations Funds.

Fees and Expenses

This table describes the fees and expenses you may pay when buying and holding shares of the Fund. Sales charges and other expenses that may be imposed by variable insurance contracts are not included. If these charges were reflected, the expenses listed below would be higher. See the variable insurance contract prospectus.

	Class II Shares	Class P Shares
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
Management Fees	0.13%	0.13%
Distribution and/or Service (12b-1) Fees	0.25%	0.25%
Other Expenses	0.19%	0.04%
Acquired Fund Fees and Expenses	0.27%	0.27%
Total Annual Fund Operating Expenses	0.84%	0.69%

Example

This Example is intended to help you to compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example, however, does not include charges that are imposed by variable insurance contracts. If these charges were reflected, the expenses listed below would be higher.

This Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those time periods. It assumes a 5% return each year and no change in expenses, and any expense limitation or fee waivers that may apply for the periods indicated above under “Fees and Expenses.” Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class II Shares	\$86	\$268	\$466	\$1,037
Class P Shares	70	221	384	859

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 9.90% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a “fund-of-funds” that invests primarily in affiliated mutual funds representing a variety of asset classes. The Fund aims to provide diversification across major asset classes—U.S. stocks, international stocks and bonds—by investing primarily in mutual funds offered by Nationwide Variable Insurance Trust and affiliated or unaffiliated exchange-traded funds (“ETFs”) (each, an “Underlying Fund” or collectively, “Underlying Funds”), as well as a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”).

Each Underlying Fund invests directly in equity or fixed-income securities (including mortgage-backed securities), as appropriate to its investment objective and strategies. Many Underlying Funds are index funds, which means they seek to match the investment returns of specified stock or bond indices before the deduction of the Underlying Funds’ expenses. The Fund also invests in certain Underlying Funds that are not index funds. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Although the Fund seeks to provide diversification across major asset

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CAPITAL APPRECIATION FUND (cont.)

classes, the Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds or the Nationwide Contract). However, the Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

The Fund pursues its objective for growth of capital, but also income, with a less aggressive level of risk by investing considerably in Underlying Funds that invest in equity securities, such as common stocks of U.S. and international companies (including smaller companies), that the investment adviser believes offer opportunities for capital growth. It also invests to a lesser extent in Underlying Funds that invest in fixed-income securities (including mortgage-backed securities) in order to generate investment income. Consistent with this investment strategy, as of the date of this Prospectus, the Fund allocates approximately 45% of its net assets in U.S. stocks, approximately 25% in international stocks and approximately 30% in bonds. The investment adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity. The Fund is designed for investors who want to emphasize capital growth over the long term, and who have a tolerance for possible short-term losses, but who also seek to reduce risk by including some investments offering investment income.

Principal Risks

The Fund cannot guarantee that it will achieve its investment objective.

As with any fund, the value of the Fund's investments—and therefore, the value of Fund shares—may fluctuate. These changes may occur because of:

Management risk – the Fund is subject to the risk that the methods and analyses employed by its investment adviser, or by the investment advisers or subadvisers to the Underlying Funds, may not produce the desired results. This could cause the Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Fund-of-funds risk – there are certain risks associated with a structure whereby the Fund invests primarily in other mutual funds. These risks include that: (1) the Fund will indirectly pay a proportional share of the fees and expenses of the Underlying Funds in which it invests; (2) the Fund's investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more Underlying Funds fail to meet their investment objectives, the Fund's performance could be negatively affected; (3) the Fund is subject to different levels and combinations of risk based on its actual allocation among the various asset classes and Underlying Funds. The potential impact of the

risks related to an asset class depends on the size of the Fund's investment allocation to it; (4) Nationwide Fund Advisors' (the "Adviser") evaluations and allocation among asset classes and Underlying Funds may be incorrect; (5) the Adviser may add or delete Underlying Funds, or alter the Fund's asset allocation, at its discretion. Changes to the Fund's Underlying Funds or allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss; and (6) in selecting the Underlying Funds in which the Fund invests, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees from affiliated Underlying Funds and, therefore, has an incentive to invest the Fund's assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). To the extent that the Fund invests in the Nationwide Contract, Nationwide Life Insurance Company, an affiliate of the investment adviser, also earns money. Notwithstanding the foregoing, the Adviser has a fiduciary duty to the Fund and must act in the best interest of the Fund.

Exchange-traded funds risk – when the Fund invests in an exchange-traded fund ("ETF"), you will indirectly bear fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. In addition, the Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). The Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted for a number of reasons.

Market risk – the risk that one or more markets in which an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably.

Equity securities risk – stock markets are volatile. The price of an equity security fluctuates based on changes in a company's financial condition and overall market and economic conditions.

Foreign securities risk – foreign securities may be more volatile, harder to price and less liquid than U.S. securities. The prices of foreign securities may be further affected by

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CAPITAL APPRECIATION FUND (cont.)

other factors, such as changes in the exchange rates between the U.S. dollar and the currencies in which the securities are traded.

Smaller company risk – smaller companies are usually less stable in price and less liquid than larger, more established companies. Smaller companies are more vulnerable than larger companies to adverse business and economic developments and may have more limited resources. Therefore, they generally involve greater risk.

Fixed-income securities risk – investments in fixed-income securities, such as bonds, subject the Fund to interest rate risk, credit risk and prepayment and call risk, which may affect the value of your investment. Interest rate risk is the risk that the value of fixed-income securities will decline when interest rates rise. Prices of longer-term securities generally change more in response to interest rate changes than prices of shorter-term securities. To the extent an Underlying Fund invests a substantial portion of its assets in debt securities with longer-term maturities, rising interest rates are more likely to cause periods of increased volatility and redemptions, and may cause the value of the Fund's investments to decline significantly. Currently, interest rates are at or near historic lows, which may increase an Underlying Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Credit risk is the risk that the issuer of a bond may default if it is unable to pay interest or principal when due. If an issuer defaults, the Underlying Fund, and therefore the Fund, may lose money. Changes in a bond issuer's credit rating or the market's perceptions of an issuer's creditworthiness also may affect the value of a bond. Prepayment and call risk is the risk that certain debt securities will be paid off by the issuer more quickly than anticipated. If this occurs, an Underlying Fund may be required to invest the proceeds in securities with lower yields.

Liquidity risk – when there is little or no active trading market for specific types of securities or instruments, it can become more difficult to sell the securities or instruments at or near their perceived value. An inability to sell a portfolio position can adversely affect an Underlying Fund's value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk also includes the risk that an Underlying Fund will experience significant net redemptions of its shares at a time when it cannot find willing buyers for its portfolio securities or instruments or can sell its portfolio securities or instruments only at a material loss. To meet redemption requests, an Underlying Fund may be forced to sell other securities or instruments that are more liquid, but at unfavorable times and conditions. Investments in foreign securities tend to have more exposure to liquidity risk than domestic securities.

Mortgage-backed securities risk – mortgage-backed securities generally are subject to the same types of risk that apply to other fixed-income securities, such as interest rate risk, credit risk, and prepayment and call risk. Mortgage-backed securities also are subject to extension risk, which is the risk that when interest rates rise, certain mortgage-backed securities will be paid in full by the issuer more slowly than anticipated. This can cause the market value of the security to fall because the market may view its interest rate as low for a longer-term investment. Through its investments in mortgage-backed securities, an Underlying Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans, which are loans made to borrowers with weakened credit histories, generally have higher default rates than loans that meet government underwriting requirements.

Index fund risk – an Underlying Fund that seeks to match the performance of an index does not use defensive strategies or attempt to reduce its exposure to poorly performing securities. Further, correlation between an Underlying Fund's performance and that of the index may be negatively affected by the Underlying Fund's expenses, changes in the composition of the index, and the timing of purchase and redemption of Underlying Fund shares.

Limited portfolio holdings risk – because the Fund may hold large positions in an Underlying Fund or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on the Fund's value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

Derivatives risk – derivatives may be volatile and may involve significant risks. The underlying security, commodity, measure or other instrument on which a derivative is based, or the derivative itself, may not perform as expected. Normally derivatives involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing the Fund's or Underlying Fund's opportunities for gains. Some derivatives have the potential for unlimited loss, including a loss that may be greater than the amount invested. They also present default risks if the counterparty to a derivatives contract fails to fulfill its obligations to the Fund or Underlying Fund. Certain derivatives held by a Fund or Underlying Fund may be illiquid, making it difficult to close out an unfavorable position.

Futures – the prices of futures contracts typically are more volatile than those of stocks and bonds. Small movements in the values of the assets or measures underlying futures contracts can cause disproportionately larger losses to the

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CAPITAL APPRECIATION FUND (cont.)

Fund or an Underlying Fund. While futures may be more liquid than other types of derivatives, they may experience periods when they are less liquid than stocks, bonds or other investments.

Options – purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. Investments in options are considered speculative. An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a “call option”) or sell (a “put option”) the underlying security or futures contract (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the “exercise price”) during a period of time or on a specified date. When the Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if the Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If the Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When the Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option). If an option purchased by the Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Swaps – using swaps can involve greater risks than if an Underlying Fund were to invest directly in the underlying securities or assets. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund’s losses and reducing the Underlying Fund’s opportunities for gains. Currently there are few central exchanges or markets for swap contracts, and therefore they may be less liquid than exchange-traded instruments. If a swap counterparty fails to meet its obligations under the contract, the Underlying Fund may lose money.

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows the volatility or variability of the Fund’s annual total returns over time and shows that Fund performance can change from year to year. The table shows the Fund’s average annual total returns for certain time periods compared to the returns of a comparable broad-based securities index. Remember, however, that past performance is not necessarily an indication of how the Fund will perform in the future. The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance contracts. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns – Class II Shares (Years Ended December 31,)

Highest Quarter: 9.40% – 3rd qtr of 2010
Lowest Quarter: -11.73% – 3rd qtr of 2011

The inception date for Class P shares is April 30, 2012. Pre-inception historical performance for Class P shares is based on the previous performance of Class II shares. Performance for Class P shares has not been adjusted to reflect that share class’s lower expenses than those of Class II shares.

Average Annual Total Returns (For the Periods Ended December 31, 2019)

	1 year	5 years	10 years
Class II Shares	19.94%	6.66%	8.01%
Class P Shares	20.11%	6.82%	8.14%
Morningstar® Moderate Target Risk Index (reflects no deduction for fees or expenses)	19.04%	6.75%	7.72%

Tax Information

The dividends and distributions paid by the Fund to the insurance company separate accounts will consist of ordinary income, capital gains, or some combination of both. Because shares of the Fund must be purchased through separate accounts used to fund variable insurance contracts, such dividends and distributions will be exempt from current taxation by contract holders if left to accumulate within a separate account. Consult the variable insurance contract prospectus for additional tax information.

Payments to Broker-Dealers and Other Financial Intermediaries

This Fund is only offered as an underlying investment option for variable insurance contracts. The Fund and its related companies may make payments to the sponsoring insurance companies (or their affiliates) for distribution and/or other services, and to broker-dealers and other financial intermediaries that distribute the variable insurance contracts. These payments may create a conflict of interest by influencing the insurance companies to include the Fund as an underlying investment option in the variable insurance contracts, and by influencing the broker-dealers and other financial intermediaries to distribute variable insurance contracts that include the Fund as an underlying investment option over other variable insurance contracts or to otherwise recommend the selection of the Fund as an underlying investment option by contract owners instead of other funds that also may be available investment options. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATE FUND

Objective

The NVIT Investor Destinations Moderate Fund (“Moderate Fund” or the “Fund”) seeks a high level of total return consistent with a moderate level of risk as compared to other Investor Destinations Funds.

Fees and Expenses

This table describes the fees and expenses you may pay when buying and holding shares of the Fund. Sales charges and other expenses that may be imposed by variable insurance contracts are not included. If these charges were reflected, the expenses listed below would be higher. See the variable insurance contract prospectus.

	Class II Shares	Class P Shares
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
Management Fees	0.13%	0.13%
Distribution and/or Service (12b-1) Fees	0.25%	0.25%
Other Expenses	0.19%	0.04%
Acquired Fund Fees and Expenses	0.26%	0.26%
Total Annual Fund Operating Expenses	0.83%	0.68%

Example

This Example is intended to help you to compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example, however, does not include charges that are imposed by variable insurance contracts. If these charges were reflected, the expenses listed below would be higher.

This Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those time periods. It assumes a 5% return each year and no change in expenses, and any expense limitation or fee waivers that may apply for the periods indicated above under “Fees and Expenses.” Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class II Shares	\$85	\$265	\$460	\$1,025
Class P Shares	69	218	379	847

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 11.80% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a “fund-of-funds” that invests primarily in affiliated mutual funds representing a variety of asset classes. The Fund aims to provide diversification across major asset classes—U.S. stocks, international stocks and bonds—by investing primarily in mutual funds offered by Nationwide Variable Insurance Trust and affiliated or unaffiliated exchange-traded funds (“ETFs”) (each, an “Underlying Fund” or collectively, “Underlying Funds”), as well as a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”).

Each Underlying Fund invests directly in equity or fixed-income securities (including mortgage-backed securities), as appropriate to its investment objective and strategies. Many Underlying Funds are index funds, which means they seek to match the investment returns of specified stock or bond indices before the deduction of the Underlying Funds’ expenses. The Fund also invests in certain Underlying Funds that are not index funds. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Although the Fund seeks to provide diversification across major asset classes, the Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds or

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATE FUND (cont.)

the Nationwide Contract). However, the Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

The Fund pursues its objective for a high level of total return with a moderate level of risk by investing a majority of its assets in Underlying Funds that invest in equity securities, such as common stocks of U.S. and international companies (including smaller companies), that the investment adviser believes offer opportunities for capital growth, but also a considerable portion of its assets in Underlying Funds that invest in bonds (including mortgage-backed securities) in order to generate investment income. Consistent with this investment strategy, as of the date of this Prospectus, the Fund allocates approximately 37% of its net assets in U.S. stocks, approximately 23% in international stocks and approximately 40% in bonds. The investment adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity. The Fund is designed for investors who have a lower tolerance for risk than more aggressive investors and who are seeking both capital growth and income. The Fund is also designed for investors who have a longer time horizon and who are willing to accept moderate short-term price fluctuations in exchange for potential longer-term returns.

Principal Risks

The Fund cannot guarantee that it will achieve its investment objective.

As with any fund, the value of the Fund's investments—and therefore, the value of Fund shares—may fluctuate. These changes may occur because of:

Management risk – the Fund is subject to the risk that the methods and analyses employed by its investment adviser, or by the investment advisers or subadvisers to the Underlying Funds, may not produce the desired results. This could cause the Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Fund-of-funds risk – there are certain risks associated with a structure whereby the Fund invests primarily in other mutual funds. These risks include that: (1) the Fund will indirectly pay a proportional share of the fees and expenses of the Underlying Funds in which it invests; (2) the Fund's investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more Underlying Funds fail to meet their investment objectives, the Fund's performance could be negatively affected; (3) the Fund is subject to different levels and combinations of risk based on its actual allocation among the various asset classes and Underlying Funds. The potential impact of the risks related to an asset class depends on the size of the

Fund's investment allocation to it; (4) Nationwide Fund Advisors' (the "Adviser") evaluations and allocation among asset classes and Underlying Funds may be incorrect; (5) the Adviser may add or delete Underlying Funds, or alter the Fund's asset allocation, at its discretion. Changes to the Fund's Underlying Funds or allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss; and (6) in selecting the Underlying Funds in which the Fund invests, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees from affiliated Underlying Funds and, therefore, has an incentive to invest the Fund's assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). To the extent that the Fund invests in the Nationwide Contract, Nationwide Life Insurance Company, an affiliate of the investment adviser, also earns money. Notwithstanding the foregoing, the Adviser has a fiduciary duty to the Fund and must act in the best interest of the Fund.

Exchange-traded funds risk – when the Fund invests in an exchange-traded fund ("ETF"), you will indirectly bear fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. In addition, the Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). The Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted for a number of reasons.

Market risk – the risk that one or more markets in which an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably.

Equity securities risk – stock markets are volatile. The price of an equity security fluctuates based on changes in a company's financial condition and overall market and economic conditions.

Foreign securities risk – foreign securities may be more volatile, harder to price and less liquid than U.S. securities. The prices of foreign securities may be further affected by other factors, such as changes in the exchange rates between the U.S. dollar and the currencies in which the securities are traded.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATE FUND (cont.)

Smaller company risk – smaller companies are usually less stable in price and less liquid than larger, more established companies. Smaller companies are more vulnerable than larger companies to adverse business and economic developments and may have more limited resources. Therefore, they generally involve greater risk.

Fixed-income securities risk – investments in fixed-income securities, such as bonds, subject the Fund to interest rate risk, credit risk and prepayment and call risk, which may affect the value of your investment. Interest rate risk is the risk that the value of fixed-income securities will decline when interest rates rise. Prices of longer-term securities generally change more in response to interest rate changes than prices of shorter-term securities. To the extent an Underlying Fund invests a substantial portion of its assets in debt securities with longer-term maturities, rising interest rates are more likely to cause periods of increased volatility and redemptions, and may cause the value of the Fund's investments to decline significantly. Currently, interest rates are at or near historic lows, which may increase an Underlying Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Credit risk is the risk that the issuer of a bond may default if it is unable to pay interest or principal when due. If an issuer defaults, the Underlying Fund, and therefore the Fund, may lose money. Changes in a bond issuer's credit rating or the market's perceptions of an issuer's creditworthiness also may affect the value of a bond. Prepayment and call risk is the risk that certain debt securities will be paid off by the issuer more quickly than anticipated. If this occurs, an Underlying Fund may be required to invest the proceeds in securities with lower yields.

Liquidity risk – when there is little or no active trading market for specific types of securities or instruments, it can become more difficult to sell the securities or instruments at or near their perceived value. An inability to sell a portfolio position can adversely affect an Underlying Fund's value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk also includes the risk that an Underlying Fund will experience significant net redemptions of its shares at a time when it cannot find willing buyers for its portfolio securities or instruments or can sell its portfolio securities or instruments only at a material loss. To meet redemption requests, an Underlying Fund may be forced to sell other securities or instruments that are more liquid, but at unfavorable times and conditions. Investments in foreign securities tend to have more exposure to liquidity risk than domestic securities.

Mortgage-backed securities risk – mortgage-backed securities generally are subject to the same types of risk that apply to other fixed-income securities, such as interest

rate risk, credit risk, and prepayment and call risk. Mortgage-backed securities also are subject to extension risk, which is the risk that when interest rates rise, certain mortgage-backed securities will be paid in full by the issuer more slowly than anticipated. This can cause the market value of the security to fall because the market may view its interest rate as low for a longer-term investment. Through its investments in mortgage-backed securities, an Underlying Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans, which are loans made to borrowers with weakened credit histories, generally have higher default rates than loans that meet government underwriting requirements.

Index fund risk – an Underlying Fund that seeks to match the performance of an index does not use defensive strategies or attempt to reduce its exposure to poorly performing securities. Further, correlation between an Underlying Fund's performance and that of the index may be negatively affected by the Underlying Fund's expenses, changes in the composition of the index, and the timing of purchase and redemption of Underlying Fund shares.

Limited portfolio holdings risk – because the Fund may hold large positions in an Underlying Fund or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on the Fund's value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

Derivatives risk – derivatives may be volatile and may involve significant risks. The underlying security, commodity, measure or other instrument on which a derivative is based, or the derivative itself, may not perform as expected. Normally derivatives involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing the Fund's or Underlying Fund's opportunities for gains. Some derivatives have the potential for unlimited loss, including a loss that may be greater than the amount invested. They also present default risks if the counterparty to a derivatives contract fails to fulfill its obligations to the Fund or Underlying Fund. Certain derivatives held by a Fund or Underlying Fund may be illiquid, making it difficult to close out an unfavorable position.

Futures – the prices of futures contracts typically are more volatile than those of stocks and bonds. Small movements in the values of the assets or measures underlying futures contracts can cause disproportionately larger losses to the Fund or an Underlying Fund. While futures may be more

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATE FUND (cont.)

liquid than other types of derivatives, they may experience periods when they are less liquid than stocks, bonds or other investments.

Options – purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. Investments in options are considered speculative. An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a “call option”) or sell (a “put option”) the underlying security or futures contract (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the “exercise price”) during a period of time or on a specified date. When the Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if the Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If the Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When the Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option). If an option purchased by the Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Swaps – using swaps can involve greater risks than if an Underlying Fund were to invest directly in the underlying securities or assets. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund’s losses and reducing the Underlying Fund’s opportunities for gains. Currently there are few central exchanges or markets for swap contracts, and therefore they may be less liquid than exchange-traded instruments. If a swap counterparty fails to meet its obligations under the contract, the Underlying Fund may lose money.

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows the volatility or variability of the Fund’s annual total returns over time and shows that Fund performance can change from year to year. The table shows the Fund’s average annual total returns for certain time periods compared to the returns of a comparable broad-based securities index. Remember, however, that past performance is not necessarily an indication of how the Fund will perform in the future. The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance contracts. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns – Class II Shares (Years Ended December 31,)

Highest Quarter: 8.05% – 3rd qtr of 2010

Lowest Quarter: -9.76% – 3rd qtr of 2011

The inception date for Class P shares is April 30, 2012. Pre-inception historical performance for Class P shares is based on the previous performance of Class II shares. Performance for Class P shares has not been adjusted to reflect that share class’s lower expenses than those of Class II shares.

Average Annual Total Returns (For the Periods Ended December 31, 2019)

	1 year	5 years	10 years
Class II Shares	17.74%	6.02%	7.27%
Class P Shares	17.83%	6.17%	7.39%
Morningstar® Moderate Target Risk Index (reflects no deduction for fees or expenses)	19.04%	6.75%	7.72%

Tax Information

The dividends and distributions paid by the Fund to the insurance company separate accounts will consist of ordinary income, capital gains, or some combination of both. Because shares of the Fund must be purchased through separate accounts used to fund variable insurance contracts, such dividends and distributions will be exempt from current taxation by contract holders if left to accumulate within a separate account. Consult the variable insurance contract prospectus for additional tax information.

Payments to Broker-Dealers and Other Financial Intermediaries

This Fund is only offered as an underlying investment option for variable insurance contracts. The Fund and its related companies may make payments to the sponsoring insurance companies (or their affiliates) for distribution and/or other services, and to broker-dealers and other financial intermediaries that distribute the variable insurance contracts. These payments may create a conflict of interest by influencing the insurance companies to include the Fund as an underlying investment option in the variable insurance contracts, and by influencing the broker-dealers and other financial intermediaries to distribute variable insurance contracts that include the Fund as an underlying investment option over other variable insurance contracts or to otherwise recommend the selection of the Fund as an underlying investment option by contract owners instead of other funds that also may be available investment options. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS BALANCED FUND

Objective

The NVIT Investor Destinations Balanced Fund (“Balanced Fund” or the “Fund”) seeks a high level of total return through investment in both equity and fixed-income securities.

Fees and Expenses

This table describes the fees and expenses you may pay when buying and holding shares of the Fund. Sales charges and other expenses that may be imposed by variable insurance contracts are not included. If these charges were reflected, the expenses listed below would be higher. See the variable insurance contract prospectus.

	Class II Shares	Class P Shares
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
Management Fees	0.13%	0.13%
Distribution and/or Service (12b-1) Fees	0.25%	0.25%
Other Expenses	0.19%	0.04%
Acquired Fund Fees and Expenses	0.26%	0.26%
Total Annual Fund Operating Expenses	0.83%	0.68%

Example

This Example is intended to help you to compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example, however, does not include charges that are imposed by variable insurance contracts. If these charges were reflected, the expenses listed below would be higher.

This Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those time periods. It assumes a 5% return each year and no change in expenses, and any expense limitation or fee waivers that may apply for the periods indicated above under “Fees and Expenses.” Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class II Shares	\$85	\$265	\$460	\$1,025
Class P Shares	69	218	379	847

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 12.40% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a “fund-of-funds” that invests primarily in affiliated mutual funds representing a variety of asset classes. The Fund aims to provide diversification across major asset classes—U.S. stocks, international stocks and bonds—by investing primarily in mutual funds offered by Nationwide Variable Insurance Trust and affiliated or unaffiliated exchange-traded funds (“ETFs”) (each, an “Underlying Fund” or collectively, “Underlying Funds”), as well as a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”).

Each Underlying Fund invests directly in equity or fixed-income securities (including mortgage-backed securities), as appropriate to its investment objective and strategies. Many Underlying Funds are index funds, which means they seek to match the investment returns of specified stock or bond indices before the deduction of the Underlying Funds’ expenses. The Fund also invests in certain Underlying Funds that are not index funds. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Although the Fund seeks to provide diversification across major asset classes, the Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds or

FUND SUMMARY: NVIT INVESTOR DESTINATIONS BALANCED FUND (cont.)

the Nationwide Contract). However, the Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

The Fund pursues its objective for a high level of total return through investments in both equity and fixed-income securities by investing approximately equal amounts of its assets in Underlying Funds that invest in equity securities, such as common stocks of U.S. and international companies (including smaller companies), that the investment adviser believes offer opportunities for capital growth, and bonds (including mortgage-backed and asset-backed securities) in order to generate investment income. Under normal circumstances, the Balanced Fund normally invests at least 25% of its net assets in underlying funds that invest in senior fixed-income securities. Consistent with this investment strategy, as of the date of this Prospectus, the Fund allocates approximately 30% of its net assets in U.S. stocks, approximately 20% in international stocks and approximately 50% in bonds. The investment adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity. The Fund is designed for investors who have a lower tolerance for risk than more aggressive investors and who are seeking both capital growth and income. The Fund is also designed for investors who are willing to accept moderate short-term price fluctuations in exchange for potential longer-term returns.

Principal Risks

The Fund cannot guarantee that it will achieve its investment objective.

As with any fund, the value of the Fund's investments—and therefore, the value of Fund shares—may fluctuate. These changes may occur because of:

Management risk – the Fund is subject to the risk that the methods and analyses employed by its investment adviser, or by the investment advisers or subadvisers to the Underlying Funds, may not produce the desired results. This could cause the Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Fund-of-funds risk – there are certain risks associated with a structure whereby the Fund invests primarily in other mutual funds. These risks include that: (1) the Fund will indirectly pay a proportional share of the fees and expenses of the Underlying Funds in which it invests; (2) the Fund's investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more Underlying Funds fail to meet their investment objectives, the Fund's performance could be negatively affected; (3) the Fund is subject to different levels and combinations of

risk based on its actual allocation among the various asset classes and Underlying Funds. The potential impact of the risks related to an asset class depends on the size of the Fund's investment allocation to it; (4) Nationwide Fund Advisors' (the "Adviser") evaluations and allocation among asset classes and Underlying Funds may be incorrect; (5) the Adviser may add or delete Underlying Funds, or alter the Fund's asset allocation, at its discretion. Changes to the Fund's Underlying Funds or allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss; and (6) in selecting the Underlying Funds in which the Fund invests, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees from affiliated Underlying Funds and, therefore, has an incentive to invest the Fund's assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). To the extent that the Fund invests in the Nationwide Contract, Nationwide Life Insurance Company, an affiliate of the investment adviser, also earns money. Notwithstanding the foregoing, the Adviser has a fiduciary duty to the Fund and must act in the best interest of the Fund.

Exchange-traded funds risk – when the Fund invests in an exchange-traded fund ("ETF"), you will indirectly bear fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. In addition, the Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). The Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted for a number of reasons.

Market risk – the risk that one or more markets in which an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably.

Equity securities risk – stock markets are volatile. The price of an equity security fluctuates based on changes in a company's financial condition and overall market and economic conditions.

Foreign securities risk – foreign securities may be more volatile, harder to price and less liquid than U.S. securities. The prices of foreign securities may be further affected by

FUND SUMMARY: NVIT INVESTOR DESTINATIONS BALANCED FUND (cont.)

other factors, such as changes in the exchange rates between the U.S. dollar and the currencies in which the securities are traded.

Smaller company risk – smaller companies are usually less stable in price and less liquid than larger, more established companies. Smaller companies are more vulnerable than larger companies to adverse business and economic developments and may have more limited resources. Therefore, they generally involve greater risk.

Fixed-income securities risk – investments in fixed-income securities, such as bonds, subject the Fund to interest rate risk, credit risk and prepayment and call risk, which may affect the value of your investment. Interest rate risk is the risk that the value of fixed-income securities will decline when interest rates rise. Prices of longer-term securities generally change more in response to interest rate changes than prices of shorter-term securities. To the extent an Underlying Fund invests a substantial portion of its assets in debt securities with longer-term maturities, rising interest rates are more likely to cause periods of increased volatility and redemptions, and may cause the value of the Fund's investments to decline significantly. Currently, interest rates are at or near historic lows, which may increase an Underlying Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Credit risk is the risk that the issuer of a bond may default if it is unable to pay interest or principal when due. If an issuer defaults, the Underlying Fund, and therefore the Fund, may lose money. Changes in a bond issuer's credit rating or the market's perceptions of an issuer's creditworthiness also may affect the value of a bond. Prepayment and call risk is the risk that certain debt securities will be paid off by the issuer more quickly than anticipated. If this occurs, an Underlying Fund may be required to invest the proceeds in securities with lower yields.

Liquidity risk – when there is little or no active trading market for specific types of securities or instruments, it can become more difficult to sell the securities or instruments at or near their perceived value. An inability to sell a portfolio position can adversely affect an Underlying Fund's value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk also includes the risk that an Underlying Fund will experience significant net redemptions of its shares at a time when it cannot find willing buyers for its portfolio securities or instruments or can sell its portfolio securities or instruments only at a material loss. To meet redemption requests, an Underlying Fund may be forced to sell other securities or instruments that are more liquid, but at unfavorable times and conditions. Investments in foreign securities tend to have more exposure to liquidity risk than domestic securities.

Mortgage-backed and asset-backed securities risks – these securities generally are subject to the same types of risk that apply to other fixed-income securities, such as interest rate risk, credit risk, and prepayment and call risk. Mortgage-backed securities also are subject to extension risk, which is the risk that when interest rates rise, certain mortgage-backed securities will be paid in full by the issuer more slowly than anticipated. This can cause the market value of the security to fall because the market may view its interest rate as low for a longer-term investment. Through its investments in mortgage-backed securities, an Underlying Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans, which are loans made to borrowers with weakened credit histories, generally have higher default rates than loans that meet government underwriting requirements. The credit quality of most asset-backed securities depends primarily on the credit quality of the assets underlying such securities, how well the entity issuing the security is insulated from the credit risk of the originator or any other affiliated entities, and the amount and quality of any credit enhancement of the securities.

Index fund risk – an Underlying Fund that seeks to match the performance of an index does not use defensive strategies or attempt to reduce its exposure to poorly performing securities. Further, correlation between an Underlying Fund's performance and that of the index may be negatively affected by the Underlying Fund's expenses, changes in the composition of the index, and the timing of purchase and redemption of Underlying Fund shares.

Limited portfolio holdings risk – because the Fund may hold large positions in an Underlying Fund or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on the Fund's value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

Derivatives risk – derivatives may be volatile and may involve significant risks. The underlying security, commodity, measure or other instrument on which a derivative is based, or the derivative itself, may not perform as expected. Normally derivatives involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing the Fund's or Underlying Fund's opportunities for gains. Some derivatives have the potential for unlimited loss, including a loss that may be greater than the amount invested. They also present default risks if the counterparty to a derivatives contract fails to fulfill its obligations to the Fund or

FUND SUMMARY: NVIT INVESTOR DESTINATIONS BALANCED FUND (cont.)

Underlying Fund. Certain derivatives held by a Fund or Underlying Fund may be illiquid, making it difficult to close out an unfavorable position.

Futures – the prices of futures contracts typically are more volatile than those of stocks and bonds. Small movements in the values of the assets or measures underlying futures contracts can cause disproportionately larger losses to the Fund or an Underlying Fund. While futures may be more liquid than other types of derivatives, they may experience periods when they are less liquid than stocks, bonds or other investments.

Options – purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. Investments in options are considered speculative. An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a “call option”) or sell (a “put option”) the underlying security or futures contract (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the “exercise price”) during a period of time or on a specified date. When the Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if the Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If the Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When the Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option). If an option purchased by the Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Swaps – using swaps can involve greater risks than if an Underlying Fund were to invest directly in the underlying securities or assets. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund’s losses and reducing the Underlying Fund’s opportunities for gains. Currently there are few central exchanges or markets for swap contracts, and therefore

they may be less liquid than exchange-traded instruments. If a swap counterparty fails to meet its obligations under the contract, the Underlying Fund may lose money.

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows the volatility or variability of the Fund’s annual total returns over time and shows that Fund performance can change from year to year. The table shows the Fund’s average annual total returns for certain time periods compared to the returns of a comparable broad-based securities index. Remember, however, that past performance is not necessarily an indication of how the Fund will perform in the future. The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance contracts. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns – Class II Shares (Years Ended December 31,)

Highest Quarter: 6.93% – 3rd qtr of 2010

Lowest Quarter: -7.75% – 3rd qtr of 2011

The inception date for Class P shares is April 30, 2012. Pre-inception historical performance for Class P shares is based on the previous performance of Class II shares. Performance for Class P shares has not been adjusted to reflect that share class’s lower expenses than those of Class II shares.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS BALANCED FUND (cont.)

Average Annual Total Returns (For the Periods Ended December 31, 2019)

	1 year	5 years	10 years
Class II Shares	15.34%	5.29%	6.41%
Class P Shares	15.51%	5.46%	6.53%
Morningstar® Moderate Target Risk Index (reflects no deduction for fees or expenses)	19.04%	6.75%	7.72%

Tax Information

The dividends and distributions paid by the Fund to the insurance company separate accounts will consist of ordinary income, capital gains, or some combination of both. Because shares of the Fund must be purchased through separate accounts used to fund variable insurance contracts, such dividends and distributions will be exempt from current taxation by contract holders if left to accumulate within a separate account. Consult the variable insurance contract prospectus for additional tax information.

Payments to Broker-Dealers and Other Financial Intermediaries

This Fund is only offered as an underlying investment option for variable insurance contracts. The Fund and its related companies may make payments to the sponsoring insurance companies (or their affiliates) for distribution and/or other services, and to broker-dealers and other financial intermediaries that distribute the variable insurance contracts. These payments may create a conflict of interest by influencing the insurance companies to include the Fund as an underlying investment option in the variable insurance contracts, and by influencing the broker-dealers and other financial intermediaries to distribute variable insurance contracts that include the Fund as an underlying investment option over other variable insurance contracts or to otherwise recommend the selection of the Fund as an underlying investment option by contract owners instead of other funds that also may be available investment options. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY CONSERVATIVE FUND

Objective

The NVIT Investor Destinations Moderately Conservative Fund (“Moderately Conservative Fund” or the “Fund”) seeks a high level of total return consistent with a moderately conservative level of risk.

Fees and Expenses

This table describes the fees and expenses you may pay when buying and holding shares of the Fund. Sales charges and other expenses that may be imposed by variable insurance contracts are not included. If these charges were reflected, the expenses listed below would be higher. See the variable insurance contract prospectus.

	Class II Shares	Class P Shares
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
Management Fees	0.13%	0.13%
Distribution and/or Service (12b-1) Fees	0.25%	0.25%
Other Expenses	0.20%	0.05%
Acquired Fund Fees and Expenses	0.24%	0.24%
Total Annual Fund Operating Expenses	0.82%	0.67%

Example

This Example is intended to help you to compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example, however, does not include charges that are imposed by variable insurance contracts. If these charges were reflected, the expenses listed below would be higher.

This Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those time periods. It assumes a 5% return each year and no change in expenses, and any expense limitation or fee waivers that may apply for the periods indicated above under “Fees and Expenses.” Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class II Shares	\$84	\$262	\$455	\$1,014
Class P Shares	68	214	373	835

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 8.43% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a “fund-of-funds” that invests primarily in affiliated mutual funds representing a variety of asset classes. The Fund aims to provide diversification across major asset classes—U.S. stocks, international stocks and bonds—by investing primarily in mutual funds offered by Nationwide Variable Insurance Trust and affiliated or unaffiliated exchange-traded funds (“ETFs”) (each, an “Underlying Fund” or collectively, “Underlying Funds”), as well as a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”).

Each Underlying Fund invests directly in equity or fixed-income securities (including mortgage-backed securities), as appropriate to its investment objective and strategies. Many Underlying Funds are index funds, which means they seek to match the investment returns of specified stock or bond indices before the deduction of the Underlying Funds’ expenses. The Fund also invests in certain Underlying Funds that are not index funds. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Although the Fund seeks to provide diversification across major asset classes, the Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds or

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY CONSERVATIVE FUND (cont.)

the Nationwide Contract). However, the Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

The Fund pursues its objective for a high level of total return with a moderately conservative level of risk by investing a majority of its assets in Underlying Funds that invest in fixed-income securities, such as bonds, mortgage-backed securities and asset-backed securities, in order to generate investment income, but also a considerable portion of its assets in Underlying Funds that invest in equity securities, such as common stocks of U.S. and international companies (including smaller companies), that the investment adviser believes offer opportunities for capital growth. Consistent with this investment strategy, as of the date of this Prospectus, the Fund allocates approximately 60% of its net assets in bonds, approximately 25% in U.S. stocks, and approximately 15% in international stocks. The investment adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity. The Fund is designed for investors who have a lower tolerance for risk and whose primary goal is income and secondary goal is growth. The Fund is also designed for investors who have a shorter time horizon or who are willing to accept some amount of market volatility in exchange for greater potential income and growth.

Principal Risks

The Fund cannot guarantee that it will achieve its investment objective.

As with any fund, the value of the Fund's investments—and therefore, the value of Fund shares—may fluctuate. These changes may occur because of:

Management risk – the Fund is subject to the risk that the methods and analyses employed by its investment adviser, or by the investment advisers or subadvisers to the Underlying Funds, may not produce the desired results. This could cause the Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Fund-of-funds risk – there are certain risks associated with a structure whereby the Fund invests primarily in other mutual funds. These risks include that: (1) the Fund will indirectly pay a proportional share of the fees and expenses of the Underlying Funds in which it invests; (2) the Fund's investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more Underlying Funds fail to meet their investment objectives, the Fund's performance could be negatively affected; (3) the Fund is subject to different levels and combinations of risk based on its actual allocation among the various asset classes and Underlying Funds. The potential impact of the

risks related to an asset class depends on the size of the Fund's investment allocation to it; (4) Nationwide Fund Advisors' (the "Adviser") evaluations and allocation among asset classes and Underlying Funds may be incorrect; (5) the Adviser may add or delete Underlying Funds, or alter the Fund's asset allocation, at its discretion. Changes to the Fund's Underlying Funds or allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss; and (6) in selecting the Underlying Funds in which the Fund invests, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees from affiliated Underlying Funds and, therefore, has an incentive to invest the Fund's assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). To the extent that the Fund invests in the Nationwide Contract, Nationwide Life Insurance Company, an affiliate of the investment adviser, also earns money. Notwithstanding the foregoing, the Adviser has a fiduciary duty to the Fund and must act in the best interest of the Fund.

Exchange-traded funds risk – when the Fund invests in an exchange-traded fund ("ETF"), you will indirectly bear fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. In addition, the Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). The Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted for a number of reasons.

Market risk – the risk that one or more markets in which an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably.

Equity securities risk – stock markets are volatile. The price of an equity security fluctuates based on changes in a company's financial condition and overall market and economic conditions.

Foreign securities risk – foreign securities may be more volatile, harder to price and less liquid than U.S. securities. The prices of foreign securities may be further affected by

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY CONSERVATIVE FUND (cont.)

other factors, such as changes in the exchange rates between the U.S. dollar and the currencies in which the securities are traded.

Fixed-income securities risk – investments in fixed-income securities, such as bonds, subject the Fund to interest rate risk, credit risk and prepayment and call risk, which may affect the value of your investment. Interest rate risk is the risk that the value of fixed-income securities will decline when interest rates rise. Prices of longer-term securities generally change more in response to interest rate changes than prices of shorter-term securities. To the extent an Underlying Fund invests a substantial portion of its assets in debt securities with longer-term maturities, rising interest rates are more likely to cause periods of increased volatility and redemptions, and may cause the value of the Fund's investments to decline significantly. Currently, interest rates are at or near historic lows, which may increase an Underlying Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Credit risk is the risk that the issuer of a bond may default if it is unable to pay interest or principal when due. If an issuer defaults, the Underlying Fund, and therefore the Fund, may lose money. Changes in a bond issuer's credit rating or the market's perceptions of an issuer's creditworthiness also may affect the value of a bond. Prepayment and call risk is the risk that certain debt securities will be paid off by the issuer more quickly than anticipated. If this occurs, an Underlying Fund may be required to invest the proceeds in securities with lower yields.

Liquidity risk – when there is little or no active trading market for specific types of securities or instruments, it can become more difficult to sell the securities or instruments at or near their perceived value. An inability to sell a portfolio position can adversely affect an Underlying Fund's value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk also includes the risk that an Underlying Fund will experience significant net redemptions of its shares at a time when it cannot find willing buyers for its portfolio securities or instruments or can sell its portfolio securities or instruments only at a material loss. To meet redemption requests, an Underlying Fund may be forced to sell other securities or instruments that are more liquid, but at unfavorable times and conditions. Investments in foreign securities tend to have more exposure to liquidity risk than domestic securities.

Mortgage-backed and asset-backed securities risks – these securities generally are subject to the same types of risk that apply to other fixed-income securities, such as interest rate risk, credit risk, and prepayment and call risk. Mortgage-backed securities also are subject to extension risk, which is the risk that when interest rates rise, certain

mortgage-backed securities will be paid in full by the issuer more slowly than anticipated. This can cause the market value of the security to fall because the market may view its interest rate as low for a longer-term investment. Through its investments in mortgage-backed securities, an Underlying Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans, which are loans made to borrowers with weakened credit histories, generally have higher default rates than loans that meet government underwriting requirements. The credit quality of most asset-backed securities depends primarily on the credit quality of the assets underlying such securities, how well the entity issuing the security is insulated from the credit risk of the originator or any other affiliated entities, and the amount and quality of any credit enhancement of the securities.

Index fund risk – an Underlying Fund that seeks to match the performance of an index does not use defensive strategies or attempt to reduce its exposure to poorly performing securities. Further, correlation between an Underlying Fund's performance and that of the index may be negatively affected by the Underlying Fund's expenses, changes in the composition of the index, and the timing of purchase and redemption of Underlying Fund shares.

Limited portfolio holdings risk – because the Fund may hold large positions in an Underlying Fund or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on the Fund's value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

Smaller company risk – smaller companies are usually less stable in price and less liquid than larger, more established companies. Smaller companies are more vulnerable than larger companies to adverse business and economic developments and may have more limited resources. Therefore, they generally involve greater risk.

Derivatives risk – derivatives may be volatile and may involve significant risks. The underlying security, commodity, measure or other instrument on which a derivative is based, or the derivative itself, may not perform as expected. Normally derivatives involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing the Fund's or Underlying Fund's opportunities for gains. Some derivatives have the potential for unlimited loss, including a loss that may be greater than the amount invested. They also present default risks if the counterparty to a derivatives contract fails to fulfill its obligations to the Fund or

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY CONSERVATIVE FUND (cont.)

Underlying Fund. Certain derivatives held by a Fund or Underlying Fund may be illiquid, making it difficult to close out an unfavorable position.

Futures – the prices of futures contracts typically are more volatile than those of stocks and bonds. Small movements in the values of the assets or measures underlying futures contracts can cause disproportionately larger losses to the Fund or an Underlying Fund. While futures may be more liquid than other types of derivatives, they may experience periods when they are less liquid than stocks, bonds or other investments.

Options – purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. Investments in options are considered speculative. An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a “call option”) or sell (a “put option”) the underlying security or futures contract (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the “exercise price”) during a period of time or on a specified date. When the Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if the Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If the Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When the Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option). If an option purchased by the Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Swaps – using swaps can involve greater risks than if an Underlying Fund were to invest directly in the underlying securities or assets. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund’s losses and reducing the Underlying Fund’s opportunities for gains. Currently there are few central exchanges or markets for swap contracts, and therefore

they may be less liquid than exchange-traded instruments. If a swap counterparty fails to meet its obligations under the contract, the Underlying Fund may lose money.

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows the volatility or variability of the Fund’s annual total returns over time and shows that Fund performance can change from year to year. The table shows the Fund’s average annual total returns for certain time periods compared to the returns of a comparable broad-based securities index. Remember, however, that past performance is not necessarily an indication of how the Fund will perform in the future. The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance contracts. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns – Class II Shares (Years Ended December 31,)

Highest Quarter: 5.92% – 1st qtr of 2019

Lowest Quarter: -5.54% – 3rd qtr of 2011

The inception date for Class P shares is April 30, 2012. Pre-inception historical performance for Class P shares is based on the previous performance of Class II shares. Performance for Class P shares has not been adjusted to reflect that share class’s lower expenses than those of Class II shares.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS MODERATELY CONSERVATIVE FUND (cont.)

Average Annual Total Returns (For the Periods Ended December 31, 2019)

	1 year	5 years	10 years
Class II Shares	13.48%	4.74%	5.73%
Class P Shares	13.67%	4.90%	5.84%
Morningstar® Moderately Conservative Target Risk Index (reflects no deduction for fees or expenses)	15.26%	5.55%	6.26%

Tax Information

The dividends and distributions paid by the Fund to the insurance company separate accounts will consist of ordinary income, capital gains, or some combination of both. Because shares of the Fund must be purchased through separate accounts used to fund variable insurance contracts, such dividends and distributions will be exempt from current taxation by contract holders if left to accumulate within a separate account. Consult the variable insurance contract prospectus for additional tax information.

Payments to Broker-Dealers and Other Financial Intermediaries

This Fund is only offered as an underlying investment option for variable insurance contracts. The Fund and its related companies may make payments to the sponsoring insurance companies (or their affiliates) for distribution and/or other services, and to broker-dealers and other financial intermediaries that distribute the variable insurance contracts. These payments may create a conflict of interest by influencing the insurance companies to include the Fund as an underlying investment option in the variable insurance contracts, and by influencing the broker-dealers and other financial intermediaries to distribute variable insurance contracts that include the Fund as an underlying investment option over other variable insurance contracts or to otherwise recommend the selection of the Fund as an underlying investment option by contract owners instead of other funds that also may be available investment options. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CONSERVATIVE FUND

Objective

The NVIT Investor Destinations Conservative Fund (“Conservative Fund” or the “Fund”) seeks a high level of total return consistent with a conservative level of risk as compared to other Investor Destinations Funds.

Fees and Expenses

This table describes the fees and expenses you may pay when buying and holding shares of the Fund. Sales charges and other expenses that may be imposed by variable insurance contracts are not included. If these charges were reflected, the expenses listed below would be higher. See the variable insurance contract prospectus.

	Class II Shares	Class P Shares
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)		
Management Fees	0.13%	0.13%
Distribution and/or Service (12b-1) Fees	0.25%	0.25%
Other Expenses	0.20%	0.05%
Acquired Fund Fees and Expenses	0.24%	0.24%
Total Annual Fund Operating Expenses	0.82%	0.67%

Example

This Example is intended to help you to compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example, however, does not include charges that are imposed by variable insurance contracts. If these charges were reflected, the expenses listed below would be higher.

This Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those time periods. It assumes a 5% return each year and no change in expenses, and any expense limitation or fee waivers that may apply for the periods indicated above under “Fees and Expenses.” Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class II Shares	\$84	\$262	\$455	\$1,014
Class P Shares	68	214	373	835

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 15.84% of the average value of its portfolio.

Principal Investment Strategies

The Fund is a “fund-of-funds” that invests primarily in affiliated mutual funds representing a variety of asset classes. The Fund aims to provide diversification across major asset classes—U.S. stocks, international stocks and bonds—by investing primarily in mutual funds offered by Nationwide Variable Insurance Trust and affiliated or unaffiliated exchange-traded funds (“ETFs”) (each, an “Underlying Fund” or collectively, “Underlying Funds”), as well as a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”).

Each Underlying Fund invests directly in equity or fixed-income securities (including mortgage-backed securities), as appropriate to its investment objective and strategies. Many Underlying Funds are index funds, which means they seek to match the investment returns of specified stock or bond indices before the deduction of the Underlying Funds’ expenses. The Fund also invests in certain Underlying Funds that are not index funds. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Although the Fund seeks to provide diversification across major asset classes, the Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds or

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CONSERVATIVE FUND (cont.)

the Nationwide Contract). However, the Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

The Fund pursues its objective for a high level of total return with a conservative level of risk by investing heavily in Underlying Funds that invest in fixed-income securities, such as bonds, mortgage-backed securities and asset-backed securities, and a relatively small portion of its assets in Underlying Funds that invest in equity securities, such as common stocks of U.S. and international companies (including smaller companies) that the investment adviser believes offer opportunities for capital growth. Consistent with this investment strategy, as of the date of this Prospectus, the Fund allocates approximately 80% of its net assets in bonds and approximately 20% in U.S. and international stocks. The investment adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity. The Fund is designed for investors who have a low tolerance for risk and whose primary goal is income, or who have a short time horizon.

Principal Risks

The Fund cannot guarantee that it will achieve its investment objective.

As with any fund, the value of the Fund's investments—and therefore, the value of Fund shares—may fluctuate. These changes may occur because of:

Management risk – the Fund is subject to the risk that the methods and analyses employed by its investment adviser, or by the investment advisers or subadvisers to the Underlying Funds, may not produce the desired results. This could cause the Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Fund-of-funds risk – there are certain risks associated with a structure whereby the Fund invests primarily in other mutual funds. These risks include that: (1) the Fund will indirectly pay a proportional share of the fees and expenses of the Underlying Funds in which it invests; (2) the Fund's investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more Underlying Funds fail to meet their investment objectives, the Fund's performance could be negatively affected; (3) the Fund is subject to different levels and combinations of risk based on its actual allocation among the various asset classes and Underlying Funds. The potential impact of the risks related to an asset class depends on the size of the Fund's investment allocation to it; (4) Nationwide Fund Advisors' (the "Adviser") evaluations and allocation among asset classes and Underlying Funds may be incorrect; (5)

the Adviser may add or delete Underlying Funds, or alter the Fund's asset allocation, at its discretion. Changes to the Fund's Underlying Funds or allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss; and (6) in selecting the Underlying Funds in which the Fund invests, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees from affiliated Underlying Funds and, therefore, has an incentive to invest the Fund's assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). To the extent that the Fund invests in the Nationwide Contract, Nationwide Life Insurance Company, an affiliate of the investment adviser, also earns money. Notwithstanding the foregoing, the Adviser has a fiduciary duty to the Fund and must act in the best interest of the Fund.

Exchange-traded funds risk – when the Fund invests in an exchange-traded fund ("ETF"), you will indirectly bear fees and expenses charged by the ETF in addition to the Fund's direct fees and expenses. In addition, the Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). The Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted for a number of reasons.

Market risk – the risk that one or more markets in which an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably.

Equity securities risk – stock markets are volatile. The price of an equity security fluctuates based on changes in a company's financial condition and overall market and economic conditions.

Fixed-income securities risk – investments in fixed-income securities, such as bonds, subject the Fund to interest rate risk, credit risk and prepayment and call risk, which may affect the value of your investment. Interest rate risk is the risk that the value of fixed-income securities will decline when interest rates rise. Prices of longer-term securities generally change more in response to interest rate changes than prices of shorter-term securities. To the extent an Underlying Fund invests a substantial portion of its assets in

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CONSERVATIVE FUND (cont.)

debt securities with longer-term maturities, rising interest rates are more likely to cause periods of increased volatility and redemptions, and may cause the value of the Fund's investments to decline significantly. Currently, interest rates are at or near historic lows, which may increase an Underlying Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Credit risk is the risk that the issuer of a bond may default if it is unable to pay interest or principal when due. If an issuer defaults, the Underlying Fund, and therefore the Fund, may lose money. Changes in a bond issuer's credit rating or the market's perceptions of an issuer's creditworthiness also may affect the value of a bond. Prepayment and call risk is the risk that certain debt securities will be paid off by the issuer more quickly than anticipated. If this occurs, an Underlying Fund may be required to invest the proceeds in securities with lower yields.

Liquidity risk – when there is little or no active trading market for specific types of securities or instruments, it can become more difficult to sell the securities or instruments at or near their perceived value. An inability to sell a portfolio position can adversely affect an Underlying Fund's value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk also includes the risk that an Underlying Fund will experience significant net redemptions of its shares at a time when it cannot find willing buyers for its portfolio securities or instruments or can sell its portfolio securities or instruments only at a material loss. To meet redemption requests, an Underlying Fund may be forced to sell other securities or instruments that are more liquid, but at unfavorable times and conditions. Investments in foreign securities tend to have more exposure to liquidity risk than domestic securities.

Mortgage-backed and asset-backed securities risks – these securities generally are subject to the same types of risk that apply to other fixed-income securities, such as interest rate risk, credit risk, and prepayment and call risk. Mortgage-backed securities also are subject to extension risk, which is the risk that when interest rates rise, certain mortgage-backed securities will be paid in full by the issuer more slowly than anticipated. This can cause the market value of the security to fall because the market may view its interest rate as low for a longer-term investment. Through its investments in mortgage-backed securities, an Underlying Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans, which are loans made to borrowers with weakened credit histories, generally have higher default rates than loans that meet government underwriting requirements. The credit quality of most asset-backed securities depends primarily on the credit quality of

the assets underlying such securities, how well the entity issuing the security is insulated from the credit risk of the originator or any other affiliated entities, and the amount and quality of any credit enhancement of the securities.

Foreign securities risk – foreign securities may be more volatile, harder to price and less liquid than U.S. securities. The prices of foreign securities may be further affected by other factors, such as changes in the exchange rates between the U.S. dollar and the currencies in which the securities are traded.

Smaller company risk – smaller companies are usually less stable in price and less liquid than larger, more established companies. Smaller companies are more vulnerable than larger companies to adverse business and economic developments and may have more limited resources. Therefore, they generally involve greater risk.

Index fund risk – an Underlying Fund that seeks to match the performance of an index does not use defensive strategies or attempt to reduce its exposure to poorly performing securities. Further, correlation between an Underlying Fund's performance and that of the index may be negatively affected by the Underlying Fund's expenses, changes in the composition of the index, and the timing of purchase and redemption of Underlying Fund shares.

Limited portfolio holdings risk – because the Fund may hold large positions in an Underlying Fund or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on the Fund's value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

Derivatives risk – derivatives may be volatile and may involve significant risks. The underlying security, commodity, measure or other instrument on which a derivative is based, or the derivative itself, may not perform as expected. Normally derivatives involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing the Fund's or Underlying Fund's opportunities for gains. Some derivatives have the potential for unlimited loss, including a loss that may be greater than the amount invested. They also present default risks if the counterparty to a derivatives contract fails to fulfill its obligations to the Fund or Underlying Fund. Certain derivatives held by a Fund or Underlying Fund may be illiquid, making it difficult to close out an unfavorable position.

Futures – the prices of futures contracts typically are more volatile than those of stocks and bonds. Small movements in the values of the assets or measures underlying futures contracts can cause disproportionately larger losses to the

FUND SUMMARY: NVIT INVESTOR DESTINATIONS CONSERVATIVE FUND (cont.)

Fund or an Underlying Fund. While futures may be more liquid than other types of derivatives, they may experience periods when they are less liquid than stocks, bonds or other investments.

Options – purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. Investments in options are considered speculative. An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a “call option”) or sell (a “put option”) the underlying security or futures contract (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the “exercise price”) during a period of time or on a specified date. When the Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if the Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If the Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option’s exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When the Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the same (in the case of a put option). If an option purchased by the Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Swaps – using swaps can involve greater risks than if an Underlying Fund were to invest directly in the underlying securities or assets. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund’s losses and reducing the Underlying Fund’s opportunities for gains. Currently there are few central exchanges or markets for swap contracts, and therefore they may be less liquid than exchange-traded instruments. If a swap counterparty fails to meet its obligations under the contract, the Underlying Fund may lose money.

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows the volatility or variability of the Fund’s annual total returns over time and shows that Fund performance can change from year to year. The table shows the Fund’s average annual total returns for certain time periods compared to the returns of a comparable broad-based securities index. Remember, however, that past performance is not necessarily an indication of how the Fund will perform in the future. The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance contracts. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns – Class II Shares (Years Ended December 31,)

Highest Quarter: 4.00% – 1st qtr of 2019

Lowest Quarter: -2.11% – 4th qtr of 2018

The inception date for Class P shares is April 30, 2012. Pre-inception historical performance for Class P shares is based on the previous performance of Class II shares. Performance for Class P shares has not been adjusted to reflect that share class’s lower expenses than those of Class II shares.

Average Annual Total Returns (For the Periods Ended December 31, 2019)

	1 year	5 years	10 years
Class II Shares	9.53%	3.51%	4.02%
Class P Shares	9.65%	3.67%	4.14%
Morningstar® Conservative Target Risk Index (reflects no deduction for fees or expenses)	11.23%	4.05%	4.53%

Tax Information

The dividends and distributions paid by the Fund to the insurance company separate accounts will consist of ordinary income, capital gains, or some combination of both. Because shares of the Fund must be purchased through separate accounts used to fund variable insurance contracts, such dividends and distributions will be exempt from current taxation by contract holders if left to accumulate within a separate account. Consult the variable insurance contract prospectus for additional tax information.

Payments to Broker-Dealers and Other Financial Intermediaries

This Fund is only offered as an underlying investment option for variable insurance contracts. The Fund and its related companies may make payments to the sponsoring insurance companies (or their affiliates) for distribution and/or other services, and to broker-dealers and other financial intermediaries that distribute the variable insurance contracts. These payments may create a conflict of interest by influencing the insurance companies to include the Fund as an underlying investment option in the variable insurance contracts, and by influencing the broker-dealers and other financial intermediaries to distribute variable insurance contracts that include the Fund as an underlying investment option over other variable insurance contracts or to otherwise recommend the selection of the Fund as an underlying investment option by contract owners instead of other funds that also may be available investment options. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

HOW THE FUNDS INVEST: NVIT INVESTOR DESTINATIONS FUNDS

Objectives

The NVIT Investor Destinations Aggressive Fund (“Aggressive Fund”) seeks maximum growth of capital consistent with a more aggressive level of risk as compared to other Investor Destinations Funds.

The NVIT Investor Destinations Moderately Aggressive Fund (“Moderately Aggressive Fund”) seeks growth of capital, but also seeks income consistent with a moderately aggressive level of risk as compared to other Investor Destinations Funds.

The NVIT Investor Destinations Capital Appreciation Fund (“Capital Appreciation Fund”) seeks growth of capital, but also seeks income consistent with a less aggressive level of risk as compared to other Investor Destinations Funds.

The NVIT Investor Destinations Moderate Fund (“Moderate Fund”) seeks a high level of total return consistent with a moderate level of risk as compared to other Investor Destinations Funds.

The NVIT Investor Destinations Balanced Fund (“Balanced Fund”) seeks a high level of total return through investment in both equity and fixed-income securities.

The NVIT Investor Destinations Moderately Conservative Fund (“Moderately Conservative Fund”) seeks a high level of total return consistent with a moderately conservative level of risk.

The NVIT Investor Destinations Conservative Fund (“Conservative Fund”) seeks a high level of total return consistent with a conservative level of risk as compared to other Investor Destinations Funds.

These investment objectives may be changed by the Nationwide Variable Insurance Trust’s Board of Trustees (the “Trust” and “Board of Trustees,” respectively) without shareholder approval upon 60 days’ written notice to shareholders.

Purpose of the NVIT Investor Destinations Funds

The NVIT Investor Destinations Funds (“Funds” or “Investor Destinations Funds”) aim to provide various levels of potential capital appreciation and/or income at various levels of risk through diversification across major asset classes—U.S. stocks, international stocks and bonds, as applicable. Each of the seven Funds is designed to provide a different asset allocation option corresponding to different investment goals ranging from the highest potential for growth with the highest amount of tolerance for risk, to the lowest potential for growth with the lowest amount of tolerance for risk, and highest potential for income. Each Fund is a “fund-of-funds,” which means that each Fund seeks to achieve its particular level of risk/return by investing the majority of its assets in a professionally

selected mix of Underlying Funds and a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Contract”). Each of the Underlying Funds in turn invests in equity or fixed-income securities, as appropriate to its respective objective and strategies. Some Underlying Funds may use futures, swaps and options, which are derivatives, either to hedge against investment risks, to obtain exposure to certain securities or groups of securities, or otherwise to increase returns. Depending on its target risk level, each Fund invests different amounts in these asset classes and Underlying Funds to achieve its investment objective.

The Investor Destinations Funds are primarily designed:

- To help achieve an investor’s financial objectives through a professionally developed asset allocation program.
- To maximize long-term total returns at a given level of risk through broad diversification among several traditional asset classes.

In selecting a Fund, investors should consider their personal objectives, investment time horizons, risk tolerances, and financial circumstances.

Although the Funds seek to provide diversification across major asset classes, each Fund invests a significant portion of its assets in a small number of issuers (i.e., one or more Underlying Funds). However, each Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, most of the Underlying Funds in which each Fund invests are diversified.

Principal Investment Strategies

For each Investor Destinations Fund, Nationwide Fund Advisors (“NFA” or the “Adviser”) establishes an anticipated allocation among different asset classes appropriate for the particular Fund’s risk profile and individual strategies. The Adviser bases this decision on the expected return potential, the anticipated risks and the volatility of each asset class. Further, the Adviser evaluates how various combinations of these asset classes can best pursue each Investor Destinations Fund’s investment objective.

Shares of each Investor Destinations Fund are offered to separate accounts of Nationwide Life Insurance Company and Nationwide Life and Annuity Insurance Company (collectively, “Nationwide Life”) as an investment option under variable annuity contracts or variable life insurance policies (“Variable Insurance Contracts”) which contain certain guarantees. The Adviser and Nationwide Life are each wholly owned subsidiaries of Nationwide Mutual Insurance Company, which means that Nationwide Life is affiliated with the Adviser. Consequently, the Adviser’s allocations may take into account Nationwide Life’s considerations related to reduction of its investment risk and its ability to hedge its risk in issuing guarantees on

HOW THE FUNDS INVEST: NVIT INVESTOR DESTINATIONS FUNDS (cont.)

Variable Insurance Contracts. For additional information, please see “Fund Management – Investment Adviser” on page 49.

Once the asset allocation is determined, the Adviser selects the Underlying Funds (including the Nationwide Contract, where applicable) it believes most appropriate to represent the various asset classes. Where more than one Underlying Fund can be used for a single asset class, the Adviser also evaluates which Underlying Fund, or what combination of Underlying Funds, best represents the potential risks and benefits of that asset class. In selecting Underlying Funds, the Adviser considers a variety of factors in the context of current economic and market conditions, including the Underlying Fund’s investment strategies, risk profile and historical performance. The Adviser generally sells shares of Underlying Funds in order to meet target allocations or shareholder redemption activity.

About Asset Classes

An “Asset Class” is a specific category of assets or investments. Examples of asset classes are stocks, bonds, foreign securities and money market instruments. Within each asset class there may be several different types of assets. For example, a “stock” asset class may contain large-cap, mid-cap, and/or small-cap stocks; domestic or international stocks; and growth or value stocks. Each asset class, and each type of asset within that asset class, offers a different type of potential benefit and risk level. For example, “stock” assets may generally be expected to provide a higher potential growth rate, but may require a longer time horizon and more risk than you would expect from most “bond” assets. By combining these broad asset classes in different percentage combinations, each Investor Destinations Fund seeks to provide different levels of potential risk and rewards.

Set forth below are the asset classes in which each Investor Destinations Fund invests, as appropriate to its specific investment objective and risk profile:

U.S. Stocks

- **Large-Cap Stocks** – stocks issued by companies that have market capitalizations similar to those of companies included in the Russell 1000® Index, ranging from \$823.7 million to \$1.3 trillion as of December 31, 2019.
- **Mid-Cap Stocks** – stocks issued by companies that have market capitalizations similar to those of companies included in the S&P MidCap 400® Index, ranging from \$1.1 billion to \$12.6 billion as of December 31, 2019.
- **Small-Cap Stocks** – stocks issued by companies that have market capitalizations similar to those of companies included in the Russell 2000® Index, the largest of which was \$8.3 billion as of December 31, 2019.

International Stocks – stocks of larger capitalization companies from various industries whose primary trading markets are outside the United States, as represented in the MSCI Europe, Australasia and Far East Index (“MSCI EAFE® Index”).

Bonds – fixed-income and other debt securities that represent an obligation by the issuer to pay a specified rate of interest or income at specified times, such as corporate bonds, bonds issued by a government or its agencies, mortgage-backed securities or asset-backed securities. Bonds primarily include investment grade securities (i.e., rated in the four highest rating categories by a nationally recognized statistical rating organization, such as Moody’s, Standard & Poor’s and Fitch). Bonds may also include the Nationwide Contract, an unregistered fixed interest contract issued by Nationwide Life Insurance Company.

The Underlying Funds

Many of the Underlying Funds are index funds in that they seek to match, prior to the deduction of operating expenses, the performance of a particular stock or bond index. The Investor Destinations Funds also invest in certain Underlying Funds that are not index funds.

Although each Investor Destinations Fund strives to provide diversification across major asset classes, each Fund invests a significant portion of its assets in a small number of issuers (i.e., the Underlying Funds and Nationwide Contract). However, each Fund may invest directly in securities and derivatives in addition to investing in Underlying Funds. Further, the Underlying Funds in which the Fund invests generally are diversified.

Set forth below are the Underlying Funds that are eligible, as of the effective date of this Prospectus, to represent each asset class. The Adviser reserves the right to add, delete or change the Underlying Funds selected to represent the asset classes without notice to shareholders.

HOW THE FUNDS INVEST: NVIT INVESTOR DESTINATIONS FUNDS (cont.)

ASSET CLASS	UNDERLYING INVESTMENTS
Large-Cap Stocks	NVIT S&P 500 INDEX FUND. This Underlying Fund seeks to track the S&P 500® Index, an index maintained by Standard & Poor's that includes 500 U.S. large-cap companies.
	NATIONWIDE MAXIMUM DIVERSIFICATION U.S. CORE EQUITY ETF. This Underlying Fund, by employing a "passive management" (or indexing) approach, seeks to track the total return performance, before fees and expenses, of the TOBAM Maximum Diversification® USA Index, which includes large- and mid-capitalization common and preferred stocks of U.S. companies.
	NATIONWIDE RISK-BASED U.S. EQUITY ETF. This Underlying Fund, by employing a "passive management" (or indexing) approach, seeks to track the total return performance, before fees and expenses, of the R Risk-Based US Index, which consists of equity securities that have their primary listing in the United States.
	NATIONWIDE MULTI-CAP PORTFOLIO. This Underlying Fund seeks to incrementally exceed the performance of the U.S. stock market, as represented by the Russell 3000® Index, over a full market cycle. The Russell 3000® Index is composed of the 3,000 largest U.S. companies by market capitalization, as determined by the Frank Russell Company.
	NVIT MID CAP INDEX FUND. This Underlying Fund seeks to track the S&P MidCap 400® Index, an index which includes 400 common stocks issued by U.S. mid-cap companies.
Mid-Cap Stocks	NVIT MID CAP INDEX FUND. This Underlying Fund seeks to track the S&P MidCap 400® Index, an index which includes 400 common stocks issued by U.S. mid-cap companies.
Small-Cap Stocks	NVIT SMALL CAP INDEX FUND. This Underlying Fund seeks to track the Russell 2000® Index, an index which includes 2000 common stocks issued by U.S. small-cap companies.

ASSET CLASS	UNDERLYING INVESTMENTS
International Stocks	NVIT INTERNATIONAL INDEX FUND. This Underlying Fund seeks to track the MSCI Europe, Australasia and Far East Index (MSCI EAFE® Index), an index which includes stocks of companies located, or whose stocks are traded on exchanges, in developed countries overseas.
	NATIONWIDE RISK-BASED INTERNATIONAL EQUITY ETF. This Underlying Fund, by employing a "passive management" (or indexing) approach, seeks to track the total return performance, before fees and expenses, of the R Risk-Based International Index, which consists of common stocks with a primary listing on developed market exchanges outside of North America.
	NVIT EMERGING MARKETS FUND. This Underlying Fund seeks long-term capital growth by investing primarily in equity securities of companies located in emerging market countries.

HOW THE FUNDS INVEST: NVIT INVESTOR DESTINATIONS FUNDS (cont.)

ASSET CLASS	UNDERLYING INVESTMENTS
Bonds	<p>AMUNDI NVIT MULTI SECTOR BOND FUND. This Underlying Fund seeks to provide above average total return over a market cycle of three to five years by investing primarily in different types of fixed-income securities with few limitations as to credit quality, geography, maturity or sector.</p>
	<p>NVIT BOND INDEX FUND. This Underlying Fund seeks to track the Bloomberg Barclays U.S. Aggregate Bond Index, an index which includes a broad-based mix of U.S. investment grade bonds with maturities greater than one year.</p>
	<p>NATIONWIDE CORE PLUS BOND FUND. This Underlying Fund seeks maximum long-term total return, consistent with reasonable risk to principal, by investing primarily in investment grade debt securities of varying maturities.</p>
	<p>NATIONWIDE CONTRACT. The Nationwide Contract is an unregistered fixed interest contract with a stable principal value issued by Nationwide Life Insurance Company.</p>
	<p>NATIONWIDE INFLATION-PROTECTED SECURITIES FUND. This Underlying Fund seeks to provide inflation protection and income consistent with investment in inflation-indexed securities.</p>
	<p>NVIT SHORT TERM BOND FUND. This Underlying Fund seeks to provide a high level of current income while preserving capital and minimizing fluctuations in share value by investing primarily in U.S. government securities, mortgage- and asset-backed securities, commercial paper and corporate bonds that are investment grade.</p>

Please see the Appendix for additional information about each of the Underlying Funds in which the Funds may invest as of the effective date of this Prospectus.

HOW THE FUNDS INVEST: NVIT INVESTOR DESTINATIONS FUNDS (cont.)

The Adviser establishes an anticipated allocation among different asset classes appropriate for each Fund's risk profile and individual strategies. The Adviser bases this decision on the expected return potential, the anticipated risks and the volatility of each asset class. Within each asset class allocation, the Adviser selects the Underlying Funds, and the percentage of the Fund's assets that will be allocated to each such Underlying Fund.

The table below shows the approximate allocations for each Fund, stated as a percentage of the Fund's net assets as of the effective date of this Prospectus. However, due to market value fluctuations or other factors, actual allocations may vary over time. In addition, the asset class allocations themselves may change over time in order for each Fund to meet its respective objective or as economic and/or market conditions warrant.

Investors should be aware that the Adviser applies a long-term investment horizon with respect to each Fund, and therefore, allocation changes are not likely to be made in response to short-term market conditions. The Adviser reserves the right to add or delete asset classes or to change the allocations at any time and without notice. The Funds may also invest in other mutual funds or ETFs not identified in the Appendix, including unaffiliated mutual funds or ETFs that are chosen either to complement or replace the Underlying Funds.

Information concerning each Fund's actual allocations to Underlying Funds will be available in each Fund's Semiannual and Annual Report and on the Trust's internet site (nationwide.com/mutualfunds/nvit) from time to time.

	Aggressive Fund	Moderately Aggressive Fund	Capital Appreciation Fund	Moderate Fund	Balanced Fund	Moderately Conservative Fund	Conservative Fund
U.S. STOCKS¹	56%	50%	45%	37%	30%	25%	12%
INTERNATIONAL STOCKS	34%	30%	25%	23%	20%	15%	8%
BONDS	10%	20%	30%	40%	50%	60%	80%

¹ "U.S. Stocks" generally includes stocks of large-capitalization, mid-capitalization and small-capitalization companies with market capitalizations, in the aggregate, similar to companies in the Russell 3000® Index.

The Adviser is also the investment adviser of each Underlying Fund (except for the Nation wide Contract, which is issued and guaranteed by an affiliate of the Adviser). Because an investor is investing indirectly in the Underlying Funds through a Fund, he or she will pay a proportionate share of the applicable expenses of the Underlying Funds (including applicable management, administration and custodian fees), as well as the Fund's direct expenses. The Underlying Funds will not charge any front-end sales loads, contingent deferred sales charges or Rule 12b-1 fees.

RISKS OF INVESTING IN THE FUNDS

As with all mutual funds, investing in Nationwide Funds involves certain risks. There is no guarantee that a Fund will meet its investment objective or that a Fund will perform as it has in the past. Loss of money is a risk of investing in the Funds.

The following information relates to the principal risks of investing in the Funds, as identified in the “Fund Summary” and “How the Funds Invest” sections for each Fund. A Fund or an Underlying Fund may invest in or use other types of investments or strategies not shown below that do not represent principal strategies or raise principal risks. More information about these non-principal investments, strategies and risks is available in the Funds’ Statement of Additional Information (“SAI”).

Risks Associated with a Fund-of-Funds Structure

Fund-of-funds risk – there are certain risks associated with a structure whereby a Fund invests primarily in other mutual funds. These risks include the following:

- **Underlying Fund Expenses:** because each Fund owns shares of the Underlying Funds, shareholders of a Fund will indirectly pay a proportional share of the fees and expenses, including applicable management, administration and custodian fees, of the Underlying Funds in which the Funds invest. The Underlying Funds do not charge any front-end sales loads, contingent deferred sales charges or Rule 12b-1 fees.
- **Performance:** each Fund’s investment performance is directly tied to the performance of the Underlying Funds in which it invests. If one or more of the Underlying Funds fails to meet its investment objective, a Fund’s performance could be negatively affected. There can be no assurance that any Fund or Underlying Fund will achieve its investment objective.
- **Asset Allocation:** each Fund is subject to different levels and combinations of risk based on its actual allocation among the various asset classes and Underlying Funds. Each Fund will be affected to varying degrees by stock and bond market risks, among others. The potential impact of the risks related to an asset class depends on the size of a Fund’s investment allocation to it.
- **Strategy:** there is the risk that the Adviser’s evaluations and allocation among asset classes and Underlying Funds may be incorrect. Further, the Adviser may add or delete Underlying Funds, or alter a Fund’s asset allocation at its discretion. A material change in the Underlying Funds selected or in asset allocation (or the lack thereof) could affect both the level of risk and the potential for gain or loss.
- **Conflict of Interest:** the Adviser has the authority to select and replace Underlying Funds. In doing so, the Adviser is subject to a conflict of interest because the Adviser is also the investment adviser to most, if not all, of the Underlying Funds. The Adviser receives advisory fees

from affiliated Underlying Funds and, therefore, has an incentive to invest the Funds’ assets in affiliated Underlying Funds instead of unaffiliated Underlying Funds. In addition, the Adviser might have an interest in making an investment in an affiliated Underlying Fund, or in maintaining an existing investment in an affiliated Underlying Fund, in order to benefit that affiliated Underlying Fund (for example, by assisting the affiliated Underlying Fund in achieving or maintaining scale). The Nationwide Contract also earns money for Nationwide Life Insurance Company (“Nationwide Life”), the Adviser’s affiliate. Notwithstanding the foregoing, the Adviser has a fiduciary duty to each of the Funds and must act in the best interest of the Funds.

Exchange-traded funds risk – when a Fund invests in an exchange-traded fund (“ETF”), you will indirectly bear fees and expenses charged by the ETF in addition to a Fund’s direct fees and expenses. In addition, a Fund may be affected by losses of the ETF and the level of risk arising from the investment practices of the ETF (such as the use of leverage by the ETF). A Fund has no control over the investments and related risks taken by the ETF in which it invests. Additionally, investments in ETFs are also subject to the following risks: (i) the market price of an ETF’s shares may trade above or below their net asset value; (ii) an active trading market for an ETF’s shares may not develop or be maintained; or (iii) trading of an ETF’s shares may be halted for a number of reasons.

Limited portfolio holdings risk – because a Fund may hold large positions in a small number of Underlying Funds or the Nationwide Contract, an increase or decrease in the value of such securities may have a greater impact on a Fund’s value and total return. Funds that invest in a relatively small number of securities may be subject to greater volatility than a more diversified fund.

The Nationwide Contract is a fixed interest contract issued by Nationwide Life. The Nationwide Contract has a stable principal value and pays a fixed rate of interest to each Fund that invests in the contract, which is currently adjusted on a quarterly basis. If Nationwide Life becomes unable to pay interest or repay principal under the contract, a Fund may lose money. Because the entire contract is issued by a single issuer, the financial health of such issuer may have a greater impact on the value of a Fund that invests in it.

Management risk – each Fund is subject to the risk that the methods and analyses employed by a Fund’s investment adviser, or by an Underlying Fund’s investment adviser or subadviser(s), may not produce the desired results. This could cause a Fund to lose value or its results to lag those of relevant benchmarks or other funds with similar objectives.

Market risk – market risk is the risk that one or more markets in which a Fund or an Underlying Fund invests will go down in value, including the possibility that the markets will go down sharply and unpredictably. In particular,

RISKS OF INVESTING IN THE FUNDS (cont.)

market risk, including political, regulatory, market, economic and social developments, and developments that impact specific economic sectors, industries or segments of the market, can affect the value of a Fund's or an Underlying Fund's investments. In addition, turbulence in financial markets and reduced liquidity in the markets may negatively affect many issuers, which could adversely affect a Fund or an Underlying Fund. These risks may be magnified if certain social, political, economic and other conditions and events (such as natural disasters, epidemics and pandemics, terrorism, conflicts and social unrest) adversely interrupt the global economy; in these and other circumstances, such events or developments might affect companies worldwide and therefore can affect the value of a Fund's or an Underlying Fund's investments.

Risks Associated with U.S. and International Stocks

Equity securities risk – the possibility that an Underlying Fund could lose value if the individual equity securities in which the Underlying Fund has invested and/or the overall stock markets in which the stocks trade decline in price. Stocks and stock markets may experience short-term volatility (price fluctuation) as well as extended periods of decline or little growth. Individual stocks are affected by many factors, including:

- corporate earnings;
- production;
- management and
- sales and market trends, including investor demand for a particular type of stock, such as growth or value stocks, small- or large-capitalization stocks, or stocks within a particular industry.

Smaller company risk – in general, stocks of smaller and medium-sized companies (including micro- and mid-cap companies) trade in lower volumes, may be less liquid, and are subject to greater or more unpredictable price changes than stocks of large-cap companies or the market overall. Smaller companies may have limited product lines or markets, be less financially secure than larger companies or depend on a smaller number of key personnel. If adverse developments occur, such as due to management changes or product failures, a Fund's investment in a smaller company may lose substantial value. Investing in smaller companies (including micro- and mid-cap companies) requires a longer-term investment view and may not be appropriate for all investors.

Risks Associated with Fixed-Income Securities (Bonds)

Interest rate risk – increases in interest rates may decrease the value of debt securities held by an Underlying Fund. In general, prices of fixed-income securities decline when interest rates rise and increase when interest rates fall.

Typically, the longer the maturity of a debt security, the more sensitive the debt security's price will be to interest rate changes. Currently, interest rates are at or near historic lows, which may increase the Fund's exposure to the risks associated with rising interest rates. Recent and potential future changes in government policy may affect interest rates.

Floating- and variable-rate securities – floating-rate securities have interest rates that vary with changes to a specific measure, such as the Treasury bill rate. Variable-rate securities have interest rates that change at preset times based on the specific measure. Some floating- and variable-rate securities may be callable by the issuer, meaning that they can be paid off before their maturity date and the proceeds may be required to be invested in lower yielding securities that reduce the Fund's or Underlying Fund's income. Like other fixed-income securities, floating- and variable-rate securities are subject to interest rate risk.

Inflation – the risk to investments caused by market expectations of higher prices for goods and services. Inflationary expectations are generally associated with higher interest rates and, accordingly, higher yields and lower prices on fixed-rate debt securities. Because inflation reduces the purchasing power of income produced by existing fixed-rate debt securities, such as bonds and notes, the prices at which these securities trade will be reduced to compensate for the fact that the income they produce is worth less. This potential decrease in market value would be the measure of the inflation risk incurred by a Fund.

Credit risk – the risk that the issuer of a debt security may default if it is unable to make required interest payments and/or principal repayments when they are due. If an issuer defaults, the Fund may lose money. The degree of credit risk depends on both the financial condition of the issuer and the terms of the obligation. Changes in an issuer's credit rating or the market's perception of an issuer's credit risk can adversely affect the prices of the securities an Underlying Fund owns. A corporate event such as a restructuring, merger, leveraged buyout, takeover, or similar action may cause a decline in market value of an issuer's securities or credit quality of its bonds due to factors including an unfavorable market response or a resulting increase in the company's debt. Added debt may reduce significantly the credit quality and market value of a company's bonds, and may thereby affect the value of its equity securities as well. High-yield bonds, which are rated below investment grade, are generally more exposed to credit risk than investment grade securities.

Credit ratings – "investment grade" securities are those rated in one of the top four rating categories by nationally recognized statistical rating organizations, such as Moody's or Standard & Poor's, or unrated securities judged by the Underlying Fund's subadviser to be of comparable quality. Obligations rated in the fourth-highest rating category by

RISKS OF INVESTING IN THE FUNDS (cont.)

any rating agency are considered medium-grade securities. Medium-grade securities, although considered investment grade, have speculative characteristics and may be subject to greater fluctuations in value than higher-rated securities. In addition, the issuers of medium-grade securities may be more vulnerable to adverse economic conditions or changing circumstances than issuers of higher-rated securities. High-yield bonds (i.e., “junk bonds”) are those that are rated below the fourth highest rating category, and therefore are not considered to be investment grade. Ratings of securities purchased by an Underlying Fund generally are determined at the time of their purchase. Any subsequent rating downgrade of a debt obligation will be monitored generally by the Underlying Fund’s subadviser to consider what action, if any, it should take consistent with its investment objective. There is no requirement that any such securities must be sold if downgraded.

Credit ratings evaluate the expectation that scheduled interest and principal payments will be made in a timely manner. They do not reflect any judgment of market risk. Credit ratings do not provide assurance against default or loss of money. For example, rating agencies might not always change their credit rating of an issuer in a timely manner to reflect events that could affect the issuer’s ability to make scheduled payments on its obligations. If a security has not received a rating, the Fund must rely entirely on the credit assessment of the Underlying Fund’s subadviser.

U.S. government and U.S. government agency securities – neither the U.S. government nor its agencies guarantee the market value of their securities, and interest rate changes, prepayments and other factors may affect the value of government securities. Some of the securities purchased by a Fund are issued by the U.S. government, such as Treasury notes, bills and bonds, and Government National Mortgage Association (“GNMA”) pass-through certificates, and are backed by the “full faith and credit” of the U.S. government (the U.S. government has the power to tax its citizens to pay these debts) and may be subject to less credit risk. Securities issued by U.S. government agencies, authorities or instrumentalities, such as the Federal Home Loan Banks, Federal National Mortgage Association (“FNMA”) and Federal Home Loan Mortgage Corporation (“FHLMC”), are neither issued nor guaranteed by the U.S. government. Although FNMA, FHLMC and the Federal Home Loan Banks are chartered by Acts of Congress, their securities are backed only by the credit of the respective instrumentality. Investors should remember that although certain government securities are guaranteed, market price and yield of the securities or net asset value and performance of the Funds are not guaranteed.

Asset-backed securities risk – like traditional fixed-income securities, the value of asset-backed securities typically increases when interest rates fall and decreases when interest rates rise. Certain asset-backed securities may also be subject to the risk of prepayment. In a period of declining

interest rates, borrowers may pay what they owe on the underlying assets more quickly than anticipated. Prepayment reduces the yield to maturity and the average life of the asset-backed securities. In addition, when a Fund reinvests the proceeds of a prepayment, it may receive a lower interest rate. In a period of rising interest rates, prepayments may occur at a slower rate than expected. As a result, the average maturity of a Fund’s portfolio may increase. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities.

The credit quality of most asset-backed securities depends primarily on the credit quality of the assets underlying such securities, how well the entity issuing the security is insulated from the credit risk of the originator or any other affiliated entities, and the amount and quality of any credit enhancement of the securities. Unlike mortgage-backed securities, asset-backed securities may not have the benefit of or be able to enforce any security interest in the related asset.

Mortgage-backed securities risk – these fixed-income securities represent the right to receive a portion of principal and/or interest payments made on a pool of residential or commercial mortgage loans. When interest rates fall, borrowers may refinance or otherwise repay principal on their loans earlier than scheduled. When this happens, certain types of mortgage-backed securities will be paid off more quickly than anticipated and a Fund will have to invest the proceeds in securities with lower yields. This risk is known as “prepayment risk.” Prepayment might also occur due to foreclosures on the underlying mortgage loans. When interest rates rise, certain types of mortgage-backed securities will be paid off more slowly than originally anticipated and the value of these securities will fall if the market perceives the securities’ interest rates to be too low for a longer-term investment. This risk is known as “extension risk.” Because of prepayment risk and extension risk, mortgage-backed securities react differently to changes in interest rates than other fixed-income securities. Small movements in interest rates (both increases and decreases) may quickly and significantly reduce the value of certain mortgage-backed securities. Through its investments in mortgage-backed securities, including those issued by private lenders, a Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans refer to loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments to their loans. For these reasons, the loans underlying these securities have had in many cases higher default rates than those loans that meet government underwriting requirements. The risk of non-payment is greater for mortgage-backed securities issued by private lenders that contain subprime loans, but a level of risk exists for all loans.

RISKS OF INVESTING IN THE FUNDS (cont.)

Extension risk – the risk that principal repayments will not occur as quickly as anticipated, causing the expected maturity of a security to increase. Rapidly rising interest rates may cause prepayments to occur more slowly than expected, thereby lengthening the duration of the securities held by an Underlying Fund and making their prices more sensitive to rate changes and more volatile if the market perceives the securities' interest rates to be too low for a longer-term investment.

Risks Associated with International Stocks and Bonds

Foreign securities risk – foreign stocks and bonds may be more volatile, harder to price and less liquid than U.S. securities. Foreign investments involve some of the following risks:

- political and economic instability;
- the impact of currency exchange rate fluctuations;
- sanctions imposed by other foreign governments, including the United States;
- reduced information about issuers;
- higher transaction costs;
- less stringent regulatory and accounting standards and
- delayed settlement.

Additional risks include the possibility that a foreign jurisdiction might impose or increase withholding taxes on income payable with respect to foreign securities; the possible seizure, nationalization or expropriation of the issuer or foreign deposits (in which the Fund could lose its entire investment in a certain market); and the possible adoption of foreign governmental restrictions such as exchange controls.

Foreign currencies – foreign securities may be denominated or quoted in currencies other than the U.S. dollar. Changes in foreign currency exchange rates affect the value of an Underlying Fund's portfolio. Generally, when the U.S. dollar rises in value against a foreign currency, a security denominated in that currency loses value because the currency is worth fewer U.S. dollars. Conversely, when the U.S. dollar decreases in value against a foreign currency, a security denominated in that currency gains value because the currency is worth more U.S. dollars.

Regional – adverse conditions in a certain region can adversely affect securities of issuers in other countries whose economies appear to be unrelated. To the extent that a Fund invests a significant portion of its assets in a specific geographic region, a Fund will generally have more exposure to regional economic risks. In the event of economic or political turmoil or a deterioration of diplomatic relations in a region or country where a substantial portion of a Fund's assets are invested, the Fund may experience substantial illiquidity or losses.

Foreign custody – an Underlying Fund that invests in foreign securities may hold such securities and cash in foreign banks and securities depositories. Some foreign banks and securities depositories may be recently organized or new to the foreign custody business, and there may be limited or no regulatory oversight of their operations. The laws of certain countries may put limits on an Underlying Fund's ability to recover its assets if a foreign bank, depository or issuer of a security, or any of their agents, goes bankrupt. In addition, it is often more expensive for an Underlying Fund to buy, sell and hold securities in certain foreign markets than in the United States. The increased expense of investing in foreign markets reduces the amount an Underlying Fund can earn on its investments and typically results in a higher operating expense ratio for an Underlying Fund holding assets outside the United States.

Depositary receipts – investments in foreign securities may be in the form of depositary receipts, such as American Depositary Receipts (ADRs), European Depositary Receipts (EDRs) and Global Depositary Receipts (GDRs), which typically are issued by local financial institutions and evidence ownership of the underlying securities. Depositary receipts are generally subject to the same risks as the foreign securities that they evidence or into which they may be converted. Depositary receipts may or may not be jointly sponsored by the underlying issuer. The issuers of unsponsored depositary receipts are not obligated to disclose information that is, in the United States, considered material. Therefore, there may be less information available regarding these issuers and there may not be a correlation between such information and the market value of the depositary receipts. Certain depositary receipts are not listed on an exchange and therefore may be considered to be illiquid securities.

Additional Principal Risks that May Affect the Funds

Derivatives risk – a derivative is a contract or investment, the value of which is based on the performance of an underlying financial asset, index or other measure. For example, the value of a futures contract changes based on the value of the underlying index, commodity or security. Derivatives often involve leverage, which means that their use can significantly magnify the effect of price movements of the underlying assets or reference measures, disproportionately increasing the Fund's or Underlying Fund's losses and reducing a Fund's or Underlying Fund's opportunities for gains when the financial asset or measure to which the derivative is linked changes in unexpected ways. Some risks of investing in derivatives include:

- the other party to the derivatives contract may fail to fulfill its obligations;

RISKS OF INVESTING IN THE FUNDS (cont.)

- their use may reduce liquidity and make a Fund or Underlying Fund harder to value, especially in declining markets and
- when used for hedging purposes, changes in the value of derivatives may not match or fully offset changes in the value of the hedged portfolio securities, thereby failing to achieve the original purpose for using the derivatives.

Futures contracts – the volatility of futures contract prices has been historically greater than the volatility of stocks and bonds. Because futures generally involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing a Fund's or Underlying Fund's losses and reducing a Fund's or Underlying Fund's opportunities for gains. While futures may be more liquid than other types of derivatives, the liquidity of the futures market depends on participants entering into offsetting transactions rather than making or taking delivery. To the extent participants decide to make or take delivery, liquidity in the futures market could be reduced. In addition, futures exchanges often impose a maximum permissible price movement on each futures contract for each trading session. A Fund or Underlying Fund may be disadvantaged if it is prohibited from executing a trade outside the daily permissible price movement.

Options – an option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a “call option”) or sell (a “put option”) the underlying security or futures contract (or settle for cash of an amount based on an underlying asset, rate or index) at a specified price (the “exercise price”) during a period of time or on a specified date. Investments in options are considered speculative. When an Underlying Fund writes (sells) an option, it profits if the option expires unexercised, because it retains the premium the buyer of the option paid. However, if an Underlying Fund writes a call option, it incurs the risk that the market price of the underlying security or futures contract could increase above the option's exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to sell the underlying security or futures contract at a lower price than its current market value. If an Underlying Fund writes a put option, it incurs the risk that the market value of the underlying security or futures contract could decrease below the option's exercise price. If this occurs, the option could be exercised and the Underlying Fund would be forced to buy the underlying security or futures contract at a higher price than its current market value. When an Underlying Fund purchases an option, it will lose the premium paid for the option if the price of the underlying security or futures contract decreases or remains the same (in the case of a call option) or increases or remains the

same (in the case of a put option). If an option purchased by an Underlying Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.

Purchasing and writing put and call options are highly specialized activities and entail greater-than-ordinary investment risks. To the extent that a Fund invests in over-the-counter options, the Underlying Fund may be exposed to credit risk with regard to parties with whom it trades and also may bear the risk of settlement default. These risks may differ materially from those entailed in exchange-traded transactions, which generally are backed by clearing-organization guarantees, daily marking-to-market and settlement, and segregation and minimum capital requirement applicable to intermediaries. Transactions entered directly between two counterparties generally do not benefit from such protections and expose the parties to the risk of counterparty default.

Swap transactions – the use of swaps is a highly specialized activity which involves investment techniques, risk analyses and tax planning different from those associated with ordinary portfolio securities transactions. Although certain swaps have been designated for mandatory central clearing, swaps are still privately negotiated instruments featuring a high degree of customization. Some swaps may be complex and valued subjectively. Swaps also may be subject to pricing or “basis” risk, which exists when a particular swap becomes extraordinarily expensive relative to historical prices or the price of corresponding cash market instruments. Because swaps often involve leverage, their use can significantly magnify the effect of price movements of the underlying securities or reference measures, disproportionately increasing an Underlying Fund's losses and reducing an Underlying Fund's opportunities for gains. At present, there are few central exchanges or markets for certain swap transactions. Therefore, such swaps may be less liquid than exchange-traded swaps or instruments. In addition, if a swap counterparty defaults on its obligations under the contract, an Underlying Fund could sustain significant losses.

Equity swaps – an equity swap enables an investor to buy or sell investment exposure linked to the total return (including dividends) of an underlying stock, group of stocks or stock index. Until equity swaps are designated for mandatory central clearing, the terms of an equity swap generally are privately negotiated by an Underlying Fund and the swap counterparty. An equity swap may be embedded within a structured note or other derivative instrument. Equity swaps are subject to stock market risk of the underlying stock, group of stocks or stock index in addition to counterparty credit risk. An equity swap could result in losses if the underlying stock, group of stocks, or stock index does not perform as anticipated.

RISKS OF INVESTING IN THE FUNDS (cont.)

Interest rate swaps – interest rate swaps allow parties to exchange their rights to receive payments on a security or other reference rate. The use of interest rate swaps involves the risk that an Underlying Fund’s subadviser will not accurately predict anticipated changes in interest rates, which may result in losses to the Underlying Fund. Interest rate swaps also involve the possible failure of a counterparty to perform in accordance with the terms of the swap agreement. If a counterparty defaults on its obligations under a swap agreement, the Underlying Fund may lose any amount it expected to receive from the counterparty, potentially including amounts in excess of the Fund’s initial investment.

Total return swaps – total return swaps allow the party receiving the total return to gain exposure and benefit from an underlying reference asset without actually having to own it. Total return swaps will create leverage and a Fund or Underlying Fund may experience substantial gains or losses in value as a result of relatively small changes in the value of the underlying asset. In addition, total return swaps are subject to credit and counterparty risk. If the counterparty fails to meet its obligations a Fund or Underlying Fund could sustain significant losses. Total return swaps also are subject to the risk that a Fund or Underlying Fund will not properly assess the cost of the underlying asset. If a Fund or Underlying Fund is the buyer of a total return swap, a Fund or Underlying Fund could lose money if the total return of the underlying asset is less than a Fund’s or Underlying Fund’s obligation to pay a fixed or floating rate of interest. If a Fund or Underlying Fund is the seller of a total return swap, a Fund or Underlying Fund could lose money if the total returns of the underlying asset are greater than the fixed or floating rate of interest it would receive.

Leverage – leverage may be created when an investment exposes a Fund or Underlying Fund to a risk of loss that exceeds the amount invested. Certain derivatives provide the potential for investment gain or loss that may be several times greater than the change in the value of an underlying security, asset, interest rate, index or currency, resulting in the potential for a loss that may be substantially greater than the amount invested. Some leveraged investments have the potential for unlimited loss, regardless of the size of the initial investment. Because leverage can magnify the effects of changes in the value of a Fund or Underlying Fund and make a Fund’s or Underlying Fund’s share price more volatile, a shareholder’s investment in a Fund may be more volatile, resulting in larger gains or losses in response to the fluctuating prices of a Fund’s or Underlying Fund’s investments. Further, the use of leverage may require a Fund or Underlying Fund to maintain assets as “cover,” maintain segregated asset accounts, or make margin payments, which might impair a Fund’s or Underlying Fund’s ability to sell a portfolio security or make an

investment at a time when it would otherwise be favorable to do so, or require that a Fund or Underlying Fund sell a portfolio security at a disadvantageous time.

Nationwide Fund Advisors, although registered as a commodity pool operator under the Commodity Exchange Act (“CEA”), has claimed exclusion from the definition of the term “commodity pool operator” under the CEA with respect to the Funds and, therefore, is not subject to the regulation as a commodity pool operator under the CEA in its management of the Funds.

The U.S. Securities and Exchange Commission has proposed new regulation of funds’ use of derivative instruments. The extent and impact of the regulation are not yet fully known and may not be for some time. New regulation of derivatives may make derivatives more costly, may limit the availability of derivatives or may otherwise adversely affect the value or performance of derivatives.

Index fund risk – Underlying Funds that seek to match the performance of an index may not fully replicate their respective indexes and may perform differently from the securities in the index. To minimize this possibility, index funds attempt to be fully invested at all times and generally do not hold a significant portion of their assets in cash. Since index funds generally do not attempt to hedge against market declines, they may fall in value more than other mutual funds in the event of a general market decline. In addition, unlike an index fund, an index has no operating or other expenses. As a result, even though index funds attempt to track their indexes as closely as possible, they will tend to underperform the indexes to some degree over time.

Liquidity risk – the risk that a security cannot be sold, or cannot be sold quickly, at an acceptable price. An inability to sell a portfolio position can adversely affect an Underlying Fund’s value or prevent an Underlying Fund from being able to take advantage of other investment opportunities. Liquidity risk may also refer to the risk that an Underlying Fund will be unable to pay redemption proceeds within the allowable time period because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. To meet redemption requests, an Underlying Fund may be forced to sell liquid securities at unfavorable times and conditions. Underlying Funds that invest in fixed-income securities and foreign securities will be especially subject to the risk that during certain periods, the liquidity of particular issuers will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions, whether or not accurate.

Loss of money is a risk of investing in the Funds. An investment in a Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

RISKS OF INVESTING IN THE FUNDS (cont.)

* * * * *

Temporary investments – each Fund and Underlying Fund generally will be fully invested in accordance with its objective and strategies. However, pending investment of cash balances, in anticipation of possible redemptions, or if a Fund's or Underlying Fund's management believes that business, economic, political or financial conditions warrant, a Fund may invest without limit in high-quality fixed-income securities, cash or money market cash equivalents. The use of temporary investments therefore is not a principal strategy, as it prevents a Fund from fully pursuing its investment objective, and the Fund may miss potential market upswings.

A Fund may invest in or use other types of investments or strategies not shown here that do not represent principal strategies or raise principal risks. More information about these non-principal investments, strategies and risks is available in the Funds' Statement of Additional Information ("SAI").

Selective Disclosure of Portfolio Holdings

Each Fund posts onto the internet site for the Trust (nationwide.com/mutualfundsnvit) substantially all of its securities holdings as of the end of each month. Such portfolio holdings are available no earlier than 15 calendar days after the end of the previous month, and generally remain available on the internet site until the Fund files its next portfolio holdings report on Form N-CSR or Form N-PORT with the U.S. Securities and Exchange Commission ("SEC"). A description of the Funds' policies and procedures regarding the release of portfolio holdings information is available in the Funds' SAI.

FUND MANAGEMENT

Investment Adviser

Nationwide Fund Advisors (“NFA” or “Adviser”), located at One Nationwide Plaza, Columbus, OH 43215, manages the investment of the Funds’ assets and supervises the daily business affairs of each Fund. Organized in 1999 as an investment adviser, NFA is a wholly owned subsidiary of Nationwide Financial Services, Inc.

NFA allocates the Funds’ assets according to their respective allocation ranges for each asset class and the Underlying Funds. NFA then monitors these allocations, as well as factors that could influence the allocations, such as market and economic conditions. For these services, each Fund pays NFA an annual management fee. This is in addition to the investment advisory fees paid to the Adviser by the Underlying Funds in which the Funds invest.

NFA has engaged Nationwide Asset Management, LLC (“NWAM”) to provide asset allocation consulting services to NFA in connection with the development and periodic review of each Investor Destinations Fund’s target allocation. NFA pays NWAM from the management fee it receives for the asset allocation consulting services. NWAM is a registered investment adviser and wholly owned subsidiary of Nationwide Mutual Insurance Company, and therefore is affiliated with NFA and Nationwide Life. NWAM also serves as the subadviser to certain Nationwide Funds. NFA and NWAM therefore could be subject to a conflict of interest, because one or more Underlying Funds selected for investment by the Investor Destinations Funds may be subadvised by NWAM, which earns fees for subadvising such Underlying Funds. The Nationwide Inflation-Protected Securities Fund and NVIT Short Term Bond Fund, two of the Underlying Funds in which the Investor Destinations Funds invest, are subadvised by NWAM.

The Investor Destinations Funds are used as underlying investment options to fund benefits payable under variable annuities and/or variable life insurance contracts issued by Nationwide Life (“Variable Insurance Contracts”), some of which may offer guaranteed lifetime income or death benefits. Additional conflicts of interest thus may exist also because Nationwide Life is affiliated with NFA and NWAM, and NFA’s and NWAM’s allocation decisions with respect to the Investor Destinations Funds may take into account Nationwide Life’s interests as they relate to guaranteed benefits available under Variable Insurance Contracts. For example, selecting and allocating assets to Underlying Funds that invest primarily in fixed-income securities or in a more conservative or less volatile investment style may operate to reduce the regulatory capital requirements that Nationwide Life must satisfy in order to support its guarantees under Variable Insurance Contracts if issues, may indirectly reduce Nationwide Life’s risk from the lifetime income or death benefits, or make it easier for Nationwide Life to manage its risk through the use of various hedging techniques. NFA has developed an

investment allocation process that seeks to ensure that the Investor Destinations Funds are managed in the best interests of contract owners who select sub-accounts that invest in the Investor Destinations Funds’ shares. Further, NFA and NWAM together have adopted various policies and procedures that are intended to identify, monitor and address actual or potential conflicts of interest. NFA ultimately has sole responsibility for determining each Investor Destinations Fund’s asset class allocation and the selection of the Underlying Funds. As the investment adviser to the Investor Destinations Funds, NFA has a fiduciary duty to each Investor Destinations Fund and must act in each Investor Destinations Fund’s best interests.

Management Fees

Each Fund pays NFA a management fee based on the Fund’s average daily net assets. The total management fee paid by each Fund for the fiscal year ended December 31, 2019, expressed as a percentage of each Fund’s average daily net assets and taking into account any applicable fee waivers or reimbursements, was as follows:

Fund	Actual Management Fee Paid
NVIT Investor Destinations Aggressive Fund	0.13%
NVIT Investor Destinations Balanced Fund	0.13%
NVIT Investor Destinations Capital Appreciation Fund	0.13%
NVIT Investor Destinations Conservative Fund	0.13%
NVIT Investor Destinations Moderate Fund	0.13%
NVIT Investor Destinations Moderately Aggressive Fund	0.13%
NVIT Investor Destinations Moderately Conservative Fund	0.13%

A discussion regarding the basis for the Board of Trustees’ approval of the investment advisory agreement for the Funds is in the Funds’ Annual Report to shareholders, which covers the period ending December 31, 2019.

Portfolio Management

Christopher C. Graham; Keith P. Robinette, CFA; and Andrew Urban, CFA, are the Funds’ co-portfolio managers and are jointly responsible for the day-to-day management of the Funds in accordance with (1) their respective asset class allocation ranges and (2) the allocations to each of their respective Underlying Funds.

Mr. Graham is Chief Investment Officer of NFA. Mr. Graham joined the Office of Investments at Nationwide Mutual Insurance Company (“Nationwide Mutual”) in November 2004, serving primarily as a portfolio manager for a hedge

FUND MANAGEMENT *(cont.)*

fund and for Nationwide Mutual's proprietary general account. He joined NFA in 2016.

Mr. Robinette is a Senior Director of Asset Strategies of NFA. Mr. Robinette joined Nationwide Mutual in 2012 where he most recently managed a hedge fund portfolio and led manager due diligence reviews. He joined NFA in 2017.

Mr. Urban is a Senior Director of Asset Strategies of NFA. He joined NFA in 2016. Prior to joining NFA, Mr. Urban worked for six years as an investment analyst for the Ohio Public Employees Retirement System, where he was most recently responsible for hedge fund manager selection and due diligence as well as portfolio risk management.

The Adviser does not expect to recommend subadviser changes frequently. The Adviser periodically provides written reports to the Board of Trustees regarding its evaluation and monitoring of each subadviser. Although the Adviser monitors each subadviser's performance, there is no certainty that any subadviser or Fund will obtain favorable results at any given time.

Additional Information about the Portfolio Managers

The SAI provides additional information about each portfolio manager's compensation, other accounts managed by each portfolio manager and each portfolio manager's ownership of securities in the Funds managed by the portfolio manager, if any.

Manager-of-Managers Structure

The Adviser has no current plans to hire a subadviser with respect to these Funds. Nevertheless, the Adviser and the Trust have received an exemptive order from the U.S. Securities and Exchange Commission for a manager-of-managers structure that allows the Adviser, subject to the approval of the Board of Trustees, to hire, replace or terminate a subadviser (excluding hiring a subadviser which is an affiliate of the Adviser) without the approval of shareholders. The order also allows the Adviser to revise a subadvisory agreement with an unaffiliated subadviser with the approval of the Board of Trustees but without shareholder approval. Currently, the Funds are managed directly by the Adviser, but if a new unaffiliated subadviser is hired for a Fund, shareholders will receive information about the new subadviser within 90 days of the change. The exemptive order allows the Funds greater flexibility, enabling them to operate more efficiently.

Pursuant to the exemptive order, the Adviser monitors and evaluates any subadvisers, which includes the following:

- performing initial due diligence on prospective Fund subadvisers;
- monitoring subadviser performance, including ongoing analysis and periodic consultations;
- communicating performance expectations and evaluations to the subadvisers;
- making recommendations to the Board of Trustees regarding renewal, modification or termination of a subadviser's contract and
- selecting Fund subadvisers.

INVESTING WITH NATIONWIDE FUNDS

Choosing a Share Class

Shares of series of the Trust (the “Funds”) are currently sold to separate accounts of insurance companies, including Nationwide Life Insurance Company, Jefferson National Life Insurance Company and their affiliated life insurance companies (collectively, “Nationwide”) to fund benefits payable under variable insurance contracts. The Trust currently issues Class I, Class II, Class IV, Class V, Class VIII, Class D, Class P and Class Y shares. Each Fund offers only certain share classes; therefore, many share classes are not available for certain Funds.

Insurance companies, including Nationwide, that provide additional services entitling them to receive 12b-1 fees may sell Class D, Class P, Class II and Class VIII shares. Class D shares are offered solely to insurance companies that are not affiliated with Nationwide. Class Y shares are sold to other mutual funds, such as “funds-of-funds” that invest in the Funds, and to separate accounts of insurance companies that seek neither 12b-1 fees nor administrative services fees. Class IV shares are sold generally to separate accounts of Nationwide previously offering shares of the Market Street Fund portfolios (prior to April 28, 2003). Class V shares are currently sold to certain separate accounts of Nationwide to fund benefits payable under corporate owned life insurance (“COLI”) contracts. Shares of the Funds are not sold to individual investors.

The separate accounts purchase shares of a Fund in accordance with variable account allocation instructions received from owners of the variable insurance contracts. A Fund then uses the proceeds to buy securities for its portfolio.

Because variable insurance contracts may have different provisions with respect to the timing and method of purchases and exchanges, variable insurance contract owners should contact their insurance company directly for details concerning these transactions.

Please check with Nationwide to determine if a Fund is available under your variable insurance contract. In addition, a particular class of a Fund may not be available under your specific variable insurance contract. The prospectus of the separate account for the variable insurance contract shows the classes available to you, and should be read in conjunction with this Prospectus.

The Funds currently do not foresee any disadvantages to the owners of variable insurance contracts arising out of the fact that the Funds may offer their shares to both variable annuity and variable life insurance policy separate accounts, and to the separate accounts of various other insurance companies to fund benefits of their variable insurance contracts. Nevertheless, the Board of Trustees will monitor any material irreconcilable conflicts which may arise (such as those arising from tax or other differences), and determine what action, if any, should be taken in response

to such conflicts. If such a conflict were to occur, one or more insurance companies’ separate accounts might be required to withdraw their investments in one or more of the Funds. This might force a Fund to sell its securities at disadvantageous prices.

The distributor for the Funds is Nationwide Fund Distributors LLC (“NFD” or the “Distributor”).

Purchase Price

The purchase price of each share of a Fund is its net asset value (“NAV”) next determined after the order is received by the Fund or its agents. No sales charge is imposed on the purchase of a Fund’s shares; however, your variable insurance contract may impose a sales charge. Generally, net assets are based on the market value of the securities and other assets owned by a Fund, less its liabilities. The NAV for a class is determined by dividing the total market value of the securities and other assets of a Fund allocable to such class, less the liabilities allocable to that class, by the total number of that class’s outstanding shares.

NAV is determined at the close of regular trading on the New York Stock Exchange (usually 4 p.m. Eastern Time) (“Exchange”) on each day the Exchange is open for trading. Each Fund may reject any order to buy shares and may suspend the sale of shares at any time.

The Funds do not calculate NAV on the following days:

- New Year’s Day
- Martin Luther King Jr. Day
- Presidents’ Day
- Good Friday
- Memorial Day
- Independence Day
- Labor Day
- Thanksgiving Day
- Christmas Day
- Other days when the Exchange is closed.

To the extent that a Fund’s investments are traded in markets that are open when the Exchange is closed, the value of a Fund’s investments may change on days when shares cannot be purchased or redeemed.

Fair Value Pricing

The Board of Trustees has adopted Valuation Procedures governing the method by which individual portfolio securities held by the Funds (including affiliated Underlying Funds) are valued in order to determine each Fund’s NAV. The Valuation Procedures provide that each Fund’s assets are valued primarily on the basis of market-based quotations. Investments in other registered open-end mutual funds are valued based on the NAV for those mutual funds, which in turn may use fair value pricing. Where such Underlying Fund NAVs or other market-based quotations for a Fund’s assets are either unavailable or deemed by the

INVESTING WITH NATIONWIDE FUNDS (cont.)

Adviser to be unreliable, such securities are valued at fair value by the Trustees or persons acting at their direction pursuant to procedures approved by the Board of Trustees. In addition, fair value determinations are required for securities whose value is affected by a significant event (as defined below) that will materially affect the value of a security and which occurs subsequent to the time of the close of the principal market on which such security trades but prior to the calculation of the Funds' NAVs. The prospectuses for those underlying mutual funds should explain the circumstances under which those funds will use fair value pricing and the effects of using fair value pricing. Shares of exchange-traded funds are valued based on the prices at which they trade on the stock exchanges on which they are listed.

A "significant event" is defined by the Valuation Procedures as an event that materially affects the value of a security that occurs after the close of the principal market on which such security trades but before the calculation of a Fund's NAV. Significant events that could affect individual portfolio securities may include corporate actions such as reorganizations, mergers and buy-outs, corporate announcements on earnings, significant litigation, regulatory news such as government approvals and news relating to natural disasters affecting an issuer's operations. Significant events that could affect a large number of securities in a particular market may include significant market fluctuations, market disruptions or market closings, governmental actions or other developments, or natural disasters or armed conflicts that affect a country or region.

By fair valuing a security, each Fund attempts to establish a price that it might reasonably expect to receive upon the current sale of that security. The fair value of one or more of the securities in a Fund's portfolio which is used to determine a Fund's NAV could be different from the actual value at which those securities could be sold in the market. Thus, fair valuation may have an unintended dilutive or accretive effect on the value of shareholders' investments in a Fund.

Due to the time differences between the closings of the relevant foreign securities exchanges and the time that an Underlying Fund's NAV is calculated, an Underlying Fund may fair value its foreign investments more frequently than it does other securities. When fair value prices are utilized, these prices will attempt to reflect the impact of the financial markets' perceptions and trading activities on an Underlying Fund's foreign investments since the last closing prices of the foreign investments were calculated on their primary foreign securities markets or exchanges. Pursuant to the Valuation Procedures, an Underlying Fund's foreign equity investments generally will be fair valued daily by an independent pricing service using models designed to estimate likely changes in the values of those investments between the times in which the trading in those securities is substantially completed and the close of the Exchange. The

fair values assigned to an Underlying Fund's foreign investments may not be the quoted or published prices of the investments on their primary markets or exchanges.

The Valuation Procedures are intended to help ensure that the prices at which a Fund's shares are purchased and redeemed are fair, and do not result in dilution of shareholder interests or other harm to shareholders. In the event a Fund fair values its securities, the Fund's NAV may be higher or lower than would have been the case if the Fund had not fair valued its securities.

In-Kind Purchases

Each Fund may accept payment for shares in the form of securities that are permissible investments for such Fund.

Selling Shares

Shares may be sold (redeemed) at any time, subject to certain restrictions described below. The redemption price is the NAV per share next determined after the order is received by the Fund or its agent. Of course, the value of the shares redeemed may be more or less than their original purchase price depending upon the market value of a Fund's investments at the time of the redemption.

Because variable insurance contracts may have different provisions with respect to the timing and method of redemptions, variable insurance contract owners should contact their insurance company directly for details concerning these transactions.

Under normal circumstances, a Fund expects to satisfy redemption requests through the sale of investments held in cash or cash equivalents. However, a Fund may also use the proceeds from the sale of portfolio securities or a bank line of credit to meet redemption requests if consistent with management of the Fund, or in stressed market conditions. Under extraordinary circumstances, a Fund, in its sole discretion, may elect to honor redemption requests by transferring some of the securities held by the Fund directly to an account holder as a redemption in-kind. If an account holder receives securities in a redemption in-kind, the account holder may incur brokerage costs, taxes or other expenses in converting the securities to cash (although tax implications for investments in variable insurance contracts are typically deferred during the accumulation phase). Securities received from in-kind redemptions are subject to market risk until they are sold. For more about the Funds' ability to make a redemption in-kind, as well as how redemptions in-kind are effected, see the SAI.

Restrictions on Sales

Shares of a Fund may not be redeemed or a Fund may delay paying the proceeds from a redemption when the Exchange is closed (other than customary weekend and holiday

INVESTING WITH NATIONWIDE FUNDS (cont.)

closings) or if trading is restricted or an emergency exists (as determined by the SEC).

Subject to the provisions of the variable insurance contracts, a Fund may delay forwarding the proceeds of your redemption for up to 7 days after receipt of such redemption request. Such proceeds may be delayed if the investor redeeming shares is engaged in excessive trading, or if the amount of the redemption request otherwise would be disruptive to efficient portfolio management or would adversely affect the Fund.

Excessive or Short-Term Trading

Each Fund seeks to discourage excessive or short-term trading (often described as “market timing”). Excessive trading (either frequent exchanges between Funds or redemptions and repurchases of Funds within a short time period) may:

- disrupt portfolio management strategies;
- increase brokerage and other transaction costs and
- negatively impact Fund performance for all variable insurance contract owners indirectly investing in a Fund.

A Fund may be more or less affected by short-term trading in Fund shares, depending on various factors such as the size of the Fund, the amount of assets the Fund typically maintains in cash or cash equivalents, the dollar amount, number and frequency of trades in Fund shares and other factors. Funds that invest in foreign securities may be at greater risk for excessive trading. Investors may attempt to take advantage of anticipated price movements in securities held by the Funds based on events occurring after the close of a foreign market that may not be reflected in the Fund’s NAV (referred to as “arbitrage market timing”). Arbitrage market timing may also be attempted in funds that hold significant investments in small-cap securities, high-yield (junk) bonds and other types of investments that may not be frequently traded. There is the possibility that arbitrage market timing, under certain circumstances, may dilute the value of Fund shares if redeeming shareholders receive proceeds (and buying shareholders receive shares) based on NAVs that do not reflect appropriate fair value prices.

The Board of Trustees has adopted the following policies with respect to excessive short-term trading in all classes of the Funds.

Monitoring of Trading Activity

It is difficult for the Funds to monitor short-term trading because the insurance company separate accounts that invest in the Funds typically aggregate the trades of all of their respective contract holders into a single purchase, redemption or exchange transaction. Additionally, most insurance companies combine all of their contract holders’ investments into a single omnibus account in each Fund.

Therefore, the Funds typically cannot identify, and thus cannot successfully prevent, short-term trading by an individual contract holder within that aggregated trade or omnibus account but must rely instead on the insurance company to monitor its individual contract holder trades to identify individual short-term traders.

Subject to the limitations described above, each Fund does, however, monitor significant cash flows into and out of the Fund and, when unusual cash flows are identified, will request that the applicable insurance company investigate the activity, inform the Fund whether or not short-term trading by an individual contract holder is occurring and take steps to prevent future short-term trades by such contract holder.

With respect to the Nationwide variable insurance contracts which offer the Funds, Nationwide monitors redemption and repurchase activity, and as a general matter, Nationwide currently limits the number and frequency of trades as set forth in the Nationwide separate account prospectus. Other insurance companies may employ different policies or provide different levels of cooperation in monitoring trading activity and complying with Fund requests.

Restrictions on Transactions

As described above, each insurance company has its own policies and restrictions on short-term trading. Additionally, the terms and restrictions on short-term trading may vary from one variable insurance contract to another even among those contracts issued by the same insurance company. Therefore, contract holders should consult their own variable insurance contract for the specific short-term trading periods and restrictions.

Whenever a Fund is able to identify short-term trades and/or traders, such Fund has broad authority to take discretionary action against market timers and against particular trades. As described above, however, the Fund typically requires the assistance of the insurance company to identify such short-term trades and traders. In the event the Fund cannot identify and prevent such trades, these may result in increased costs to all Fund shareholders as described below. When identified, a Fund has sole discretion to:

- restrict or reject purchases or exchanges that it or its agents believe constitute excessive trading and
- reject purchases or exchanges that violate a Fund’s excessive trading policies or its exchange limits.

Distribution and Services Plans

Because distribution and services fees are paid out of a Fund’s assets on an ongoing basis, these fees will increase the cost of your investment over time and may cost you more than paying other types of charges.

INVESTING WITH NATIONWIDE FUNDS (cont.)

Distribution Plan

In addition to expenses that may be imposed by variable insurance contracts, the Trust has adopted a Distribution Plan under Rule 12b-1 of the 1940 Act, which permits the Funds to compensate the Distributor for expenses associated with distributing and selling Class II and Class P shares of a Fund and providing shareholder services. Under the Distribution Plan, a Fund pays the Distributor from its Class II or Class P shares a fee that is accrued daily and paid monthly ("Rule 12b-1 fees"). The amount of this fee shall not exceed an annual amount of 0.25% of the average daily net assets of a Fund's Class II shares and Class P shares. The Distribution Plan may be terminated at any time as to any share class of a Fund, without payment of any penalty, by a vote of a majority of the outstanding voting securities of that share class.

Administrative Services Plan

Class II shares of the Funds are subject to fees pursuant to an Administrative Services Plan (the "Plan") adopted by the Trust. These fees are paid by a Fund to insurance companies or their affiliates (including those that are affiliated with Nationwide) who provide administrative support services to variable insurance contract holders on behalf of the Funds and are based on the average daily net assets of the applicable share class. Under the Plan, a Fund may pay an insurance company or its affiliates a maximum annual fee of 0.25% for Class II shares; however, many insurance companies do not charge the maximum permitted fee or even a portion thereof. Class P shares do not pay an administrative services fee.

For the current fiscal year, administrative services fees for the Funds, expressed as a percentage of the share class's average daily net assets, are estimated to be 0.15% for Class II shares.

Revenue Sharing

NFA and/or its affiliates (collectively, "Nationwide Funds Group" or "NFG") often make payments for marketing, promotional or related services provided by:

- insurance companies that offer subaccounts in the Funds as underlying investment options in variable annuity contracts or
- broker-dealers and other financial intermediaries that sell variable insurance contracts that include such investment options.

These payments are often referred to as "revenue sharing payments." The existence or level of such payments may be based on factors that include, without limitation, differing levels or types of services provided by the insurance company, broker-dealer or other financial intermediary, the expected level of assets or sales of shares, the placing of some or all of the Funds on a recommended or preferred

list, access to an intermediary's personnel and other factors. Revenue sharing payments are paid from NFG's own legitimate profits and other of its own resources (not from the Funds') and may be in addition to any Rule 12b-1 payments or administrative services payments that are paid. Because revenue sharing payments are paid by NFG, and not from the Funds' assets, the amount of any revenue sharing payments is determined by NFG.

In addition to the revenue sharing payments described above, NFG may offer other incentives to sell variable insurance contract separate accounts in the form of sponsorship of educational or other client seminars relating to current products and issues, assistance in training or educating an intermediary's personnel, and/or entertainment or meals. These payments may also include, at the direction of a retirement plan's named fiduciary, amounts to a retirement plan intermediary to offset certain plan expenses or otherwise for the benefit of plan participants and beneficiaries.

The recipients of such incentives may include:

- affiliates of NFA;
- broker-dealers and other financial intermediaries that sell such variable insurance contracts and
- insurance companies, such as Nationwide, that include shares of the Funds as underlying subaccount options.

Payments may be based on current or past sales of separate accounts investing in shares of the Funds, current or historical assets, or a flat fee for specific services provided. In some circumstances, such payments may create an incentive for an insurance company or intermediary or their employees or associated persons to:

- recommend a particular variable insurance contract or specific subaccounts representing shares of a Fund instead of recommending options offered by competing insurance companies or
- sell shares of a Fund instead of shares of funds offered by competing fund families.

Notwithstanding the revenue sharing payments described above, NFA and all subadvisers to the Trust are prohibited from considering a broker-dealer's sale of any of the Trust's shares, or the inclusion of the Trust's shares in an insurance contract provided by an insurance affiliate of the broker-dealer, in selecting such broker-dealer for the execution of Fund portfolio transactions.

Fund portfolio transactions nevertheless may be effected with broker-dealers who coincidentally may have assisted customers in the purchase of variable insurance contracts that feature subaccounts in the Funds' shares issued by Nationwide Life Insurance Company, Nationwide Life & Annuity Insurance Company, Jefferson National Life Insurance Company or Jefferson National Life Insurance Company of New York, affiliates of NFA, although neither such assistance nor the volume of shares sold of the Trust or

INVESTING WITH NATIONWIDE FUNDS *(cont.)*

any affiliated investment company is a qualifying or disqualifying factor in NFA's or a subadviser's selection of such broker-dealer for portfolio transaction execution.

The insurance company that provides your variable insurance contract may also make similar revenue sharing payments to broker-dealers and other financial intermediaries in order to promote the sale of such insurance contracts. Contact your insurance provider and/or financial intermediary for details about revenue sharing payments it may pay or receive.

DISTRIBUTIONS AND TAXES

Dividends and Distributions

Each Fund intends to elect and qualify each year as a regulated investment company under the Internal Revenue Code. As a regulated investment company, a Fund generally pays no federal income tax on the income and gains it distributes to the insurance company separate accounts. Each Fund expects to declare and distribute all of its net investment income, if any, as dividends quarterly. Each Fund will distribute net realized capital gains, if any, at least annually. A Fund may distribute such income dividends and capital gains more frequently, if necessary, in order to reduce or eliminate federal excise or income taxes on the Fund. The amount of any distribution will vary, and there is no guarantee a Fund will pay either an income dividend or a capital gains distribution. Each Fund automatically reinvests any capital gains and income dividends in additional shares of the Fund unless the insurance company has requested in writing to receive such dividends and distributions in cash.

Tax Status

Shares of the Funds must be purchased through separate accounts used to fund variable insurance contracts. As a result, it is anticipated that any income dividends or capital gains distributed by a Fund will be exempt from current taxation by contract holders if left to accumulate within a separate account. Withdrawals from such contracts may be subject to ordinary income tax and, if made before age 59½, a 10% penalty tax. Investors should ask their own tax advisors for more information on their tax situation, including possible state or local taxes. For more information on taxes, please refer to the accompanying prospectus of the annuity or life insurance program through which shares of the Funds are offered.

Please refer to the SAI for more information regarding the tax treatment of the Funds.

This discussion of “Distributions and Taxes” is not intended or written to be used as tax advice. Contract owners should consult their own tax professional about their tax situation.

ADDITIONAL INFORMATION

The Trust enters into contractual arrangements with various parties (collectively, “service providers”), including, among others, the Funds’ investment adviser, subadviser(s), shareholder service providers, custodian(s), securities lending agent, fund administration and accounting agents, transfer agent and distributor, who provide services to the Funds. Shareholders and contract holders are not parties to, or intended (or “third-party”) beneficiaries of, any of those contractual arrangements, and those contractual arrangements are not intended to create in any individual shareholder or group of shareholders or contract holders any right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the Trust.

This Prospectus provides information concerning the Trust and the Funds that you should consider in determining whether to purchase shares of the Funds. Neither this Prospectus, nor the related SAI, is intended, or should be read, to be or to give rise to an agreement or contract between the Trust or the Funds and any shareholder or contract holder or to give rise to any rights to any shareholder, contract holder or other person other than any rights under federal or state law that may not be waived.

FINANCIAL HIGHLIGHTS

The financial highlights tables are intended to help you understand the Funds' financial performance for the past five years ended December 31 or, if a Fund or a class has not been in operation for five years, for the life of that Fund or class. Certain information reflects financial results for a single Fund share. The total returns in the tables represent the rate that an investor would have earned (or lost) on an investment in a Fund (assuming reinvestment of all dividends and distributions). THE TOTAL RETURNS DO NOT INCLUDE CHARGES THAT ARE IMPOSED BY VARIABLE INSURANCE CONTRACTS. IF THESE CHARGES WERE REFLECTED, RETURNS WOULD BE LOWER THAN THOSE SHOWN. Information has been audited by PricewaterhouseCoopers LLP, whose report, along with the Funds' financial statements, is included in the Trust's annual reports, which are available upon request.

APPENDIX

Additional Information about the Underlying Funds

Following are descriptions of the affiliated Underlying Funds in which the Funds may invest as of the date of this Prospectus. These descriptions are qualified in their entirety by reference to the prospectus and statement of additional information of each Underlying Fund. The following list of eligible Underlying Funds is subject to change at any time and without notice. This Appendix does not contain information about unaffiliated mutual funds, including exchange-traded funds, in which the Funds may invest. Underlying Funds not identified in this Appendix may be selected by the Adviser at its discretion. Prospectuses for any Underlying Funds should be referred to for more information.

U.S. Stocks

NVIT S&P 500 INDEX FUND seeks long-term capital appreciation by employing a “passive” management, or indexing, approach, which seeks to match approximately the performance of the S&P 500® Index before the deduction of Fund expenses. The S&P 500® Index includes approximately 500 stocks of large U.S. companies in a wide range of businesses. Under normal circumstances, the Fund invests at least 80% of its net assets in equity securities of companies included in the S&P 500® Index.

NATIONWIDE MAXIMUM DIVERSIFICATION U.S. CORE EQUITY ETF seeks to track the total return performance by employing a “passive management” (or indexing) approach, before fees and expenses, of the TOBAM Maximum Diversification® USA Index (the “Index”). The Index is a rules-based index that is designed to create a more diversified equity portfolio of the common and preferred stock of large- and mid-capitalization U.S. companies relative to traditional market capitalization weighted benchmarks. Under normal circumstances, at least 80% of the Fund’s total assets (exclusive of any collateral held from securities lending) will be invested in the component securities of the Index.

NATIONWIDE RISK-BASED U.S. EQUITY ETF seeks to track the total return performance by employing a “passive management” (or indexing) approach, before fees and expenses, of the R Risk-Based US Index (the “Index”). The Index is a rules-based, equal risk-weighted index that is designed to provide exposure to U.S. listed large-capitalization companies with lower volatility, reduced maximum drawdown (the loss from the highest Index value to its lowest value before achieving a new highest value), and an improved Sharpe ratio (a risk-adjusted measure of return) as compared to traditional, market capitalization weighted approaches. Under normal circumstances, at least 80% of the Fund’s total assets (exclusive of any collateral held from securities lending) will be invested in the component securities of the Index.

NATIONWIDE MULTI-CAP PORTFOLIO seeks to incrementally exceed the performance of the U.S. stock market, as represented by the Russell 3000® Index, over a full market cycle. The Russell 3000® Index is composed of the 3,000 largest U.S. companies by market capitalization, as determined by the Frank Russell Company, and includes U.S. companies in a wide range of businesses and capitalization sizes. The Russell 3000® Index is a market-weighted index, which means that the stocks of the largest companies in the Index have the greatest effect on its performance. The Fund consists of three portions, or “sleeves,” managed by different subadvisers acting independently with respect to the assets of the Fund they manage. In combination, the Fund’s three sleeves are intended to provide a risk-controlled, low tracking error investment approach while achieving modest returns in excess of the Russell 3000® Index.

NVIT MID CAP INDEX FUND seeks capital appreciation by employing a “passive” management, or indexing, approach, which seeks to match approximately the performance of the S&P MidCap 400® Index before the deduction of Fund expenses. The S&P MidCap 400® Index includes approximately 400 stocks of medium-sized U.S. companies in a wide range of businesses. Under normal circumstances, the Fund invests at least 80% of its net assets in equity securities of companies included in the S&P MidCap 400® Index.

NVIT SMALL CAP INDEX FUND seeks to match the performance of the Russell 2000® Index as closely as possible before the deduction of Fund expenses by employing a “passive” management, or indexing, approach. The Russell 2000® Index is composed of approximately 2,000 common stocks of smaller U.S. companies in a wide range of businesses. Under normal circumstances, the Fund invests at least 80% of its net assets in a statistically selected sampling of equity securities of companies included in the Russell 2000® Index.

International Stocks

NATIONWIDE RISK-BASED INTERNATIONAL EQUITY ETF, seeks to track the total return performance by employing a “passive management” (or indexing) approach, before fees and expenses, of the R Risk-Based International Index (the “Index”). The Index is a rules-based, equal risk-weighted index that is designed to provide exposure to large-capitalization companies in developed markets outside the United States and Canada with lower volatility, reduced maximum drawdown (the loss from the highest Index value to its lowest value before achieving a new highest value), and an improved Sharpe ratio (a risk-adjusted measure of return) as compared to traditional, market capitalization weighted approaches. Under normal circumstances, at least 80% of the Fund’s total assets (exclusive of any collateral held from securities lending) will be invested in the component securities of the Index and investments that

APPENDIX (cont.)

have economic characteristics that are substantially identical to the economic characteristics of such component securities (e.g., depositary receipts).

NVIT INTERNATIONAL INDEX FUND seeks to match the performance of the MSCI Europe, Australasia and Far East Index (“MSCI EAFE® Index”) as closely as possible before the deduction of Fund expenses by employing a “passive” management, or indexing, approach. The MSCI EAFE® Index includes common stocks of larger companies located in Europe, Australia and Asia (including the Far East). Under normal circumstances, the Fund invests at least 80% of its net assets in a statistically selected sampling of equity securities of companies included in the MSCI EAFE® Index.

NVIT EMERGING MARKETS FUND seeks long-term capital growth by investing primarily in equity securities of companies that are tied economically to emerging market countries. The Fund considers a company to be tied economically to emerging market countries if it is headquartered, trades on an exchange or maintains at least 50% of its assets in, or derives at least 50% of its revenues from, emerging market countries. Emerging market countries typically are developing and low- or middle-income countries, and may be found in regions such as Asia, Latin America, Eastern Europe, the Middle East and Africa. Some emerging market countries may be considered to be “frontier market” countries, although the Fund will not invest more than 20% of its net assets in frontier market countries. The Fund consists of two portions managed by different subadvisers.

Bonds

AMUNDI NVIT MULTI SECTOR BOND FUND seeks to provide above average total return over a market cycle of three to five years. Under normal circumstances, the Fund invests at least 80% of its net assets in different types of fixed-income securities, with few limitations as to credit quality, geography, maturity or sector. These fixed-income securities can include U.S. government securities and foreign government bonds, as well as U.S. and foreign corporate bonds and debentures, asset-backed securities, mortgage-backed securities and convertible bonds. Some of the issuers of foreign securities may be located in emerging market countries. The Fund may invest in high-yield bonds and other securities that are lower-rated. The Fund may use derivatives, such as futures and foreign currency contracts, to either increase returns, hedge against international currency exposure, or manage the Fund’s average portfolio duration. The Fund may also use credit default swaps to hedge against investment risks or to increase returns.

NVIT BOND INDEX FUND seeks to match the performance of the Bloomberg Barclays U.S. Aggregate Bond Index (“Aggregate Bond Index”) as closely as possible before the deduction of Fund expenses by employing a “passive” management, or indexing, approach. The Aggregate Bond

Index represents a wide spectrum of public, investment grade, fixed-income securities in the United States, including government, corporate, and international dollar-denominated bonds, as well as mortgage-backed securities. Under normal circumstances, the Fund invests at least 80% of its net assets in a statistically selected sampling of bonds and other fixed income securities that are included in or correlated with the Aggregate Bond Index.

NATIONWIDE CORE PLUS BOND FUND seeks maximum long-term total return, consistent with reasonable risk to principal, by investing primarily in investment grade debt securities of varying maturities. Under normal circumstances, the Fund invests at least 80% of its net assets in fixed-income securities. These securities typically include corporate bonds, U.S. government securities, and mortgage-backed securities. The Fund generally invests at least 80% of its assets in a diversified mix of fixed-income securities that are considered to be investment grade. The Fund may invest up to 20% of its assets in high-yield bonds, which are lower-rated or non-investment grade, and often referred to as “junk bonds.”

THE NATIONWIDE CONTRACT is a fixed interest contract issued by Nationwide Life Insurance Company (“Nationwide Life”). The Nationwide Contract has a stable principal value and pays a fixed rate of interest to each Fund that invests in the contract, which is currently adjusted on a quarterly basis. If Nationwide Life becomes unable to pay interest or repay principal under the contract, a Fund may lose money. Because the entire contract is issued by a single issuer, the financial health of such issuer may have a greater impact on the value of a Fund that invests in it. Nationwide Life could decide to stop issuing the Nationwide Contract in its current form, and instead offer the Funds a new fixed interest contract (or amend the existing contract). NFA can increase or redeem all or a portion of a Fund’s investment in the Nationwide Contract on a daily basis at par for any reason without imposition of any sales charge or market value adjustment. Neither the Funds, the Adviser, Nationwide Life nor any of its affiliates guarantee a Fund’s performance or that a Fund will provide a certain level of income.

The Fund’s portfolio managers believe that the stable nature of the Nationwide Contract may reduce a Fund’s volatility and overall risk, especially during periods when the market values of bonds and other debt securities decline. However, under certain market conditions, such as when the market values of bonds and other debt securities increase, investing in the Nationwide Contract could hamper a Fund’s performance.

NATIONWIDE INFLATION-PROTECTED SECURITIES FUND seeks to provide inflation protection and income consistent with investment in inflation-indexed securities. Most of these securities are Treasury Inflation Protected Securities, which are inflation-adjusted securities issued by the U.S. Treasury. Nevertheless, this Underlying Fund has the

APPENDIX (cont.)

flexibility to invest in other inflation-linked U.S. government securities, as well as inflation-linked securities issued by entities such as domestic and foreign corporations and governments, so long as they are investment grade at the time of their purchase. The Fund also may invest up to 20% of its net assets in fixed-income securities that are not linked to inflation. These securities may include other debt securities issued by the U.S. government, its agencies or instrumentalities, corporations or other non-governmental issuers. In selecting securities, the subadviser typically maintains a dollar-weighted average portfolio maturity that is up to one year greater than or less than the dollar-weighted average portfolio maturity of the Bloomberg Barclays U.S. TIPS Index. As of December 31, 2019, the dollar-weighted average portfolio maturity of the Bloomberg Barclays U.S. TIPS Index was 7.49 years, although this can change or fluctuate over time.

NVIT SHORT TERM BOND FUND seeks to provide a high level of current income while preserving capital and minimizing fluctuations in share value by investing, under normal circumstances, at least 80% of its net assets in a wide variety of investment grade fixed-income securities, such as corporate bonds, U.S. government securities, mortgage-backed and asset-backed securities and commercial paper. The Fund may also invest in foreign government and corporate bonds that are denominated in U.S. dollars. Any of these securities may pay interest on either a fixed-rate or variable-rate basis. In choosing securities, the subadviser attempts to identify securities that, in its opinion, offer the best combination of yield, maturity and relative price performance, based on anticipated changes in interest rates and in the price relationships among various types of fixed-income securities. The Fund is managed so that its average portfolio duration generally will not exceed three years.

The SAI contains more information about the Funds' investments and strategies and can be requested using the telephone number on the back of this Prospectus.

Information from Nationwide Funds

Please read this Prospectus before you invest, and keep it with your records. This Prospectus is intended for use in connection with variable insurance contracts. The following documents – which may be obtained free of charge – contain additional information about the Funds' investments:

- Statement of Additional Information (incorporated by reference into this Prospectus)
- Annual Reports (which contain discussions of the market conditions and investment strategies that significantly affected each Fund's performance during its last fiscal year)
- Semiannual Reports

To obtain a document free of charge, to request other information about the Funds, or to make inquiries to the Funds, call 800-848-6331, visit nationwide.com/mutualfundsnvit or contact your variable insurance provider.
