STATEMENT OF ADDITIONAL INFORMATION
May 1, 2020

This Statement of Additional Information (“SAI”) is not a prospectus but supplements and should be read in conjunction with the prospectuses dated May 1, 2020 for AB Variable Products Series (VPS) Fund, Inc. (the “Fund”) that offer Class A shares and Class B shares of the Fund’s Portfolios (each, a “Prospectus”, and together, the “Prospectuses”). Financial statements for each Portfolio of the Fund for the year ended December 31, 2019 are incorporated into this SAI by reference. Copies of the Prospectuses and annual reports may be obtained by contacting AllianceBernstein Investor Services, Inc. (“ABIS”) at the address or the “For Literature” telephone number shown above or on the Internet at www.abfunds.com.

INFORMATION ABOUT THE PORTFOLIOS AND THEIR INVESTMENTS

Introduction to the Portfolios

The Fund is an open-end series investment company designed to fund variable annuity contracts and variable life insurance policies offered by the separate accounts of certain life insurance companies (the “Insurers”). The Fund currently offers an opportunity to choose among the separately managed pools of assets (the “Portfolios”) described in the Portfolios’ Prospectuses, each of which has differing investment objectives and policies. The Fund currently has eleven Portfolios, all of which are described in this SAI.

Except as noted, the investment objectives and policies described below are not “fundamental policies” within the meaning of the Investment Company Act of 1940 (the “1940 Act”), and may, therefore, be changed by the Board of Directors of the Fund (the “Board” or the “Directors”) without shareholder approval. However, no Portfolio will change its investment objective without at least 60 days’ prior written notice to shareholders. There is no guarantee that a Portfolio will achieve its investment objective. Whenever any investment policy or restriction states a minimum or maximum percentage of a Portfolio’s assets that may be invested in any security or other asset, it is intended that such minimum or maximum percentage limitation be determined immediately after and as a result of such Portfolio’s acquisition of such security or other asset. Accordingly, except with respect to borrowing, any later increase or decrease in percentage beyond the specified limitations resulting from a change in value or net assets will not be considered a violation of this percentage limitation.

Additional Investment Policies and Practices

The following information about the Portfolios’ investment policies and practices supplements the information set forth in the Prospectuses.

The Global Risk Allocation—Moderate Portfolio invests in shares of one or more underlying funds that, in turn, invest directly in portfolio securities (“Underlying Funds”). Investing in shares of the Underlying Funds involves substantially the same risks as investing directly in the underlying instruments, but may involve additional expenses similar to those borne directly by the Portfolio, including other operating expenses. Certain investments, techniques and risks will only apply to the Global Risk Allocation—Moderate Portfolio to the extent the Portfolio is invested in an Underlying Fund that invests in or engages in those investments, techniques, or strategies or directly invests in or engages in such investments, techniques, or strategies. For the purposes of this discussion, references to the Fund or a Portfolio include an Underlying Fund unless the context otherwise requires.

Convertible Securities

Convertible securities include bonds, debentures, corporate notes and preferred stocks that are convertible at a stated exchange rate into shares of the underlying common stock. Prior to their conversion, convertible securities have the same general characteristics as

non-convertible debt securities, which provide a stable stream of income with generally higher yields than those of equity securities of the same or similar issuers. As with debt securities, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. While convertible securities generally offer lower interest or dividend yields than non-convertible debt securities of similar quality, they do enable the investor to benefit from increases in the market price of the underlying common stock.

When the market price of the common stock underlying a convertible security increases, the price of the convertible security increasingly reflects the value of the underlying common stock and may rise accordingly. As the market price of the underlying common stock declines, the convertible security tends to trade increasingly on a yield basis, and thus may not depreciate to the same extent as the underlying common stock. Convertible securities rank senior to common stocks in an issuer's capital structure. They are consequently of higher quality and entail less risk than the issuer's common stock, although the extent to which such risk is reduced depends in large measure upon the degree to which the convertible security sells above its value as a fixed-income security.

Depository Receipts

A Portfolio may invest in depository receipts. American Depositary Receipts ("ADRs") are depository receipts typically issued by a U.S. bank or trust company that evidence ownership of underlying securities issued by a foreign corporation. European Depositary Receipts ("EDRs"), Global Depositary Receipts ("GDRs") or other types of depository receipts are typically issued by non-U.S. banks or trust companies and evidence ownership of underlying securities issued by either a U.S. or non-U.S. company. Transactions in these securities may not necessarily be settled in the same currency as transactions in the securities into which they represent. In addition, the issuers of the securities of unsponsored depository receipts are not obligated to disclose material information in the United States. Generally, ADRs, in registered form, are designed for use in the U.S. securities markets; EDRs, in bearer form, are designed for use in European securities markets; and GDRs, in bearer form, are designed for use in two or more securities markets, such as those of Europe and Asia.

Derivatives

A Portfolio may, but is not required to, use derivatives for hedging or other risk management purposes or as part of its investment strategies. Derivatives are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. These assets, rates, and indices may include bonds, stocks, mortgages, commodities, interest rates, currency exchange rates, bond indices and stock indices.

There are four principal types of derivatives—options, futures contracts, forwards and swaps. These principal types of derivative instruments, as well as the ways they may be used by a Portfolio, are described below. Derivatives include listed and cleared transactions where the Portfolio's derivative trade counterparty is an exchange or clearinghouse, and non-cleared bilateral "over-the-counter" ("OTC") transactions that are privately negotiated and where the Portfolio's derivative trade counterparty is a financial institution. Exchange-traded or cleared derivatives transactions tend to be subject to less counterparty credit risk than those

that are privately negotiated. The Portfolios may use derivatives to earn income and enhance returns, to hedge or adjust the risk profile of a portfolio and either to replace more traditional direct investments or to obtain exposure to otherwise inaccessible markets.

Forward Contracts. A forward contract, which may be standardized and exchange-traded or customized and privately negotiated, is an agreement for one party to buy, and the other party to sell, a specific quantity of an underlying security, commodity or other asset for an agreed-upon price at a future date. A forward contract generally is settled by physical delivery of the security, commodity or other tangible asset underlying the forward contract to an agreed-upon location at a future date (rather than settled by cash) or is rolled forward into a new forward contract. Non-deliverable forwards (“NDFs”) specify a cash payment upon maturity.

Futures Contracts and Options on Futures Contracts. A futures contract is an agreement that obligates the buyer to buy and the seller to sell a specified quantity of an underlying asset (or settle for cash the value of a contract based on an underlying asset, rate or index) at a specific price on the contract maturity date. Options on futures contracts are options that call for the delivery of futures contracts upon exercise. Futures contracts are standardized, exchange-traded instruments and are fungible (*i.e.*, considered to be perfect substitutes for each other). This fungibility allows futures contracts to be readily offset or canceled through the acquisition of equal but opposite positions, which is the primary method by which futures contracts are liquidated. A cash-settled futures contract does not require physical delivery of the underlying asset but instead is settled for cash equal to the difference between the values of the contract on the date it is entered into and its maturity date.

Options. An option, which may be standardized and exchange-traded, or customized and privately negotiated, is an agreement that, for a premium payment or fee, gives the option holder (the buyer) the right but not the obligation to buy (a “call”) or sell (a “put”) the underlying asset (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the exercise price) during a period of time or on a specified date. Likewise, when an option is exercised the writer of the option is obligated to sell (in the case of a call option) or to purchase (in the case of a put option) the underlying asset (or settle for cash an amount based on an underlying asset, rate or index).

Swaps. A swap is an agreement that obligates two parties to exchange a series of cash flows at specified intervals (payment dates) based upon or calculated by reference to changes in specified prices or rates (*e.g.*, interest rates in the case of interest rate swaps, currency exchange rates in the case of currency swaps) for a specified amount of an underlying asset (the “notional” principal amount). Most swaps are entered into on a net basis (*i.e.*, the two payment streams are netted out, with a Portfolio receiving or paying, as the case may be, only the net amount of the two payments). Generally, the notional principal amount is used solely to calculate the payment streams but is not exchanged. Certain standardized swaps, including certain interest rate swaps and credit default swaps, are subject to mandatory central clearing and are required to be executed through a regulated swap execution facility. Cleared swaps are transacted through futures commission merchants (“FCMs”) that are members of central clearinghouses with the clearinghouse serving as central counterparty, similar to transactions in futures contracts. Funds post initial and variation margin to support their obligations under cleared swaps by making payments to their clearing member FCMs. Central clearing is intended

to reduce counterparty credit risks and increase liquidity, but central clearing does not make swap transactions risk free. The Securities and Exchange Commission (the “Commission”) may adopt similar clearing and execution requirements in respect of certain security-based swaps under its jurisdiction. Privately negotiated swap agreements are two-party contracts entered into primarily by institutional investors and are not cleared through a third party, nor are these required to be executed on a regulated swap execution facility.

Risks of Derivatives and Other Regulatory Issues. Investment techniques employing such derivatives involve risks different from, and, in certain cases, greater than, the risks presented by more traditional investments. Following is a general discussion of important risk factors and issues concerning the use of derivatives.

— **Market Risk.** This is the general risk attendant to all investments that the value of a particular investment will change in a way detrimental to a Portfolio’s interest.

— **Management Risk.** Derivative products are highly specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself, without the benefit of observing the performance of the derivative under all possible market conditions. In particular, the use and complexity of derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to a Portfolio’s investment portfolio, and the ability to forecast price, interest rate or currency exchange rate movements correctly.

— **Credit Risk.** This is the risk that a loss may be sustained by a Portfolio as a result of the failure of another party to a derivative (usually referred to as a “counterparty”) to comply with the terms of the derivative contract. The credit risk for derivatives traded on an exchange or through a clearinghouse is generally less than for uncleared OTC derivatives, since the performance of the exchange or clearinghouse, which is the issuer or counterparty to each derivative, is supported by all the members of such exchange or clearinghouse. The performance of an exchange or clearinghouse is further supported by a daily payment system (*i.e.*, margin requirements) operated by the exchange or clearinghouse in order to reduce overall credit risk. There is no similar intermediary support for uncleared OTC derivatives. Therefore, a Portfolio will effect transactions in uncleared OTC derivatives only with investment dealers and other financial institutions (such as commercial banks) deemed creditworthy by the Adviser, and the Adviser has adopted procedures for monitoring the creditworthiness of such entities.

— **Counterparty Risk.** The value of an OTC derivative will depend on the ability and willingness of a Portfolio’s counterparty to perform its obligations under the transaction. If the counterparty defaults, a Portfolio will have contractual remedies but may choose not to enforce them to avoid the cost and unpredictability of legal proceedings. In addition, if a counterparty fails to meet

its contractual obligations, a Portfolio could miss investment opportunities or otherwise be required to retain investments it would prefer to sell, resulting in losses for the Portfolio. Participants in OTC derivatives markets generally are not subject to the same level of credit evaluation and regulatory oversight as are exchanges or clearinghouses. As a result, OTC derivatives generally expose a Portfolio to greater counterparty risk than derivatives traded on an exchange or through a clearinghouse.

Recent regulations affecting derivatives transactions require certain standardized derivatives, including many types of swaps, to be subject to mandatory central clearing. Under these requirements, a central clearing organization is substituted as the counterparty to each side of the derivatives transaction. Each party to derivatives transactions is required to maintain its positions with a clearing organization through one or more clearing brokers. Central clearing is intended to reduce, but not eliminate, counterparty risk. A Portfolio is subject to the risk that its clearing member or clearing organization will itself be unable to perform its obligations. A Portfolio may also face the indirect risk of the failure of another clearing member customer to meet its obligations to the clearing member, causing a default by the clearing member on its obligations to the clearinghouse.

— **Illiquid Investments Risk.** Illiquid investments risk exists when a particular instrument is difficult to purchase, sell or otherwise liquidate. If a derivative transaction is particularly large or if the relevant market is illiquid (as is the case with many privately-negotiated derivatives), it may not be possible to initiate a transaction or liquidate a position at an advantageous price.

— **Leverage Risk.** Since many derivatives have a leverage component, adverse changes in the value or level of the underlying asset, rate or index can result in a loss substantially greater than the amount invested in the derivative itself. In the case of swaps, the risk of loss generally is related to a notional principal amount, even if the parties have not made any initial investment. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment.

— **Regulatory Risk.** Various U.S. Government entities, including the Commodity Futures Trading Commission (“CFTC”) and the Commission, are in the process of adopting and implementing additional regulations governing derivatives markets required by, among other things, the Dodd-Frank Act, including clearing as discussed above, margin, reporting and registration requirements. In December 2019, the SEC re-proposed a new rule regarding derivatives requiring, among other things, that a fund entering into derivatives transactions comply with an absolute or relative value-at-risk limitation and implement a derivatives risk management program, unless the fund’s derivatives usage is maintained at limited levels. While the full extent and cost of these regulations is unclear, these regulations could, among other things, restrict a Portfolio’s ability to engage in derivatives transactions and/or increase the cost of

such derivatives transactions (through the increased margin or capital requirements). In addition, Congress, various exchanges and regulatory and self-regulatory authorities have undertaken reviews of futures, options and swaps markets in light of market volatility. Among the actions that have been taken or proposed to be taken are new limits and reporting requirements for speculative positions, new or more stringent daily price fluctuation limits, and increased margin requirements for various types of futures transactions. These regulations and actions may adversely affect the instruments in which a Portfolio invests and its ability to execute its investment strategy.

The CFTC has also issued rules requiring certain OTC derivatives transactions that fall within its jurisdiction to be executed through a regulated securities, futures or swap exchange or execution facility. Such requirements may make it more difficult or costly for a Portfolio to enter into highly tailored or customized transactions. They may also render certain strategies in which a Portfolio may otherwise engage impossible or so costly that they will not be economical to implement. If a Portfolio decides to become a direct member of one or more swap exchange or execution facilities, it will be subject to all of the rules of the exchange or execution facility.

European regulation of the derivatives market is also relevant to the extent a Portfolio engages in derivatives transactions with a counterparty that is subject to the European Market Infrastructure Regulation (“EMIR”). EMIR introduced uniform requirements in respect of OTC derivative contracts by requiring certain “eligible” OTC derivatives contracts to be submitted for clearing to regulated central clearing counterparties and by mandating the reporting of certain details of OTC derivatives contracts to trade repositories. In addition, EMIR imposes risk mitigation requirements, including requiring appropriate procedures and arrangements to measure, monitor and mitigate operational and counterparty credit risk in respect of OTC derivatives contracts which are not subject to mandatory clearing. These risk mitigation requirements include the exchange, and potentially the segregation, of collateral by the parties, including by a Portfolio. While many of the obligations under EMIR have come into force, a number of other requirements have not yet come into force or are subject to phase-in periods, and certain key issues have not been resolved. It is therefore not yet fully clear how the OTC derivatives market will ultimately adapt to the new European regulatory regime for OTC derivatives.

— **Other Risks.** Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Many derivatives, in particular privately-negotiated derivatives, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to a Portfolio. Derivatives do not always perfectly or even highly correlate with or track the value of the assets, rates or indices they are designed to closely track. Consequently, a Portfolio’s use

of derivatives may not always be an effective means of, and sometimes could be counterproductive to, furthering the Portfolio's investment objective.

Other. A Portfolio may purchase and sell derivative instruments only to the extent that such activities are consistent with the requirements of the Commodity Exchange Act ("CEA") and the rules adopted by the CFTC thereunder. Under CFTC rules, a registered investment company that conducts more than a certain amount of trading in futures contracts, commodity options, certain swaps and other commodity interests is a commodity pool and its adviser must register as a commodity pool operator, or CPO. Under such rules, registered investment companies that are commodity pools are subject to additional registration, recordkeeping, reporting and disclosure requirements. AllianceBernstein L.P., the Portfolios' adviser (the "Adviser"), and the Portfolios, except for the Dynamic Asset Allocation Portfolio and Global Risk Allocation—Moderate Portfolio, have claimed an exclusion from the definition of CPO under CFTC Rule 4.5 under the CEA based on the extent of their derivatives use and are not currently subject to these recordkeeping, reporting and disclosure requirements. The trading exemption in Rule 4.5 is not available to the Dynamic Asset Allocation Portfolio or Global Risk Allocation—Moderate Portfolio, and the Adviser has registered as a CPO with respect to these Portfolios. This registration subjects the Dynamic Asset Allocation Portfolio and Global Risk Allocation—Moderate Portfolio to certain recordkeeping, reporting and disclosure requirements but, under rules adopted by the CFTC, compliance with Commission disclosure and filing requirements, for the most part, constitutes compliance with comparable CFTC requirements.

Use of Options, Futures Contracts, Forwards and Swaps by the Portfolios

– **Forward Currency Exchange Contracts.** A forward currency exchange contract is an obligation by one party to buy, and the other party to sell, a specific amount of a currency for an agreed-upon price at a future date. A forward currency exchange contract may result in the delivery of the underlying asset upon maturity of the contract in return for the agreed-upon payment. NDFs specify a cash payment upon maturity. NDFs are normally used when the market for physical settlement of the currency is underdeveloped, heavily regulated or highly taxed.

A Portfolio may, for example, enter into forward currency exchange contracts to attempt to minimize the risk to the Portfolio from adverse changes in the relationship between the U.S. Dollar and other currencies. A Portfolio may purchase or sell forward currency exchange contracts for hedging purposes similar to those described below in connection with its transactions in foreign currency futures contracts. A Portfolio may also purchase or sell forward currency exchange contracts for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under "Currency Transactions".

If a hedging transaction in forward currency exchange contracts is successful, the decline in the value of portfolio securities or the increase in the cost of securities to be acquired may be offset, at least in part, by profits on the forward currency exchange contract. Nevertheless, by entering into such forward currency exchange contracts, a Portfolio may be required to forgo all or a portion of the benefits which otherwise could have been obtained from favorable movements in exchange rates.

A Portfolio may use forward currency exchange contracts to seek to increase total return when the Adviser anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by the Portfolio and do not present attractive investment opportunities. For example, a Portfolio may enter into a foreign currency exchange contract to purchase a currency if the Adviser expects the currency to increase in value. The Portfolio would recognize a gain if the market value of the currency is more than the contract value of the currency at the time of settlement of the contract. Similarly, a Portfolio may enter into a foreign currency exchange contract to sell a currency if the Adviser expects the currency to decrease in value. The Portfolio would recognize a gain if the market value of the currency is less than the contract value of the currency at the time of settlement of the contract.

The cost of engaging in forward currency exchange contracts varies with such factors as the currencies involved, the length of the contract period and the market conditions then prevailing. Since transactions in foreign currencies are usually conducted on a principal basis, no fees or commissions are involved.

– **Options on Securities.** A Portfolio may write and purchase call and put options on securities. In purchasing an option on securities, the Portfolio would be in a position to realize a gain if, during the option period, the price of the underlying securities increased (in the case of a call) or decreased (in the case of a put) by an amount in excess of the premium paid; otherwise the Portfolio would experience a loss not greater than the premium paid for the option. Thus, a Portfolio would realize a loss if the price of the underlying security declined or remained the same (in the case of a call) or increased or remained the same (in the case of a put) or otherwise did not increase (in the case of a put) or decrease (in the case of a call) by more than the amount of the premium. If a put or call option purchased by a Portfolio were permitted to expire without being sold or exercised, its premium would represent a loss to the Portfolio.

A Portfolio may write a put or call option in return for a premium, which is retained by the Portfolio whether or not the option is exercised. A Portfolio may write covered options or uncovered options. A call option written by a Portfolio is “covered” if the Portfolio owns the underlying security, has an absolute and immediate right to acquire that security upon conversion or exchange of another security it holds, or holds a call option on the underlying security with an exercise price equal to or less than the exercise price of the call option it has written. A put option written by a Portfolio is covered if the Portfolio holds a put option on the underlying securities with an exercise price equal to or greater than the exercise price of the put option it has written. Uncovered options or “naked options” are riskier than covered options. For example, if a Portfolio wrote a naked call option and the price of the underlying security increased, the Portfolio would have to purchase the underlying security for delivery to the call buyer and sustain a loss, which could be substantial, equal to the difference between the option price and the market price of the security.

A Portfolio may also purchase call options to hedge against an increase in the price of securities that the Portfolio anticipates purchasing in the future. If such increase occurs, the call option will permit the Portfolio to purchase the securities at the exercise price, or to close out the option at a profit. The premium paid for the call option plus any transaction costs will reduce the benefit, if any, realized by the Portfolio upon exercise of the option, and, unless the

price of the underlying security rises sufficiently, the option may expire worthless to the Portfolio and the Portfolio will suffer a loss on the transaction to the extent of the premium paid.

A Portfolio may purchase put options to hedge against a decline in the value of portfolio securities. If such decline occurs, the put options will permit the Portfolio to sell the securities at the exercise price or to close out the options at a profit. By using put options in this way, a Portfolio will reduce any profit it might otherwise have realized on the underlying security by the amount of the premium paid for the put option and by transaction costs.

A Portfolio also may, as an example, write combinations of put and call options on the same security, known as “straddles”, with the same exercise and expiration date. By writing a straddle, a Portfolio undertakes a simultaneous obligation to sell and purchase the same security in the event that one of the options is exercised. If the price of the security subsequently rises above the exercise price, the call will likely be exercised and a Portfolio will be required to sell the underlying security at or below market price. This loss may be offset, however, in whole or in part, by the premiums received on the writing of the two options. Conversely, if the price of the security declines by a sufficient amount, the put will likely be exercised. The writing of straddles will likely be effective, therefore, only where the price of the security remains stable and neither the call nor the put is exercised. In those instances where one of the options is exercised, the loss on the purchase or sale of the underlying security may exceed the amount of the premiums received.

By writing a call option, a Portfolio limits its opportunity to profit from any increase in the market value of the underlying security above the exercise price of the option. By writing a put option, a Portfolio assumes the risk that it may be required to purchase the underlying security for an exercise price above its then current market value, resulting in a capital loss unless the security subsequently appreciates in value. Where options are written for hedging purposes, such transactions constitute only a partial hedge against declines in the value of portfolio securities or against increases in the value of securities to be acquired, up to the amount of the premium.

A Portfolio may purchase or write options on securities of the types in which it is permitted to invest in privately-negotiated (*i.e.*, OTC transactions). Options purchased or written in negotiated transactions may be illiquid and it may not be possible for the Portfolios to effect a closing transaction at a time when the Adviser believes it would be advantageous to do so.

– **Options on Securities Indices.** An option on a securities index is similar to an option on a security except that, rather than taking or making delivery of a security at a specified price, an option on a securities index gives the holder the right to receive, upon exercise of the option, an amount of cash if the closing level of the chosen index is greater than (in the case of a call) or less than (in the case of a put) the exercise price of the option.

A Portfolio may write (sell) call and put options and purchase call and put options on securities indices. If a Portfolio purchases put options on securities indices to hedge its investments against a decline in the value of portfolio securities it will seek to offset a decline in the value of securities it owns through appreciation of the put option. If the value of a Portfolio's investments does not decline as anticipated, or if the value of the option does not increase, the

Portfolio's loss will be limited to the premium paid for the option. The success of this strategy will largely depend on the accuracy of the correlation between the changes in value of the index and the changes in value of a Portfolio's security holdings.

A Portfolio may also write put or call options on securities indices to, among other things, earn income. If the value of the chosen index declines below the exercise price of the put option, the Portfolio has the risk of loss of the amount of the difference between the exercise price and the closing level of the chosen index, which it would be required to pay to the buyer of the put option and which may not be offset by the premium it received upon sale of the put option. Similarly, if the value of the index is higher than the exercise price of the call option, the Portfolio has the risk of loss of the amount of the difference between the exercise price and the closing level of the chosen index, which may not be offset by the premium it received upon sale of the call option. If the value of the index is significantly below or above the exercise price of the written option, the Portfolio could experience a substantial loss.

The purchase of call options on securities indices may be used by a Portfolio to attempt to reduce the risk of missing a broad market advance, or an advance in an industry or market segment, at a time when the Portfolio holds uninvested cash or short-term debt securities awaiting investment. When purchasing call options for this purpose, a Portfolio will also bear the risk of losing all or a portion of the premium paid if the value of the index does not rise. The purchase of call options on stock indices when a Portfolio is substantially fully invested is a form of leverage, up to the amount of the premium and related transaction costs, and involves risks of loss and of increased volatility similar to those involved in purchasing call options on securities the Portfolio owns.

– **Other Option Strategies.** In an effort to earn extra income, to adjust exposure to individual securities or markets, or to protect all or a portion of its portfolio from a decline in value, sometimes within certain ranges, a Portfolio that invests in equity securities may use option strategies such as the concurrent purchase of a call or put option, including on individual securities, stock indices, futures contracts (including on individual securities and stock indices) or shares of exchange-traded funds ("ETFs") at one strike price and the writing of a call or put option on the same individual security, stock index, futures contract or ETF at a higher strike price in the case of a call option or at a lower strike price in the case of a put option. The maximum profit from this strategy would result for the call options from an increase in the value of the individual security, stock index, futures contract or ETF above the higher strike price or for the put options from the decline in the value of the individual security, stock index, futures contract or ETF below the lower strike price. If the price of the individual security, stock index, futures contract or ETF declines in the case of the call option or increases in the case of the put option, the Portfolio has the risk of losing the entire amount paid for the call or put options.

– **Options on Foreign Currencies.** A Portfolio may purchase and write options on foreign currencies for hedging and non-hedging purposes. For example, a decline in the dollar value of a foreign currency in which portfolio securities are denominated will reduce the dollar value of such securities, even if their value in the foreign currency remains constant. In order to protect against such diminutions in the value of portfolio securities, a Portfolio may purchase put options on the foreign currency. If the value of the currency does decline, the Portfolio will have the right to sell such currency for a fixed amount in dollars and could thereby

offset, in whole or in part, the adverse effect on its portfolio which otherwise would have resulted.

Conversely, where a rise in the dollar value of a currency in which securities to be acquired are denominated is projected, thereby increasing the cost of such securities, a Portfolio may purchase call options thereon. The purchase of such options could offset, at least partially, the effects of the adverse movements in exchange rates. As in the case of other types of options, however, the benefit to a Portfolio from purchases of foreign currency options will be reduced by the amount of the premium and related transaction costs. In addition, where currency exchange rates do not move in the direction or to the extent anticipated, a Portfolio could sustain losses on transactions in foreign currency options which would require it to forgo a portion or all of the benefits of advantageous changes in such rates.

A Portfolio may write options on foreign currencies for hedging purposes or to increase return. For example, where a Portfolio anticipates a decline in the dollar value of non-U.S. Dollar-denominated securities due to adverse fluctuations in exchange rates it could, instead of purchasing a put option, write a call option on the relevant currency. If the expected decline occurs, the option will most likely not be exercised, and the diminution in value of portfolio securities could be offset by the amount of the premium received.

Similarly, instead of purchasing a call option to hedge against an anticipated increase in the dollar cost of securities to be acquired, a Portfolio could write a put option on the relevant currency, which, if rates move in the manner projected, will expire unexercised and allow the Portfolio to hedge such increased cost up to the amount of the premium. As in the case of other types of options, however, the writing of a foreign currency option will constitute only a partial hedge up to the amount of the premium, and only if rates move in the expected direction. If this does not occur, the option may be exercised and a Portfolio will be required to purchase or sell the underlying currency at a loss which may not be offset by the amount of the premium. Through the writing of options on foreign currencies, a Portfolio also may be required to forgo all or a portion of the benefits which might otherwise have been obtained from favorable movements in exchange rates.

In addition to using options for the hedging purposes described above, a Portfolio may also invest in options on foreign currencies for non-hedging purposes as a means of making direct investments in foreign currencies. A Portfolio may use options on currency to seek to increase total return when the Adviser anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by the Portfolio and do not present attractive investment opportunities. For example, a Portfolio may purchase call options in anticipation of an increase in the market value of a currency. The Portfolio would ordinarily realize a gain if, during the option period, the value of such currency exceeded the sum of the exercise price, the premium paid and transaction costs. Otherwise, the Portfolio would realize no gain or a loss on the purchase of the call option. Put options may be purchased by a Portfolio for the purpose of benefiting from a decline in the value of a currency that the Portfolio does not own. The Portfolio would normally realize a gain if, during the option period, the value of the underlying currency decreased below the exercise price sufficiently to more than cover the premium and transaction costs. Otherwise, the Portfolio would realize no gain or loss on the

purchase of the put option. For additional information on the use of options on foreign currencies for non-hedging purposes, see “Currency Transactions” below.

Special Risks Associated with Options on Currencies. An exchange-traded options position may be closed out only on an options exchange that provides a secondary market for an option of the same series. Although a Portfolio will generally purchase or sell options for which there appears to be an active secondary market, there is no assurance that a liquid secondary market on an exchange will exist for any particular option, or at any particular time. For some options, no secondary market on an exchange may exist. In such event, it might not be possible to effect closing transactions in particular options, with the result that a Portfolio would have to exercise its options in order to realize any profit and would incur transaction costs on the purchase or sale of the underlying currency.

– **Futures Contracts and Options on Futures Contracts.** Futures contracts that a Portfolio may buy and sell may include futures contracts on fixed-income or other securities, and contracts based on interest rates, foreign currencies or financial indices, including any index of U.S. Government securities. A Portfolio may, for example, purchase or sell futures contracts and options thereon to hedge against changes in interest rates, securities (through index futures or options) or currencies.

Interest rate futures contracts are purchased or sold for hedging purposes to attempt to protect against the effects of interest rate changes on a Portfolio’s current or intended investments in fixed-income securities. For example, if a Portfolio owned long-term bonds and interest rates were expected to increase, that Portfolio might sell interest rate futures contracts. Such a sale would have much the same effect as selling some of the long-term bonds in that Portfolio’s portfolio. However, since the futures market is generally more liquid than the cash market, the use of interest rate futures contracts as a hedging technique allows a Portfolio to hedge its interest rate risk without having to sell its portfolio securities. If interest rates were to increase, the value of the debt securities in the portfolio would decline, but the value of that Portfolio’s interest rate futures contracts would be expected to increase at approximately the same rate, thereby keeping the net asset value (“NAV”) of that Portfolio from declining as much as it otherwise would have. On the other hand, if interest rates were expected to decline, interest rate futures contracts could be purchased to hedge in anticipation of subsequent purchases of long-term bonds at higher prices. Because the fluctuations in the value of the interest rate futures contracts should be similar to those of long-term bonds, a Portfolio could protect itself against the effects of the anticipated rise in the value of long-term bonds without actually buying them until the necessary cash becomes available or the market has stabilized. At that time, the interest rate futures contracts could be liquidated and that Portfolio’s cash reserves could then be used to buy long-term bonds on the cash market.

A Portfolio may purchase and sell foreign currency futures contracts for hedging or risk management purposes in order to protect against fluctuations in currency exchange rates. Such fluctuations could reduce the dollar value of portfolio securities denominated in foreign currencies, or increase the cost of non-U.S. Dollar-denominated securities to be acquired, even if the value of such securities in the currencies in which they are denominated remains constant. A Portfolio may sell futures contracts on a foreign currency, for example, when it holds securities denominated in such currency and it anticipates a decline in the value of such currency relative to

the dollar. If such a decline were to occur, the resulting adverse effect on the value of non-U.S. Dollar-denominated securities may be offset, in whole or in part, by gains on the futures contracts. However, if the value of the foreign currency increases relative to the dollar, a Portfolio's loss on the foreign currency futures contract may or may not be offset by an increase in the value of the securities because a decline in the price of the security stated in terms of the foreign currency may be greater than the increase in value as a result of the change in exchange rates.

Conversely, a Portfolio could protect against a rise in the dollar cost of non-U.S. Dollar-denominated securities to be acquired by purchasing futures contracts on the relevant currency, which could offset, in whole or in part, the increased cost of such securities resulting from a rise in the dollar value of the underlying currencies. When a Portfolio purchases futures contracts under such circumstances, however, and the price in dollars of securities to be acquired instead declines as a result of appreciation of the dollar, the Portfolio will sustain losses on its futures position which could reduce or eliminate the benefits of the reduced cost of portfolio securities to be acquired.

A Portfolio may also engage in currency "cross hedging" when, in the opinion of the Adviser, the historical relationship among foreign currencies suggests that a Portfolio may achieve protection against fluctuations in currency exchange rates similar to that described above at a reduced cost through the use of a futures contract relating to a currency other than the U.S. Dollar or the currency in which the foreign security is denominated. Such "cross hedging" is subject to the same risks as those described above with respect to an unanticipated increase or decline in the value of the subject currency relative to the U.S. Dollar.

A Portfolio may also use foreign currency futures contracts and options on such contracts for non-hedging purposes. Similar to options on currencies described above, a Portfolio may use foreign currency futures contracts and options on such contracts to seek to increase total return when the Adviser anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by the Underlying Portfolio and do not present attractive investment opportunities. The risks associated with foreign currency futures contracts and options on futures contracts are similar to those associated with options on foreign currencies, as described above. For additional information on the use of options on foreign currencies for non-hedging purposes, see "Currency Transactions" below.

Purchases or sales of stock or bond index futures contracts are used for hedging or risk management purposes to attempt to protect a Portfolio's current or intended investments from broad fluctuations in stock or bond prices. For example, a Portfolio may sell stock or bond index futures contracts in anticipation of or during a market decline to attempt to offset the decrease in market value of the Portfolio's portfolio securities that might otherwise result. If such decline occurs, the loss in value of portfolio securities may be offset, in whole or in part, by gains on the futures position. When a Portfolio is not fully invested in the securities market and anticipates a significant market advance, it may purchase stock or bond index futures contracts in order to gain rapid market exposure that may, in whole or in part, offset increases in the cost of securities that the Portfolio intends to purchase. As such purchases are made, the corresponding positions in stock or bond index futures contracts will be closed out.

Options on futures contracts are options that call for the delivery of futures contracts upon exercise. Options on futures contracts written or purchased by a Portfolio will be traded on U.S. exchanges.

The writing of a call option on a futures contract constitutes a partial hedge against declining prices of the securities in a Portfolio's portfolio. If the futures price at expiration of the option is below the exercise price, a Portfolio will retain the full amount of the option premium, which provides a partial hedge against any decline that may have occurred in the Portfolio's portfolio holdings. The writing of a put option on a futures contract constitutes a partial hedge against increasing prices of the securities or other instruments required to be delivered under the terms of the futures contract. If the futures price at expiration of the put option is higher than the exercise price, a Portfolio will retain the full amount of the option premium, which provides a partial hedge against any increase in the price of securities which the Portfolio intends to purchase. If a put or call option a Portfolio has written is exercised, the Portfolio will incur a loss which will be reduced by the amount of the premium it receives. Depending on the degree of correlation between changes in the value of its portfolio securities and changes in the value of its options on futures positions, a Portfolio's losses from exercised options on futures may to some extent be reduced or increased by changes in the value of portfolio securities.

A Portfolio may purchase options on futures contracts for hedging purposes instead of purchasing or selling the underlying futures contracts. For example, where a decrease in the value of portfolio securities is anticipated as a result of a projected market-wide decline or changes in interest or exchange rates, a Portfolio could, in lieu of selling futures contracts, purchase put options thereon. In the event that such decrease was to occur, it may be offset, in whole or in part, by a profit on the option. If the anticipated market decline were not to occur, the Portfolio would suffer a loss equal to the price of the put. Where it is projected that the value of securities to be acquired by a Portfolio will increase prior to acquisition due to a market advance or changes in interest or exchange rates, a Portfolio could purchase call options on futures contracts, rather than purchasing the underlying futures contracts. If the market advances, the increased cost of securities to be purchased may be offset by a profit on the call. However, if the market declines, the Portfolio will suffer a loss equal to the price of the call, but the securities that the Portfolio intends to purchase may be less expensive.

– **Credit Default Swap Agreements.** The “buyer” in a credit default swap contract is obligated to pay the “seller” a periodic stream of payments over the term of the contract in return for a contingent payment upon the occurrence of a credit event with respect to an underlying reference obligation. Generally, a credit event means bankruptcy, failure to pay, obligation acceleration or restructuring. A Portfolio may be either the buyer or seller in the transaction. As a seller, a Portfolio receives a fixed rate of income throughout the term of the contract, which typically is between one month and ten years, provided that no credit event occurs. If a credit event occurs, a Portfolio, as seller, typically must pay the contingent payment to the buyer. The contingent payment will be either (i) the “par value” (face amount) of the reference obligation in which case the Portfolio will receive the reference obligation in return, or (ii) an amount equal to the difference between the face amount and the current market value of the obligation. As a buyer, if a credit event occurs, the Portfolio would be the receiver of such contingent payments, either delivering the reference obligation in exchange for the full notional

(face) value of a reference obligation that may have little or no value, or receiving a payment equal to the difference between the face amount and the current market value of the obligation.

The value of the reference obligation received by a Portfolio as a seller if a credit event occurs, coupled with the periodic payments previously received, may be less than the full notional value it pays to the buyer, resulting in a loss of value to the Fund. If a Portfolio is a buyer and no credit event occurs, the Portfolio will lose its periodic stream of payments over the term of the contract. However, if a credit event occurs, the buyer typically receives full notional value for a reference obligation that may have little or no value.

Credit default swaps may involve greater risks than if a Portfolio had invested in the reference obligation directly. Credit default swaps are subject to general market risk and credit risk, and may be illiquid.

– **Currency Swaps.** A Portfolio may enter into currency swaps for hedging purposes in an attempt to protect against adverse changes in exchange rates between the U.S. Dollar and other currencies or for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under “Currency Transactions”. Currency swaps involve the exchange by a Portfolio with another party of a series of payments in specified currencies. Currency swaps may involve the exchange of actual principal amounts of currencies by the counterparties at the initiation, and again upon termination of the transaction. Currency swaps may be bilateral and privately negotiated, with the Portfolio expecting to achieve an acceptable degree of correlation between its portfolio investments and its currency swaps positions. A Portfolio will not enter into any currency swap unless the credit quality of the unsecured senior debt or the claims-paying ability of the counterparty thereto is rated in the highest short-term rating category of at least one nationally recognized statistical rating organization (“NRSRO”) at the time of entering into the transaction.

– **Variance Swaps.** Global Risk Allocation—Moderate Portfolio enters into variance swaps from time to time to hedge equity market risk or adjust exposure to the equity markets. Variance swaps are contracts in which two parties agree to exchange cash payments based on the difference between the stated level of variance and the actual variance realized on underlying asset(s) or index(es). Actual “variance” as used here is defined as the sum of the square of the returns on the reference asset(s) or index(es) (which in effect is a measure of its “volatility”) over the length of the contract term.

– **Swaps: Interest Rate Transactions.** A Portfolio may enter into interest rate swap, swaption and cap or floor transactions, which may include preserving a return or spread on a particular investment or portion of its portfolio or protecting against an increase in the price of securities the Portfolio anticipates purchasing at a later date. Unless there is a counterparty default, the risk of loss to a Portfolio from interest rate transactions is limited to the net amount of interest payments that the Portfolio is contractually obligated to make. If the counterparty to an interest rate transaction defaults, the Portfolio’s risk of loss consists of the net amount of interest payments that the Portfolio is contractually entitled to receive.

Interest rate swaps involve the exchange by a Portfolio with another party of payments calculated by reference to specified interest rates (*e.g.*, an exchange of floating-rate

payments for fixed-rate payments) computed based on a contractually-based principal (or “notional”) amount.

An option on a swap agreement, also called a “swaption”, is an option that gives the buyer the right, but not the obligation, to enter into a swap on a future date in exchange for paying a market-based “premium”. A receiver swaption gives the owner the right to receive the total return of a specified asset, reference rate, or index. A payer swaption gives the owner the right to pay the total return of a specified asset, reference rate, or index. Swaptions also include options that allow an existing swap to be terminated or extended by one of the counterparties.

Interest rate caps and floors are similar to options in that the purchase of an interest rate cap or floor entitles the purchaser, to the extent that a specified index exceeds (in the case of a cap) or falls below (in the case of a floor) a predetermined interest rate, to receive payments of interest on a notional amount from the party selling the interest rate cap or floor. It may be more difficult for a Portfolio to trade or close out of interest rate caps and floors in comparison to other types of swaps.

These transactions do not involve the delivery of securities or other underlying assets or principal. A Portfolio will enter into bilateral swap agreements, including interest rate swap, swaptions, cap or floor transactions but excluding currency swaps, which are subject to separate counterparty requirements as addressed above, only with counterparties who have credit ratings of at least A- (or the equivalent) from any one NRSRO or counterparties with guarantors with debt securities having such a rating. For cleared swaps, the Adviser will monitor the creditworthiness of each of the central clearing counterparty, clearing broker and executing broker but there will be no prescribed NRSRO rating requirements for these entities.

—**Total Return Swaps.** A Portfolio may enter into total return swaps in order to take a “long” or “short” position with respect to an underlying referenced asset. The Portfolio is subject to market price volatility of the underlying referenced asset. A total return swap involves commitments to pay interest in exchange for a market-linked return based on a notional amount. To the extent that the total return of the security, group of securities or index underlying the transaction exceeds or falls short of the offsetting interest obligation, the Portfolio will receive a payment or make a payment to the counterparty. Total return swaps may reflect a leveraged investment and incorporate borrowing costs which are borne by the Portfolio. There is no guarantee that the Portfolio’s investment via a total return swap will deliver returns in excess of the embedded borrowing costs and, accordingly, the Portfolio’s performance may be less than would be achieved by a direct investment in the underlying referenced asset.

--*Special Risks Associated with Swaps.* Risks may arise as a result of the failure of the counterparty to a bilateral swap contract to comply with the terms of the swap contract. The loss incurred by the failure of a counterparty is generally limited to the net interim payment to be received by a Portfolio, and/or the termination value at the end of the contract. Therefore, the Portfolio considers the creditworthiness of the counterparty to a bilateral swap contract. The risk is mitigated by having a netting arrangement between the Portfolio and the counterparty and by the posting of collateral by the counterparty to the Portfolio to cover the Portfolio’s exposure to the counterparty.

Additionally, swap values can be highly volatile and expose investors to a high risk of loss. The low initial margin deposits normally required to establish a swap position permit a high degree of leverage. As a result, depending on the type of swap, a relatively small movement in the price of the underlying reference asset or in the market value of the contract may result in a profit or loss which is high in proportion to the amount of funds deposited as initial margin and may result in unquantifiable further loss exceeding any margin initially deposited. Such risks may arise from unanticipated movements in interest rates or in the value of the underlying securities. The Portfolio accrues for the changes in value on swap contracts on a daily basis, with the net amount recorded within unrealized appreciation/depreciation of swap contracts on the statement of assets and liabilities. Once the interim payments are settled in cash, the net amount is recorded as realized gain/(loss) on swaps on the statement of operations, in addition to any realized gain/(loss) recorded upon the termination of swap contracts. Fluctuations in the value of swap contracts are recorded as a component of net change in unrealized appreciation/depreciation of swap contracts on the statement of operations.

Swaps entered into in the OTC market are more likely to be illiquid than exchange-traded instruments as there is no exchange market on which to close out an open OTC swap position. It may therefore be impossible to liquidate an existing position (or to do so at an advantageous price), to assess the value of the position, or to assess the exposure to risk associated with the position.

– **Synthetic Foreign Equity Securities.** A Portfolio may invest in different types of derivatives generally referred to as synthetic foreign equity securities. These securities may include international warrants or local access products. International warrants are financial instruments issued by banks or other financial institutions, which may or may not be traded on a foreign exchange. International warrants are a form of derivative security that may give holders the right to buy or sell an underlying security or a basket of securities representing an index from or to the issuer of the warrant for a particular price or may entitle holders to receive a cash payment relating to the value of the underlying security or index, in each case upon exercise by the Portfolio. Local access products are similar to options in that they are exercisable by the holder for an underlying security or a cash payment based upon the value of that security, but are generally exercisable over a longer term than typical options. These types of instruments may be American style, which means that they can be exercised at any time on or before the expiration date of the international warrant, or European style, which means that they may be exercised only on the expiration date.

Other types of synthetic foreign equity securities in which a Portfolio may invest include covered warrants and low exercise price warrants. Covered warrants entitle the holder to purchase from the issuer, typically a financial institution, upon exercise, common stock of an international company or receive a cash payment (generally in U.S. Dollars). The issuer of the covered warrant usually owns the underlying security or has a mechanism, such as owning equity warrants on the underlying securities, through which they can obtain the securities. The cash payment is calculated according to a predetermined formula, which is generally based on the difference between the value of the underlying security on the date of exercise and the strike price. Low exercise price warrants are warrants with an exercise price that is very low relative to the market price of the underlying instrument at the time of issue (*e.g.*, one cent or less). The buyer of a low exercise price warrant effectively pays the full value of the underlying common

stock at the outset. In the case of any exercise of warrants, there may be a time delay between the time a holder of warrants gives instructions to exercise and the time the price of the common stock relating to exercise or the settlement date is determined, during which time the price of the underlying security could change significantly. In addition, the exercise or settlement date of the warrants may be affected by certain market disruption events, such as difficulties relating to the exchange of a local currency into U.S. Dollars, the imposition of capital controls by a local jurisdiction or changes in the laws relating to foreign investments. These events could lead to a change in the exercise date or settlement currency of the warrants, or postponement of the settlement date. In some cases, if the market disruption events continue for a certain period of time, the warrants may become worthless resulting in a total loss of the purchase price of the warrants.

A Portfolio's investments in synthetic foreign equity securities will only be those issued by entities deemed to be creditworthy by the Adviser, which will monitor the creditworthiness of the issuers on an ongoing basis. Investments in these instruments involve the risk that the issuer of the instrument may default on its obligation to deliver the underlying security or cash in lieu thereof. These instruments may also be subject to illiquid investments risk because there may be a limited secondary market for trading the warrants. They are also subject, like other investments in foreign securities, to foreign risk and currency risk.

International warrants also include equity warrants, index warrants, and interest rate warrants. Equity warrants are generally issued in conjunction with an issue of bonds or shares, although they also may be issued as part of a rights issue or scrip issue. When issued with bonds or shares, they usually trade separately from the bonds or shares after issuance. Most warrants trade in the same currency as the underlying stock (domestic warrants), but also may be traded in different currency (euro-warrants). Equity warrants are traded on a number of foreign exchanges and in OTC markets. Index warrants and interest rate warrants are rights created by an issuer, typically a financial institution, entitling the holder to purchase, in the case of a call, or sell, in the case of a put, respectively, an equity index or a specific bond issue or interest rate index at a certain level over a fixed period of time. Index warrants transactions settle in cash, while interest rate warrants can typically be exercised in the underlying instrument or settle in cash.

A Portfolio also may invest in long-term options of, or relating to, international issuers. Long-term options operate much like covered warrants. Like covered warrants, long-term options are call options created by an issuer, typically a financial institution, entitling the holder to purchase from the issuer outstanding securities of another issuer. Long-term options have an initial period of one year or more, but generally have terms between three and five years. Unlike U.S. options, long-term European options do not settle through a clearing corporation that guarantees the performance of the counterparty. Instead, they are traded on an exchange and subject to the exchange's trading regulations.

– **Eurodollar Instruments.** Eurodollar instruments are essentially U.S. Dollar-denominated futures contracts or options thereon that are linked to the London Interbank Offered Rate ("LIBOR") and are subject to the same limitations and risks as other futures contracts and options. In July 2017, the United Kingdom Financial Conduct Authority, which regulates

LIBOR, announced a desire to phase out the use of LIBOR by the end of 2021. See “LIBOR Transition and Associated Risk” in the Portfolios’ Prospectus for additional information.

– **Currency Transactions.** A Portfolio may invest in non-U.S. Dollar-denominated securities on a currency hedged or un-hedged basis. The Adviser may actively manage a Portfolio’s currency exposures and may seek investment opportunities by taking long or short positions in currencies through the use of currency-related derivatives, including forward currency exchange contracts, futures contracts and options on futures contracts, swaps and options. The Adviser may enter into transactions for investment opportunities when it anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by a Portfolio and do not present attractive investment opportunities. Such transactions may also be used when the Adviser believes that it may be more efficient than a direct investment in a foreign currency-denominated security. The Portfolios may also conduct currency exchange contracts on a spot basis (*i.e.*, for cash at the spot rate prevailing in the currency exchange market for buying or selling currencies).

Event-linked Securities

Event-linked securities are variable rate or fixed rate fixed-income securities or types of equity securities for which the return of principal and payment of interest are contingent on the non-occurrence of various catastrophe exposures, which may be specific trigger events or a diversified group of events, such as hurricanes, typhoons, wind events or earthquakes. The most common type of fixed-income securities are known as “catastrophe” or “CAT” bonds. In some cases, the trigger event(s) will not be deemed to have occurred unless the event(s) happened in a particular geographic area and was of a certain magnitude (based on independent scientific readings) or caused a certain amount of actual or modeled loss. If the trigger event(s) occurs prior to the securities’ maturity, a Portfolio may lose all or a portion of its principal and forgo additional interest.

These securities may have a special condition that states that if the issuer (*i.e.*, an insurance or reinsurance company) suffers a loss from a particular pre-defined catastrophe, then the issuer’s obligation to pay interest and/or repay the principal is either deferred or completely forgiven. For example, if a Portfolio holds a fixed-income security that covers an insurer’s losses due to a hurricane with a “trigger” at \$1 billion and a hurricane hits causing \$1 billion or more in losses to such insurer, then the Portfolio will lose all or a portion of its principal invested in the security and forgo any future interest payments. If the trigger event(s) does not occur, the Portfolio will recover its principal plus interest. Interest typically accrues and is paid on a quarterly basis. Although principal typically is repaid only on the maturity date, it may be repaid in installments, depending on the terms of the securities.

Event-linked securities may be issued by government agencies, insurance companies, reinsurers, special purpose companies or other on-shore or off-shore entities. Event-linked securities are a relatively new type of financial instrument. As a result, there is no significant trading history of these securities and these securities may be illiquid or the markets for these instruments may not be liquid at all times. These securities may be rated, generally below investment grade or the unrated equivalent, and have the same or equivalent risks as higher yield debt securities (“junk bonds”). The rating primarily reflects the rating agency’s

calculated probability that a pre-defined trigger event will occur as well as the overall expected loss to the principal of the security.

Forward Commitments and When-Issued and Delayed Delivery Securities

Forward commitments for the purchase or sale of securities may include purchases on a “when-issued” basis or purchases or sales on a “delayed delivery” basis. In some cases, a forward commitment may be conditioned upon the occurrence of a subsequent event, such as approval and consummation of a merger, corporate reorganization or debt restructuring (*i.e.*, a “when, as and if issued” trade). When forward commitment transactions are negotiated, the price is fixed at the time the commitment is made. A Portfolio assumes the rights and risks of ownership of the security, but does not pay for the securities until they are received. If a Portfolio is fully or almost fully invested when forward commitment purchases are outstanding, such purchases may result in a form of leverage. Leveraging the portfolio in this manner may increase the Portfolio’s volatility of returns.

The use of forward commitments enables a Portfolio to protect against anticipated changes in exchange rates, interest rates and/or prices. For instance, a Portfolio may enter into a forward contract when it enters into a contract for the purchase or sale of a security denominated in a foreign currency in order to “lock in” the U.S. Dollar price of the security (“transaction hedge”). In addition, when a Portfolio believes that a foreign currency may suffer a substantial decline against the U.S. Dollar, it may enter into a forward sale contract to sell an amount of that foreign currency approximating the value of some or all of that Portfolio’s securities denominated in such foreign currency, or when a Portfolio believes that the U.S. Dollar may suffer a substantial decline against a foreign currency, it may enter into a forward purchase contract to buy that foreign currency for a fixed dollar amount (“position hedge”). If the Adviser were to forecast incorrectly the direction of exchange rate movements, a Portfolio might be required to complete or settle when-issued or forward transactions at prices inferior to the then current market values.

When-issued securities and forward commitments may be sold prior to the settlement date, but a Portfolio generally enters into when-issued and forward commitments only with the intention of actually receiving securities or delivering them, as the case may be. If a Portfolio chooses to dispose of the right to acquire a when-issued security prior to its acquisition or dispose of its right to deliver or receive against a forward commitment, it may incur a gain or loss. Any significant commitment of a Portfolio’s assets to the purchase of securities on a “when, as and if issued” basis may increase the volatility of the Portfolio’s NAV.

At the time a Portfolio enters into a forward commitment, it will record the transaction and thereafter reflect the value of the security purchased or, if a sale, the proceeds to be received, in determining its NAV. Any unrealized appreciation or depreciation reflected in such valuation of a “when, as and if issued” security would be canceled in the event that the required conditions did not occur and the trade was canceled.

Purchases of securities on a forward commitment or when-issued basis may involve more risk than other types of purchases. For example, by committing to purchase securities in the future, a Portfolio subjects itself to a risk of loss on such commitments as well as

on its portfolio securities. Also, a Portfolio may have to sell assets which have been set aside in order to meet redemptions. In addition, if a Portfolio determines it is advisable as a matter of investment strategy to sell the forward commitment or “when-issued” or “delayed delivery” securities before delivery, that Portfolio may incur a gain or loss because of market fluctuations since the time the commitment to purchase such securities was made. Any such gain or loss would be treated as a capital gain or loss for tax purposes. When the time comes to pay for the securities to be purchased under a forward commitment or on a “when-issued” or “delayed delivery” basis, a Portfolio will meet its obligations from the then available cash flow or the sale of securities, or, although it would not normally expect to do so, from the sale of the forward commitment or “when-issued” or “delayed delivery” securities themselves (which may have a value greater or less than the Portfolio’s payment obligation). No interest or dividends accrue to the purchaser prior to the settlement date for securities purchased or sold under a forward commitment. In addition, in the event the other party to the transaction files for bankruptcy, becomes insolvent, or defaults on its obligation, a Portfolio may be adversely affected.

Illiquid Securities

A Portfolio will not invest in illiquid securities if immediately after such investment more than 15% of the Portfolio’s net assets would be invested in such securities. Under Rule 22e-4 under the 1940 Act, the term illiquid securities means any security or investment that a Portfolio reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment.

Mutual funds do not typically hold a significant amount of restricted securities (securities that are subject to restrictions on resale to the general public) or other illiquid securities because of the potential for delays on resale and uncertainty in valuation. Limitations on resale may have an adverse effect on the marketability of portfolio securities and a mutual fund might be unable to dispose of restricted or other illiquid securities promptly or at reasonable prices and might thereby experience difficulty satisfying redemptions within seven days. A mutual fund may also have to take certain steps or wait a certain amount of time in order to remove the transfer restrictions for such restricted securities in order to dispose of them, resulting in additional expense and delay.

Rule 144A under the Securities Act of 1933, as amended (the “Securities Act”), allows a broader institutional trading market for securities otherwise subject to restriction on resale to the general public. Rule 144A establishes a “safe harbor” from the registration requirements of the Securities Act for resales of certain securities to qualified institutional buyers (“Rule 144A Securities”). The Portfolios have adopted a liquidity risk management program pursuant to Rule 22e-4 under the 1940 Act (the “LRM Program”) and related procedures to categorize each Portfolio’s investments, including Rule 144A Securities, and identify illiquid investments. The LRM Program’s administrator will take into account relevant market, trading and investment-specific considerations in doing so. An insufficient number of qualified institutional buyers interested in purchasing certain restricted securities held by a Portfolio, however, could affect adversely the marketability of such portfolio securities and the Portfolio might be unable to dispose of such securities promptly or at reasonable prices.

Investments in Pre-IPO Securities

The Portfolios may invest in pre-IPO (initial public offering) securities. Pre-IPO securities, or venture capital investments, are investments in new and early stage companies, often funded by venture capital and referred to as “venture capital companies”, whose securities have not been offered to the public and that are not publicly traded. These investments may present significant opportunities for capital appreciation but involve a high degree of risk that may result in significant decreases in the value of these investments. Venture capital companies may not have established products, experienced management or earnings history. The Portfolios may not be able to sell such investments when the portfolio managers and/or investment personnel deem it appropriate to do so because they are not publicly traded. As such, these investments are generally considered to be illiquid until a company’s public offering (which may never occur) and are often subject to additional contractual restrictions on resale following any public offering that may prevent the Portfolios from selling their shares of these companies for a period of time. Market conditions, developments within a company, investor perception or regulatory decisions may adversely affect a venture capital company and delay or prevent a venture capital company from ultimately offering its securities to the public.

Investment in Exchange-Traded Funds and Other Investment Companies

The Portfolios may invest in shares of ETFs, subject to the restrictions and limitations of the 1940 Act or any applicable rules, exemptive orders or regulatory guidance. ETFs are pooled investment vehicles that seek to track the performance of a specific index or implement actively-managed investment strategies. Index ETFs will not track their underlying indices precisely since the ETFs have expenses and may need to hold a portion of their assets in cash, unlike the underlying indices, and the ETFs may not invest in all of the securities in the underlying indices in the same proportion as the underlying indices for various reasons. The Portfolios will incur transaction costs when buying and selling ETF shares, and indirectly bear the expenses of the ETFs. In addition, the market value of an ETF’s shares, which is based on supply and demand in the market for the ETF’s shares, may differ from its NAV. Accordingly, there may be times when an ETF’s shares trade at a discount to its NAV.

The Portfolios may also invest in investment companies other than ETFs as permitted by the 1940 Act or the rules and regulations or exemptive orders thereunder. As with ETF investments, if the Portfolios acquire shares in other investment companies, shareholders would bear, indirectly, the expenses of such investment companies (which may include management and advisory fees), which to the extent not waived or reimbursed, would be in addition to the Portfolios’ expenses. The Portfolios intend to invest uninvested cash balances in an affiliated money market fund as permitted by Rule 12d1-1 under the 1940 Act. A Portfolio’s investment in other investment companies, including ETFs, subjects the Portfolio indirectly to the underlying risks of those investment companies.

Loans of Portfolio Securities

A Portfolio may seek to increase income by lending portfolio securities to brokers, dealers, and financial institutions (“borrowers”) to the extent permitted under the 1940 Act or the rules or regulations thereunder (as such statute, rules, or regulations may be amended

from time to time) or by guidance regarding interpretations of or exemptive orders under the 1940 Act. Under a Portfolio's securities lending program, all securities loans will be secured continuously by cash collateral and/or non-cash collateral. Non-cash collateral will include only securities issued or guaranteed by the U.S. Government or one of its agencies or instrumentalities. A principal risk in lending portfolio securities is that the borrower will fail to return the loaned securities upon termination of the loan, and that the value of the collateral will not be sufficient to replace the loaned securities upon the borrower's default.

In determining whether to lend securities to a particular borrower, the Adviser (subject to oversight by the Board) will consider all relevant facts and circumstances, including the creditworthiness of the borrower. The loans will be made only to borrowers deemed by the Adviser to be creditworthy, and when, in the judgment of the Adviser, the consideration that can be earned currently from securities loans justifies the attendant risk. If a loan is collateralized by cash, a Portfolio will be compensated for the loan from a portion of the net return from the interest earned on cash collateral after a rebate paid to the borrower (in some cases, this rebate may be a "negative rebate", or fee paid by the borrower to the Portfolio in connection with the loan). If a Portfolio receives non-cash collateral, the Portfolio will receive a fee from the borrower generally equal to a negotiated percentage of the market value of the loaned securities. For its services, the securities lending agent receives a fee from the Portfolio.

A Portfolio will have the right to call a loan and obtain the securities loaned at any time on notice to the borrower within the normal and customary settlement time for the securities. While the securities are on loan, the borrower is obligated to pay the Portfolio amounts equal to any income or other distributions from the securities.

A Portfolio will not have the right to vote any securities during the existence of a loan, but will have the right to regain ownership of loaned securities in order to exercise voting or other ownership rights. When the Fund lends securities, its investment performance will continue to reflect changes in the value of the securities loaned.

A Portfolio will invest cash collateral in a money market fund approved by the Board and expected to be managed by the Adviser. Any such investment will be at the Portfolio's risk. A Portfolio may pay reasonable finders', administrative, and custodial fees in connection with a loan.

Mortgage-Related Securities, Other Asset-Backed Securities and Structured Securities

The mortgage-related securities in which a Portfolio may invest typically are securities representing interests in pools of mortgage loans made by lenders such as savings and loan associations, mortgage bankers and commercial banks and are assembled for sale to investors (such as a Portfolio) by governmental, government-related or private organizations. Private organizations include commercial banks, savings associations, mortgage companies, investment banking firms, finance companies, special purpose finance entities (called special purpose vehicles or SPVs) and other entities that acquire and package loans for resales as mortgage-related securities. Specifically, these securities may include pass-through mortgage-related securities, collateralized mortgage obligations ("CMOs"), CMO residuals, adjustable-rate

mortgage securities (“ARMS”), stripped mortgage-backed securities (“SMBs”), commercial mortgage-backed securities, TBA mortgage-backed securities, mortgage dollar rolls, collateralized obligations, Canadian Government Guaranteed Mortgage Related Securities and other securities that directly or indirectly represent a participation in or are secured by and payable from mortgage loans on real property and other assets.

Pass-Through Mortgage-Related Securities. Interests in pools of mortgage-related securities differ from other forms of debt securities, which normally provide for periodic payment of interest in fixed amounts with principal payments at maturity or specified call dates. Instead, these securities provide a monthly payment consisting of both interest and principal payments. In effect, these payments are a “pass-through” of the monthly payments made by the individual borrowers on their residential mortgage loans, net of any fees paid to the issuer or guarantor of such securities. Additional payments are caused by repayments of principal resulting from the sale of the underlying residential property, refinancing or foreclosure, net of fees or costs that may be incurred. Some mortgage-related securities, such as securities issued by Government National Mortgage Association (“GNMA”), are described as “modified pass-through”. These securities entitle the holder to receive all interest and principal payments owed on the mortgage pool, net of certain fees, regardless of whether or not the mortgagor actually makes the payment.

The average life of pass-through pools varies with the maturities of the underlying mortgage instruments. In addition, a pool’s term may be shortened by unscheduled or early payments of principal and interest on the underlying mortgages. The occurrence of mortgage prepayments is affected by factors including the level of interest rates, general economic conditions, the location and age of the mortgage and other social and demographic conditions. As prepayment rates of individual pools vary widely, it is not possible to accurately predict the average life of a particular pool. For pools of fixed-rate 30-year mortgages, common industry practice is to assume that prepayments will result in a 12-year average life. Pools of mortgages with other maturities or different characteristics will have varying average life assumptions. The assumed average life of pools of mortgages having terms of less than 30 years, is less than 12 years, but typically not less than 5 years.

Yields on pass-through securities are typically quoted by investment dealers and vendors based on the maturity of the underlying instruments and the associated average life assumption. In periods of falling interest rates, the rate of prepayment tends to increase, thereby shortening the actual average life of a pool of mortgage-related securities. Conversely, in periods of rising interest rates the rate of prepayment tends to decrease, thereby lengthening the actual average life of the pool. Historically, actual average life has been consistent with the 12-year assumption referred to above. Actual prepayment experience may cause the yield to differ from the assumed average life yield. Reinvestment of prepayments may occur at higher or lower interest rates than the original investment, thus affecting the yield of a Portfolio. The compounding effect from reinvestment of monthly payments received by a Portfolio will increase the yield to shareholders compared with bonds that pay interest semi-annually.

The principal governmental (*i.e.*, backed by the full faith and credit of the U.S. Government) guarantor of mortgage-related securities is GNMA. GNMA is a wholly-owned U.S. Government corporation within the Department of Housing and Urban Development.

GNMA is authorized to guarantee, with the full faith and credit of the U.S. Government, the timely payment of principal and interest on securities issued by institutions approved by GNMA (such as savings and loan institutions, commercial banks and mortgage bankers) and backed by pools of Federal Housing Administration-insured or U.S. Department of Veterans Affairs-guaranteed mortgages.

Government-related (*i.e.*, not backed by the full faith and credit of the U.S. Government) guarantors include the Federal National Mortgage Association (“FNMA”) and the Federal Home Loan Mortgage Corporation (“FHLMC”). FNMA and FHLMC are a government-sponsored corporation and corporate instrumentality of the U.S. Government, respectively, (government-sponsored entities or “GSEs”), which were owned entirely by private stockholders until 2008 when they were placed in conservatorship by the U.S. Government. After being placed in conservatorship, the GSEs issued senior preferred stock and common stock to the U.S. Department of the Treasury (“U.S. Treasury”) in an amount equal to 79.9% of each GSE in return for certain funding and liquidity arrangements. The GSEs continue to operate as going concerns while in conservatorship and each remains liable for all of its obligations associated with its mortgage-backed securities. The U.S. Treasury provided additional funding to the GSEs, but the GSEs have paid dividends to the U.S. Treasury in a cumulative amount that exceeds the payments made to the GSEs by the U.S. Treasury since 2008. The future of the GSEs is unclear as Congress is considering whether to adopt legislation that would severely restrict or even terminate their operations. FNMA purchases residential mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA. Participation certificates issued by FHLMC, which represent interests in mortgages from FHLMC’s national portfolio, are guaranteed by FHLMC as to the timely payment of interest and ultimate collection of principal.

Commercial banks, savings and loan associations, private mortgage insurance companies, mortgage bankers and other secondary market issuers create pass-through pools of conventional residential mortgage loans. Securities representing interests in pools created by non-governmental private issuers generally offer a higher rate of interest than securities representing interests in pools created by governmental issuers because there are no direct or indirect governmental guarantees of the underlying mortgage payments. However, private issuers sometimes obtain committed loan facilities, lines of credit, letters of credit, surety bonds or other forms of liquidity and credit enhancement to support the timely payment of interest and principal with respect to their securities if the borrowers on the underlying mortgages fail to make their mortgage payments. The ratings of such non-governmental securities are generally dependent upon the ratings of the providers of such liquidity and credit support and would be adversely affected if the rating of such an enhancer were downgraded.

The structuring of the pass-through pool may also provide credit enhancement. Examples of such credit support arising out of the structure of the transaction include the issue of senior and subordinated securities (*e.g.*, the issuance of securities by a SPV in multiple classes or “tranches”, with one or more classes being senior to other subordinated classes as to payment of principal and interest, with the result that defaults on the underlying mortgage loans are borne first by the holders of the subordinated class); creation of “reserve funds” (in which case cash or

investments sometimes funded from a portion of the payments on the underlying mortgage loans, are held in reserve against future losses); and “overcollateralization” (in which case the scheduled payments on, or the principal amount of, the underlying mortgage loans exceeds that required to make payment of the securities and pay any servicing or other fees). There can be no guarantee the credit enhancements, if any, will be sufficient to prevent losses in the event of defaults on the underlying mortgage loans.

In addition, mortgage-related securities that are issued by private issuers are not subject to the underwriting requirements for the underlying mortgages that are applicable to those mortgage-related securities that have a government or GSE guaranteed. As a result, the mortgage loans underlying private mortgage-related securities may, and frequently do, have less favorable collateral, credit risk or other underwriting characteristics than government or government-sponsored mortgage-related securities and have wider variances in a number of terms, including interest rate, term, size, purposes and borrower characteristics. Privately-issued pools more frequently include second mortgages, high loan-to-value mortgages and manufactured housing loans. The coupon rates and maturities of the underlying mortgage loans in a private-label mortgage-related pool may vary to a greater extent than those included in a government guaranteed pool, and the pool may include subprime mortgage loans. Subprime loans refer to loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments on their loans. For these reasons, the loans underlying these securities have had in many cases higher default rates than those loans that meet government underwriting requirements.

Collateralized Mortgage Obligations. Another form of mortgage-related security is a “pay-through” security, which is a debt obligation of the issuer secured by a pool of mortgage loans pledged as collateral that is legally required to be paid by the issuer, regardless of whether payments are actually made on the underlying mortgages. CMOs are the predominant type of “pay-through” mortgage-related security. In a CMO, a series of bonds or certificates is issued in multiple classes. Each class of a CMO, often referred to as a “tranche”, is issued at a specific coupon rate and has a stated maturity or final distribution date. Principal prepayments on collateral underlying a CMO may cause one or more tranches of the CMO to be retired substantially earlier than the stated maturities or final distribution dates of the collateral. Although payment of the principal of, and interest on, the underlying collateral securing privately issued CMOs may be guaranteed by GNMA, FNMA or FHLMC, these CMOs represent obligations solely of the private issuer and are not insured or guaranteed by GNMA, FNMA, FHLMC, any other governmental agency or any other person or entity.

Adjustable-Rate Mortgage Securities. ARMS bear interest at a rate determined by reference to a predetermined interest rate or index. ARMS may be secured by fixed-rate mortgages or adjustable-rate mortgages. ARMS secured by fixed-rate mortgages generally have lifetime caps on the coupon rates of the securities. To the extent that general interest rates increase faster than the interest rates on the ARMS, these ARMS will decline in value. The adjustable-rate mortgages that secure ARMS will frequently have caps that limit the maximum amount by which the interest rate or the monthly principal and interest payments on the mortgages may increase. These payment caps can result in negative amortization (*i.e.*, an increase in the balance of the mortgage loan). Furthermore, since many adjustable-rate mortgages only reset on an annual basis, the values of ARMS tend to fluctuate to the extent that

changes in prevailing interest rates are not immediately reflected in the interest rates payable on the underlying adjustable-rate mortgages.

Stripped Mortgage-Related Securities. Stripped mortgage-related securities (“SMRS”) are mortgage-related securities that are usually structured with separate classes of securities collateralized by a pool of mortgages or a pool of mortgage-backed bonds or pass-through securities, with each class receiving different proportions of the principal and interest payments from the underlying assets. A common type of SMRS has one class of interest-only securities (“IOs”) receiving all of the interest payments from the underlying assets and one class of principal-only securities (“POs”) receiving all of the principal payments from the underlying assets. IOs and POs are extremely sensitive to interest rate changes and are more volatile than mortgage-related securities that are not stripped. IOs tend to decrease in value as interest rates decrease and are extremely sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets, and a rapid rate of principal prepayments may have a material adverse effect on the yield to maturity of the IO class. POs generally increase in value as interest rates decrease. If prepayments of the underlying mortgages are greater than anticipated, the amount of interest earned on the overall pool will decrease due to the decreasing principal balance of the assets. Due to their structure and underlying cash flows, SMRS may be more volatile than mortgage-related securities that are not stripped. Changes in the values of IOs and POs can be substantial and occur quickly, such as occurred in the first half of 1994 when the value of many POs dropped precipitously due to increases in interest rates.

With respect to residential mortgage related SMRS, a Portfolio will only invest in such SMRS that are issued by the U.S. Government, its agencies or instrumentalities and supported by the full faith and credit of the United States or by other U.S. Government-sponsored entities. Although SMRS are purchased and sold by institutional investors through several investment banking firms acting as brokers or dealers, the complexity of these instruments and the smaller number of investors in the sector can lend to illiquid markets in the sector.

Commercial Mortgage-Backed Securities. Commercial mortgage-backed securities are securities that represent an interest in, or are secured by, mortgage loans secured by multifamily or commercial properties, such as industrial and warehouse properties, office buildings, retail space and shopping malls, and cooperative apartments, hotels and motels, nursing homes, hospitals and senior living centers. Commercial mortgage-backed securities have been issued in public and private transactions by a variety of public and private issuers using a variety of structures, some of which were developed in the residential mortgage context, including multi-class structures featuring senior and subordinated classes. Commercial mortgage-backed securities may pay fixed or floating rates of interest. The commercial mortgage loans that underlie commercial mortgage-related securities have certain distinct risk characteristics. Commercial mortgage loans generally lack standardized terms, which may complicate their structure, tend to have shorter maturities than residential mortgage loans and may not be fully amortizing. Commercial properties themselves tend to be unique and are more difficult to value than single-family residential properties. In addition, commercial properties, particularly industrial and warehouse properties, are subject to environmental risks and the burdens and costs of compliance with environmental laws and regulations.

Certain Risks. The value of mortgage-related securities is affected by a number of factors. Unlike traditional debt securities, which have fixed maturity dates, mortgage-related securities may be paid earlier than expected as a result of prepayments of underlying mortgages. Such prepayments generally occur during periods of falling mortgage interest rates. If property owners make unscheduled prepayments of their mortgage loans, these prepayments will result in the early payment of the applicable mortgage-related securities. In that event, a Portfolio may be unable to invest the proceeds from the early payment of the mortgage-related securities in investments that provide as high a yield as the mortgage-related securities. Early payments associated with mortgage-related securities cause these securities to experience significantly greater price and yield volatility than is experienced by traditional fixed-income securities. The level of general interest rates, general economic conditions and other social and demographic factors affect the occurrence of mortgage prepayments. During periods of falling interest rates, the rate of mortgage prepayments tends to increase, thereby tending to decrease the life of mortgage-related securities. Conversely, during periods of rising interest rates, a reduction in prepayments may increase the effective life of mortgage-related securities, subjecting them to greater risk of decline in market value in response to rising interest rates. If the life of a mortgage-related security is inaccurately predicted, the Portfolio may not be able to realize the rate of return it expected.

As with other fixed-income securities, there is also the risk of nonpayment of mortgage-related securities, particularly for those securities that are backed by mortgage pools that contain subprime loans. Market factors adversely affecting mortgage loan repayments include a general economic downturn, high unemployment, a general slowdown in the real estate market, a drop in the market prices of real estate, or higher mortgage payments required to be made by holders of adjustable rate mortgages due to scheduled increases or increases due to higher interest rates. To the extent a Portfolio invests in mortgage-related securities whose underlying mortgages include subprime or non-performing loans, the risk of default is generally greater.

Subordinated mortgage-related securities may have additional risks. The subordinated mortgage-related security may serve as credit support for the senior securities purchased by other investors. In addition, the payments of principal and interest on these subordinated securities generally will be made only after payments are made to the holders of securities senior to the subordinated securities. Therefore, if there are defaults on the underlying mortgage loans, the holders of subordinated mortgage-related securities will be less likely to receive payments of principal and interest and will be more likely to suffer a loss.

Commercial mortgage-related securities, like all fixed-income securities, generally decline in value as interest rates rise. Moreover, although generally the value of fixed-income securities increases during periods of falling interest rates, this inverse relationship is not as marked in the case of single-family residential mortgage-related securities, due to the increased likelihood of prepayments during periods of falling interest rates, and may not be as marked in the case of commercial mortgage-related securities. The process used to rate commercial mortgage-related securities may focus on, among other factors, the structure of the security, the quality and adequacy of collateral and insurance, and the creditworthiness of the originators, servicing companies and providers of credit support.

Although the market for mortgage-related securities is becoming increasingly liquid, those issued by certain private organizations may not be readily marketable. There may be a limited market for these securities, especially when there is a perceived weakness in the mortgage and real estate market sectors. In particular, the secondary markets for CMOs, IOs and POs may be more volatile and less liquid than those for other mortgage-related securities, thereby potentially limiting a Portfolio's ability to buy or sell those securities at any particular time. Without an active trading market, mortgage-related securities held in the Portfolio's portfolio may be particularly difficult to value because of the complexities involved in the value of the underlying mortgages. In addition, the rating agencies may have difficulties in rating commercial mortgage-related securities through different economic cycles and in monitoring such ratings on a longer-term basis.

As with fixed-income securities generally, the value of mortgage-related securities can also be adversely affected by increases in general interest rates relative to the yield provided by such securities. Such an adverse effect is especially possible with fixed-rate mortgage securities. If the yield available on other investments rises above the yield of the fixed-rate mortgage securities as a result of general increases in interest rate levels, the value of the mortgage-related securities will decline.

GSE Risk-Sharing Bonds. Another type of mortgage-related security, known as GSE Risk-Sharing Bonds or Credit Risk Transfer securities ("CRTs"), transfers a portion of the risk of borrower defaults from the issuing GSE to investors through the issuance of a bond whose return of principal is linked to the performance of a selected pool of mortgages. CRTs are issued by GSEs (and sometimes banks or mortgage insurers) and structured without any government or GSE guarantee in respect of borrower defaults or underlying collateral. Typically, CRTs are issued at par and have stated final maturities. CRTs are structured so that: (i) interest is paid directly by the issuing GSE and (ii) principal is paid by the issuing GSE in accordance with the principal payments and default performance of a certain pool of residential mortgage loans acquired by the GSE.

The risks associated with an investment in CRTs differ from the risks associated with an investment in mortgage-backed securities issued by GSEs because, in CRTs, some or all of the credit risk associated with the underlying mortgage loans is transferred to the end-investor. As a result, in the event that a GSE fails to pay principal or interest on a CRT or goes through bankruptcy, insolvency or similar proceeding, holders of such CRT have no direct recourse to the underlying mortgage loans.

Other Asset-Backed Securities. A Portfolio may invest in other asset-backed securities, including interests in pools of lower-rated debt securities and corporate and consumer loans (including non-performing loans), among other things. Like mortgage-backed securities, these securities are pass-through, and the collateral supporting these securities generally is of shorter maturity.

The securitization techniques used to develop mortgage-related securities are being applied to a broad range of financial assets. Through the use of trusts and special purpose corporations, various types of assets, including automobile loans and leases, credit card receivables, home equity loans, equipment leases and trade receivables, are being securitized in

structures similar to the structures used in mortgage securitizations. For example, a Portfolio may invest in collateralized debt obligations (“CDOs”), which include collateralized bond obligations (“CBOs”), collateralized loan obligations (“CLOs”), and other similarly structured securities. CBOs and CLOs are types of asset-backed securities. A CBO is a trust, which is backed by a diversified pool of high-risk, below investment grade fixed-income securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. These asset-backed securities are subject to risks associated with changes in interest rates, prepayment of underlying obligations and defaults similar to the risks of investment in mortgage-related securities discussed above.

Each type of asset-backed security also entails unique risks depending on the type of assets involved and the legal structure used. For example, credit card receivables are generally unsecured obligations of the credit card holder and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which give such debtors the right to set off certain amounts owed on the credit cards, thereby reducing the balance due. There have also been proposals to cap the interest rate that a credit card issuer may charge. In some transactions, the value of the asset-backed security is dependent on the performance of a third party acting as credit enhancer or servicer. Furthermore, in some transactions (such as those involving the securitization of vehicle loans or leases) it may be administratively burdensome to perfect the interest of the security issuer in the underlying collateral and the underlying collateral may become damaged or stolen.

Structured Securities. A Portfolio may invest in securities issued in structured financing transactions, which generally involve aggregating types of debt assets in a pool or special purpose entity and then issuing new securities. Types of structured financings include, for example, mortgage-related and other asset-backed securities. A Portfolio’s investments include investments in structured securities that represent interests in entities organized and operated solely for the purpose of restructuring the investment characteristics of debt obligations. This type of restructuring involves the deposit with or purchase by an entity, such as a corporation or trust, of specified instruments (such as commercial bank loans) and the issuance by that entity of one or more classes of securities (“Structured Securities”) backed by, or representing interests in, the underlying instruments. The cash flow on the underlying instruments may be apportioned among the newly issued Structured Securities to create securities with different investment characteristics such as varying maturities, payment priorities and interest rate provisions, and the extent of the payments made with respect to Structured Securities is dependent on the extent of the cash flow on the underlying instruments. Because Structured Securities of the type in which a Portfolio anticipates it will invest typically involve no credit enhancement, their credit risk generally will be equivalent to that of the underlying instruments.

A Portfolio is permitted to invest in a class of Structured Securities that is either subordinated or unsubordinated to the right of payment of another class. Subordinated Structured Securities typically have higher yields and present greater risks than unsubordinated Structured Securities.

Under the terms of subordinated securities, payments that would be made to their holders may be required to be made to the holders of more senior securities and/or the subordinated or junior securities may have junior liens, if they have any rights at all, in any collateral (meaning proceeds of the collateral are required to be paid first to holders of more senior securities). As a result, subordinated or junior securities will be disproportionately affected by a default or even a perceived decline in the creditworthiness of the issuer.

Preferred Stock

A Portfolio may invest in preferred stock. Preferred stock is an equity security that has features of debt because it generally entitles the holder to periodic payments at a fixed rate of return. Preferred stock is subordinated to any debt the issuer has outstanding but has liquidation preference over common stock. Accordingly, preferred stock dividends are not paid until all debt obligations are first met. Preferred stock may be subject to more fluctuations in market value, due to changes in market participants' perceptions of the issuer's ability to continue to pay dividends, than debt of the same issuer.

Real Estate Investment Trusts

Real Estate Investment Trusts ("REITs") are pooled investment vehicles that invest primarily in income-producing real estate or real estate related loans or interests. REITs are generally classified as equity REITs, mortgage REITs or a combination of equity and mortgage REITs. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of principal and interest and payments. Similar to investment companies, such as the Portfolios, REITs are not taxed on income distributed to shareholders provided they comply with several requirements of the United States Internal Revenue Code of 1986, as amended (the "Code"). A Portfolio will indirectly bear its proportionate share of expenses incurred by REITs in which the Portfolio invests in addition to the expenses incurred directly by the Portfolio.

Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. Equity REITs may be affected by changes in the value of the underlying property owned by the REITs, while mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skills, are not diversified, and are subject to heavy cash flow dependency, default by borrowers and self-liquidation.

Investing in REITs involves risks similar to those associated with investing in small-capitalization companies. REITs may have limited financial resources, may trade less frequently and in a limited volume and may be subject to more abrupt or erratic price movements than larger company securities. Historically, small-capitalization stocks, such as REITs, have had more price volatility than larger capitalization stocks.

REITs are subject to the possibilities of failing to qualify for tax-free pass-through of income under the Code and failing to maintain their exemptions from registration under the

1940 Act. REITs (especially mortgage REITs) also are subject to interest rate risks. When interest rates decline, the value of a REIT's investment in fixed-rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed-rate obligations can be expected to decline. In contrast, as interest rates on adjustable-rate mortgage loans are reset periodically, yields on a REIT's investments in such loans will gradually align themselves to reflect changes in market interest rates, causing the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed-rate obligations.

Repurchase Agreements and Buy/Sell Back Transactions

A repurchase agreement is an agreement by which a Portfolio purchases a security and obtains a simultaneous commitment from the seller to repurchase the security at an agreed-upon price and date, normally one day or a week later. The purchase and repurchase obligations are transacted under one document. The resale price is greater than the purchase price, reflecting an agreed-upon "interest rate" that is effective for the period of time the buyer's money is invested in the security, and which is related to the current market rate of the purchased security rather than its coupon rate. During the term of a repurchase agreement, a Portfolio monitors on a daily basis the market value of the securities subject to the agreement and, if the market value of the securities falls below the resale amount provided under the repurchase agreement, the seller under the repurchase agreement is required to provide additional securities or cash equal to the amount by which the market value of the securities falls below the resale amount. Because a repurchase agreement permits a Portfolio to invest temporarily available cash on a fully-collateralized basis, repurchase agreements permit the Portfolio to earn a return on temporarily available cash while retaining "overnight" flexibility in pursuit of investments of a longer-term nature. Repurchase agreements may exhibit the characteristics of loans by a Portfolio.

The obligation of the seller under the repurchase agreement is not guaranteed, and there is a risk that the seller may fail to repurchase the underlying security, whether because of the seller's bankruptcy or otherwise. In such event, a Portfolio would attempt to exercise its rights with respect to the underlying security, including possible sale of the securities. A Portfolio may incur various expenses in connection with the exercise of its rights and may be subject to various delays and risks of loss, including (a) possible declines in the value of the underlying securities, (b) possible reduction in levels of income and (c) lack of access to the securities (if they are held through a third-party custodian) and possible inability to enforce the Portfolio's rights. The Board has established procedures, which are periodically reviewed by the Board, pursuant to which the Adviser monitors the creditworthiness of the dealers with which the Portfolio enters into repurchase agreement transactions.

A Portfolio may enter into buy/sell back transactions, which are similar to repurchase agreements. In this type of transaction, a Portfolio enters a trade to buy securities at one price and simultaneously enters a trade to sell the same securities at another price on a specified date. Similar to a repurchase agreement, the repurchase price is higher than the sale price and reflects current interest rates. Unlike a repurchase agreement, however, the buy/sell back transaction, though done simultaneously, constitutes two separate legal agreements. A buy/sell back transaction also differs from a repurchase agreement in that the seller is not required to provide margin payments if the value of the securities falls below the repurchase

price because the transaction constitutes two separate transactions. A Portfolio has the risk of changes in the value of the purchased security during the term of the buy/sell back agreement although these agreements typically provide for the repricing of the original transaction at a new market price if the value of the security changes by a specific amount.

Reverse Repurchase Agreements

Reverse repurchase agreements are identical to repurchase agreements except that rather than buying securities for cash subject to their repurchase by the seller, a Portfolio sells portfolio assets concurrently with an agreement by the Portfolio to repurchase the same assets at a later date at a fixed price slightly higher than the sale price. During the reverse repurchase agreement period, the Portfolio continues to receive principal and interest payments on these securities. Generally, the effect of a reverse repurchase agreement is that the Portfolio can recover all or most of the cash invested in the portfolio securities involved during the term of the reverse repurchase agreement, while it will be able to keep the interest income associated with those portfolio securities. Such transactions are advantageous only if the “interest cost” to the Portfolio of the reverse repurchase transaction, *i.e.*, the difference between the sale and repurchase price for the securities, is less than the cost of otherwise obtaining the cash.

Reverse repurchase agreements involve the risk that the market value of the securities the Portfolio is obligated to repurchase under the agreement may decline below the repurchase price. In the event the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, the Portfolio’s use of the proceeds of the agreement may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce the Portfolio’s obligation to repurchase the securities. In addition, the use of these investments results in leveraging the Portfolio’s common stocks because the Portfolio uses the proceeds to make investments in other securities. See “Borrowing and Use of Leverage” below.

Rights and Warrants

A Portfolio may invest in rights and warrants, which entitle the holder to buy equity securities at a specific price for a specific period of time but will do so only if the equity securities themselves are deemed appropriate by the Adviser for inclusion in the Portfolio’s portfolio. Rights and warrants may be considered more speculative than certain other types of investments in that they do not entitle a holder to dividends or voting rights with respect to the underlying securities which may be purchased nor do they represent any rights in the assets of the issuing company. Also, the value of a right or warrant does not necessarily change with the value of the underlying securities and a right or warrant ceases to have value if it is not exercised prior to the expiration date.

Securities Acquired in Restructurings and Workouts

A Portfolio’s investments may include fixed-income securities (particularly lower-rated fixed-income securities) or loan participations that default or are in risk of default (“Distressed Securities”). A Portfolio’s investments may also include senior obligations of a borrower issued in connection with a restructuring pursuant to Chapter 11 of the U.S. Bankruptcy Code (commonly known as “debtor-in-possession” or “DIP” financings). Distressed

Securities may be the subject of restructurings outside of bankruptcy court in a negotiated workout or in the context of bankruptcy proceedings. In connection with these investments or an exchange or workout of such securities, a Portfolio may determine or be required to accept various instruments. These instruments may include, but are not limited to, equity securities, warrants, rights, participation interests in sales of assets and contingent-interest obligations. Depending upon, among other things, the Adviser's evaluation of the potential value of such securities in relation to the price that could be obtained at any given time if they were sold, a Portfolio may determine to hold the securities in its portfolio.

Securities Ratings

The ratings of fixed-income securities by Moody's Investors Service, Inc. ("Moody's"), S&P Global Ratings ("S&P") Fitch Ratings ("Fitch") and A.M. Best Company are a generally accepted barometer of credit risk. They are, however, subject to certain limitations from an investor's standpoint. The rating of an issuer is heavily weighted by past developments and does not necessarily reflect probable future conditions. There is frequently a lag between the time a rating is assigned and the time it is updated. In addition, there may be varying degrees of difference in credit risk of securities within each rating category.

Securities rated Baa, BBB+, BBB, or BBB- by S&P or Baa1, Baa2 or Baa3 by Moody's are considered by Moody's to have speculative characteristics. Sustained periods of deteriorating economic conditions or rising interest rates are more likely to lead to a weakening in the issuer's capacity to pay interest and repay principal than in the case of higher-rated securities.

Non-rated securities will also be considered for investment by a Portfolio when the Adviser believes that the financial condition of the issuers of such securities, or the protection afforded by the terms of the securities themselves, limits the risk to a Portfolio to a degree comparable to that of rated securities which are consistent with a Portfolio's objectives and policies.

The Adviser generally uses ratings issued by S&P, Moody's and Fitch. Some securities are rated by more than one of these ratings agencies, and the ratings assigned to the security by the rating agencies may differ. In such an event and for purposes of determining compliance with restrictions on investments for the Portfolios, if a security is rated by two or more rating agencies, the Adviser will deem the security to be rated at the highest rating. For example, if a security is rated by Moody's and S&P only, with Moody's rating the security as Ba and S&P as BBB, the Adviser will deem the security to be rated as the equivalent of BBB (*i.e.*, Baa by Moody's and BBB by S&P). Or, if a security is rated by Moody's, S&P and Fitch, with Moody's rating the security as Ba, S&P as BBB and Fitch as BB, the Adviser will deem the security to be rated as the equivalent of BBB (*i.e.*, Ba1 by Moody's, BBB by S&P and BBB by Fitch).

The Adviser will try to reduce the risk inherent in a Portfolio's investment in fixed-income securities through credit analysis, diversification and attention to current developments and trends in interest rates and economic conditions. However, there can be no assurance that losses will not occur. In considering high-yielding investments for a Portfolio, the

Adviser will attempt to identify those fixed-income securities whose financial condition is adequate to meet future obligations, has improved or is expected to improve in the future. The Adviser's analysis focuses on relative values based on such factors as interest or dividend coverage, asset coverage earnings prospects and the experience and managerial strength of the issuer.

Unless otherwise indicated, references to securities ratings by one rating agency in this SAI shall include the equivalent rating by another rating agency.

Short Sales

A Portfolio may make short sales of securities or maintain a short position. A short sale is effected by selling a security that a Portfolio does not own, or if the Portfolio does own such security, it is not to be delivered upon consummation of sale. A short sale is against the box to the extent that a Portfolio contemporaneously owns or has the right to obtain securities identical to those sold. A short sale of a security involves the risk that, instead of declining, the price of the security sold short will rise. If the price of the securities sold short increases between the time of a short sale and the time a Portfolio replaces the borrowed security, the Portfolio will incur a loss; conversely, if the price declines, the Portfolio will realize a gain. The potential for the price of a fixed-income security sold short to rise is a function of both the remaining maturity of the obligation, its creditworthiness and its yield. Unlike short sales of equities or other instruments, the potential for the price of a fixed-income security to rise may be limited due to the fact that the security will be no more than par at maturity. However, the short sale of other instruments or securities generally, including fixed-income securities convertible into equities or other instruments, a fixed-income security trading at a deep discount from par or which pays a coupon that is high in relative or absolute terms, or which is denominated in a currency other than the U.S. Dollar, involves the possibility of a theoretically unlimited loss since there is a theoretically unlimited potential for the market price of the security sold short to increase.

Special Situations

A special situation arises when, in the opinion of the Adviser, the securities of a particular company will, within a reasonably estimable period of time, be accorded market recognition at an appreciated value solely by reason of a development particularly or uniquely applicable to that company, and regardless of general business conditions or movements of the market as a whole. Developments creating special situations might include, among others, liquidations, reorganizations, recapitalizations or mergers, material litigation, technological breakthroughs and new management or management policies. Although large and well-known companies may be involved, special situations often involve much greater risk than is inherent in ordinary investment securities.

Standby Commitment Agreements

A Portfolio may, from time to time, enter into standby commitment agreements. Such agreements commit a Portfolio, for a stated period of time, to purchase a stated amount of a security that may be issued and sold to the Portfolio at the option of the issuer. The price and

coupon of the security are fixed at the time of the commitment. At the time of entering into the agreement a Portfolio is paid a commitment fee, regardless of whether or not the security is ultimately issued. A Portfolio will enter into such agreements only for the purpose of investing in the security underlying the commitment at a yield and price which are considered advantageous to the Portfolio and which are unavailable on a firm commitment basis.

There can be no assurance that the securities subject to a standby commitment will be issued, and the value of the security, if issued, on the delivery date may be more or less than its purchase price. Since the issuance of the security underlying the commitment is at the option of the issuer, a Portfolio will bear the risk of capital loss in the event the value of the security declines and may not benefit from an appreciation in the value of the security during the commitment period if the issuer decides not to issue and sell the security to the Portfolio.

The purchase of a security subject to a standby commitment agreement and the related commitment fee will be recorded on the date on which the security can reasonably be expected to be issued, and the value of the security will thereafter be reflected in the calculation of a Portfolio's NAV. The cost basis of the security will be adjusted by the amount of the commitment fee. In the event the security is not issued, the commitment fee will be recorded as income on the expiration date of the standby commitment.

Structured Products

A Portfolio may invest in structured products. Structured products, including indexed or structured securities, combine the elements of futures contracts or options with those of debt, preferred equity or a depositary instrument. Generally, the principal amount, amount payable upon maturity or redemption, or interest rate of a structured product is tied (either positively or negatively) to prices, changes in prices, or differences between prices, of underlying assets, such as securities, currencies, intangibles, goods, articles or commodities or by reference to an unrelated benchmark related to an objective index, economic factor or other measure, such as interest rates, currency exchange rates, commodity indices, and securities indices. The interest rate or (unlike most fixed-income securities) the principal amount payable at maturity of a structured product may be increased or decreased depending on changes in the value of the underlying asset or benchmark.

Structured products may take a variety of forms. Most commonly, they are in the form of debt instruments with interest or principal payments or redemption terms determined by reference to the value of a currency or commodity or securities index at a future point in time, but may also be issued as preferred stock with dividend rates determined by reference to the value of a currency or convertible securities with the conversion terms related to a particular commodity.

Investing in structured products may be more efficient and less expensive for a Portfolio than investing in the underlying assets or benchmarks and the related derivative. These investments can be used as a means of pursuing a variety of investment goals, including currency hedging, duration management and increased total return. In addition, structured products may be a tax-advantaged investment in that they generate income that may be distributed to

shareholders as income rather than short-term capital gains that may otherwise result from a derivatives transaction.

Structured products, however, have more risk than traditional types of debt or other securities. These products may not bear interest or pay dividends. The value of a structured product or its interest rate may be a multiple of a benchmark and, as a result, may be leveraged and move (up or down) more steeply and rapidly than the benchmark. Under certain conditions, the redemption value of a structured product could be zero. Structured products are potentially more volatile and carry greater market risks than traditional debt instruments. The prices of the structured instrument and the benchmark or underlying asset may not move in the same direction or at the same time. Structured products may carry greater trading risk and be more difficult to price than less complex securities or instruments or more traditional debt securities. The risk of these investments can be substantial with the possibility that the entire principal amount is at risk. The purchase of structured products also exposes a Portfolio to the credit risk of the issuer of the structured product.

Structured Notes and Indexed Securities: A Portfolio may invest in a particular type of structured instrument sometimes referred to as a “structured note”. The terms of these notes may be structured by the issuer and the purchaser of the note. Structured notes are derivative debt instruments, the interest rate or principal of which is determined by an unrelated indicator (for example, a currency, security, commodity or index thereof). Indexed securities may include structured notes as well as securities other than debt securities, the interest rate or principal of which is determined by an unrelated indicator. The terms of structured notes and indexed securities may provide that in certain circumstances no principal is due at maturity, which may result in a total loss of invested capital. Structured notes and indexed securities may be positively or negatively indexed, so that appreciation of the unrelated indicator may produce an increase or a decrease in the interest rate or the value of the structured note or indexed security at maturity may be calculated as a specified multiple of the change in the value of the unrelated indicator. Therefore, the value of such notes and securities may be very volatile. Structured notes and indexed securities may entail a greater degree of market risk than other types of debt securities because the investor bears the risk of the unrelated indicator. Structured notes or indexed securities also may be more volatile, carry greater trading risk, and be more difficult to accurately price than less complex securities and instruments or more traditional debt securities.

Commodity Index-Linked Notes and Commodity-Linked Notes: Structured products may provide exposure to the commodities markets. These structured notes may include leveraged or unleveraged commodity index-linked notes, which are derivative debt instruments with principal and/or coupon payments linked to the performance of commodity indices. They also include commodity-linked notes with principal and/or coupon payments linked to the value of particular commodities or commodities futures contracts, or a subset of commodities and commodities future contracts. The value of these notes will rise or fall in response to changes in the underlying commodity, commodity futures contract, subset of commodities or commodities futures contracts or commodity index. These notes expose a Portfolio economically to movements in commodity prices. These notes also are subject to risks, such as credit, market and interest rate risks, that in general affect the values of debt securities. In addition, these notes are often leveraged, increasing the volatility of each note’s market value relative to changes in the

underlying commodity, commodity futures contract or commodity index. Therefore, a Portfolio might receive interest or principal payments on the note that are determined based upon a specified multiple of the change in value of the underlying commodity, commodity futures contract or index.

Credit-Linked Securities: Credit-linked securities are issued by a limited purpose trust or other vehicle that, in turn, invests in a basket of derivative instruments, such as credit default swaps, interest rate swaps and other securities, in order to provide exposure to certain high-yield or other fixed-income markets. For example, a Portfolio may invest in credit-linked securities as a cash management tool in order to gain exposure to certain high-yield markets and/or to remain fully invested when more traditional income-producing securities are not available. Like an investment in a bond, investments in credit-linked securities represent the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on the trust's receipt of payments from, and the trust's potential obligations to, the counterparties to the derivative instruments and other securities in which the trust invests. For instance, the trust may sell one or more credit default swaps, under which the trust would receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the trust would be obligated to pay the counterparty the par value (or other agreed-upon value) of the referenced debt obligation. This, in turn, would reduce the amount of income and principal that a Portfolio would receive as an investor in the trust. A Portfolio's investments in these instruments are indirectly subject to the risks associated with derivative instruments, including, among others, credit risk, default or similar event risk, counterparty risk, interest rate risk, leverage risk and management risk. These securities are generally Rule 144A Securities and therefore may be freely traded among institutional buyers. However, changes in the market for credit-linked securities or the availability of willing buyers may result in reduced liquidity for the securities.

Trust Preferred Securities

Trust preferred securities are preferred securities typically issued by a special purpose trust subsidiary and backed by subordinated debt of that subsidiary's parent corporation. Unlike typical asset-backed securities, which have many underlying payors and usually are overcollateralized, trust preferred securities have only one underlying payor and are not overcollateralized. Trust preferred securities may have varying maturity dates, at times in excess of 30 years, or may have no specified maturity date with an onerous interest rate adjustment if not called on the first call date. Dividend payments of the trust preferred securities generally coincide with interest payments on the underlying subordinated debt. Issuers of trust preferred securities and their parents currently enjoy favorable tax treatment. If the tax characterization of trust preferred securities were to change, they could be redeemed by the issuers, resulting in a loss to a Portfolio. Trust preferred securities are subject to special risks. Dividend payments only will be paid if interest payments on the underlying obligations are made. These interest payments are dependent on the financial condition of the parent corporation and may be deferred for up to 20 consecutive quarters. There is also the risk that the underlying obligations, and thus the trust preferred securities, may be prepaid after a stated call date or as a result of certain tax or regulatory events, resulting in a lower yield to maturity.

U.S. Government Securities

U.S. Government securities may be backed by the full faith and credit of the United States, supported only by the right of the issuer to borrow from the U.S. Treasury or backed only by the credit of the issuing agency itself. These securities include: (i) the following U.S. Treasury securities, which are backed by the full faith and credit of the United States and differ only in their interest rates, maturities and times of issuance: U.S. Treasury bills (maturities of one year or less with no interest paid and hence issued at a discount and repaid at full face value upon maturity), U.S. Treasury notes (maturities of one to ten years with interest payable every six months) and U.S. Treasury bonds (generally maturities of greater than ten years with interest payable every six months); (ii) obligations issued or guaranteed by U.S. Government agencies and instrumentalities that are supported by the full faith and credit of the U.S. Government, such as securities issued by GNMA, the Farmers Home Administration, the Department of Housing and Urban Development, the Export-Import Bank, the General Services Administration and the Small Business Administration, including obligations that are issued by private issuers that are guaranteed as to principal or interest by the U.S. Government, its agencies or instrumentalities; and (iii) obligations issued or guaranteed by U.S. Government agencies and instrumentalities that are not supported by the full faith and credit of the U.S. Government or a right to borrow from the U.S. Treasury, such as securities issued by the FNMA and FHLMC, and governmental CMOs. The maturities of the U.S. Government securities listed in paragraphs (i) and (ii) above usually range from three months to 30 years. Such securities, except GNMA certificates, normally provide for periodic payments of interest in fixed amount with principal payments at maturity or specified call dates.

U.S. Government securities also include zero-coupon securities and principal-only securities and certain SMRS. Zero-coupon securities are described in more detail in “Zero-Coupon Treasury Securities” below, and SMRS and principal-only securities are described in more detail in “Mortgage-Related Securities and Other Asset-Backed Securities-Stripped Mortgage-Related Securities” above. In addition, other U.S. Government agencies and instrumentalities have issued stripped securities that are similar to SMRS.

Inflation-protected securities, or IPS, such as Treasury Inflation-Protected Securities, or TIPS, are fixed-income securities whose principal value is periodically adjusted according to the rate of inflation. If the index measuring inflation falls, the principal value of these securities will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-protected securities. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

IPS tend to react to changes in real interest rates. In general, the price of these securities can fall when real interest rates rise, and can rise when real interest rates fall. In addition, the value of these securities may be vulnerable to changes in expectations of inflation. Interest payments on these securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation.

TIPS, which are issued by the U.S. Treasury, use the Consumer Price Index for Urban Consumers, or the CPI, as the inflation measure. The principal of TIPS increases with inflation and decreases with deflation, as measured by the CPI. When TIPS mature, the holder is paid the adjusted principal or original principal, whichever is greater. TIPS pay interest twice a year, at a fixed rate, which is determined by auction at the time the TIPS are issued. The rate is applied to the adjusted principal; so, like the principal, interest payments rise with inflation and fall with deflation. TIPS are issued in terms of 5, 10, and 30 years.

Guarantees of securities by the U.S. Government or its agencies or instrumentalities guarantee only the payment of principal and interest on the securities, and do not guarantee the securities' yield or value or the yield or value of the shares of the Portfolio that holds the securities.

U.S. Government securities are considered among the safest of fixed-income investments. As a result, however, their yields are generally lower than the yields available from other fixed-income securities.

Zero-Coupon Treasury Securities. Zero-coupon Treasury securities are U.S. Treasury bills, notes and bonds which have been stripped of their unmatured interest coupons and receipts or certificates representing interests in such stripped debt obligations and coupons. A zero-coupon security is a debt obligation that does not entitle the holder to any periodic payments prior to maturity but, instead, is issued and traded at a discount from its face amount. The discount varies depending on the time remaining until maturity, prevailing interest rates, liquidity of the security and perceived credit quality of the issuer. The market prices of zero-coupon securities are generally more volatile than those of interest-bearing securities, and are likely to respond to changes in interest rates to a greater degree than otherwise comparable securities that do pay periodic interest. Current federal tax law requires that a holder (such as a Portfolio) of a zero-coupon security accrue a portion of the discount at which the security was purchased as income each year, even though the holder receives no interest payment on the security during the year. As a result, in order to make the distributions necessary for a Portfolio not to be subject to federal income or excise taxes, the Portfolio might be required to pay out as an income distribution each year an amount, obtained by liquidation of portfolio securities if necessary, greater than the total amount of cash that the Portfolio has actually received as interest during the year. The Adviser believes, however, that it is highly unlikely that it would be necessary to liquidate any portfolio securities for this purpose.

Currently the only U.S. Treasury security issued without coupons is the Treasury bill. Although the U.S. Treasury does not itself issue treasury notes and bonds without coupons, under the U.S. Treasury STRIPS program interest and principal on certain long term treasury securities may be maintained separately in the Federal Reserve book entry system and may be separately traded and owned. However, in the last few years a number of banks and brokerage firms have separated ("stripped") the principal portions ("corpus") from the coupon portions of the U.S. Treasury bonds and notes and sold them separately in the form of receipts or certificates representing undivided interests in these instruments (which instruments are generally held by a bank in a custodial or trust account).

Variable, Floating and Inverse Floating-Rate Securities

These securities have interest rates that are reset at periodic intervals, usually by reference to some interest rate index or market interest rate. Although the rate adjustment feature may act as a buffer to reduce sharp changes in the value of these securities, they are still subject to changes in value based on changes in market interest rates or changes in the issuer's creditworthiness. Because the interest rate is reset only periodically, changes in the interest rate on these securities may lag behind changes in prevailing market interest rates. Also, some of these securities (or the underlying mortgages) are subject to caps or floors that limit the maximum change in the interest rate during a specified period or over the life of the security.

Variable Notes

Variable amount master demand notes and variable amount floating-rate notes are obligations that permit the investment of fluctuating amounts by a Portfolio at varying rates of interest pursuant to direct arrangements between the Portfolio, as lender, and the borrower. Master demand notes permit daily fluctuations in the interest rate while the interest rate under variable amount floating rate notes fluctuate on a weekly basis. These notes permit daily changes in the amounts borrowed. A Portfolio has the right to increase the amount under these notes at any time up to the full amount provided by the note agreement, or to decrease the amount, and the borrower may repay up to the full amount of the notes without penalty. Because these types of notes are direct lending arrangements between the lender and the borrower, it is not generally contemplated that such instruments will be traded and there is no secondary market for these notes. Master demand notes are redeemable (and, thus, immediately repayable by the borrower) at face value plus accrued interest at any time. Variable amount floating-rate notes are subject to next-day redemption for 14 days after the initial investment therein. With both types of notes, therefore, a Portfolio's right to redeem depends on the ability of the borrower to pay principal and interest on demand. In connection with both types of note arrangements, the Portfolio considers earning power, cash flow and other liquidity ratios of the issuer. These notes, as such, are not typically rated by credit rating agencies. Unless they are so rated, a Portfolio may invest in them only if, at the time of an investment, the issuer has an outstanding issue of unsecured debt rated Aa3 or better by Moody's or AA- or better by S&P or Fitch.

General

The Fund has voluntarily agreed that each Portfolio with the ability to invest in foreign issuers will adhere to the foreign security diversification guidelines promulgated by certain State Insurance Departments. Pursuant to these guidelines, each such Portfolio will invest in issuers from a minimum of five different foreign countries. This minimum will be reduced to four different foreign countries when securities of foreign issuers comprise less than 80% of the Portfolio's NAV, three different foreign countries when securities of foreign issuers comprise less than 60% of the Portfolio's NAV, two different foreign countries when securities of foreign issuers comprise less than 40% of the Portfolio's NAV and one foreign country when securities of foreign issuers comprise less than 20% of the Portfolio's NAV. The Fund has also voluntarily agreed that each Portfolio that may invest in securities of foreign issuers will limit its investment in the securities of issuers located in any one country to 20% of the Portfolio's NAV,

except that the Portfolio may have an additional 15% of its NAV invested in securities of issuers located in Australia, Canada, France, Japan, the United Kingdom (“U.K.”) or Germany.

In addition, the Fund has adopted an investment policy, which is not designated a “fundamental policy” within the meaning of the 1940 Act, of intending to have each Portfolio comply at all times with the diversification requirements prescribed in Section 817(h) of the Code or any successor thereto and the applicable Treasury Regulations thereunder. This policy may be changed upon notice to shareholders of the Fund, but without their approval. For more information, see “Dividends, Distributions and Taxes” below.

Certain Risk and Other Considerations

Borrowing and Use of Leverage. A Portfolio may use borrowings for investment purposes, subject to the restrictions of the 1940 Act. Borrowings by a Portfolio result in leveraging of the Portfolio’s shares of common stock. The proceeds of such borrowings will be invested in accordance with the Portfolio’s investment objective and policies. A Portfolio may also create leverage through the use of derivatives or use leverage for investment purposes by entering into transactions such as reverse repurchase agreements and forward contracts. This means that the Portfolio uses the cash proceeds made available during the term of these transactions to make investments in other securities.

Utilization of leverage, which is usually considered speculative, however, involves certain risks to a Portfolio’s shareholders. These include a higher volatility of the NAV of a Portfolio’s shares of common stock and the relatively greater effect of changes in the value of the Portfolio’s portfolio on the NAV of the shares caused by favorable or adverse changes in market conditions or interest rates. So long as a Portfolio is able to realize a net return on the portion of its investment portfolio resulting from leverage that is higher than the interest expense paid on borrowings or the carrying costs of leveraged transactions, the effect of leverage will be to cause a Portfolio’s shareholders to realize a higher net return than if the Portfolio were not leveraged. However, to the extent that the interest expense on borrowings or the carrying costs of leverage approaches the net return on the leveraged portion of a Portfolio’s investment portfolio, the benefit of leverage to a Portfolio’s shareholders will be reduced, and if the interest expense on borrowings or carrying costs of leverage were to exceed the net return to shareholders, a Portfolio’s use of leverage would result in a lower rate of net return than if the Portfolio were not leveraged. Similarly, the effect of leverage in a declining market could be a greater decrease in NAV per share than if a Portfolio were not leveraged. In an extreme case, if a Portfolio’s current investment income were not sufficient to meet the interest expense on borrowings or the carrying costs of leveraged transactions, it could be necessary for the Portfolio to liquidate certain of its investments in adverse circumstances, potentially significantly reducing its NAV.

Certain transactions, such as derivatives transactions, forward commitments, reverse repurchase agreements and short sales involve leverage and may expose a Portfolio to potential losses that, in some cases, may exceed the amount originally invested by the Portfolio. When a Portfolio engages in such transactions, it will, in accordance with guidance provided by the Commission or its staff in, among other things, regulations, interpretative releases and no-action letters, deposit in a segregated account certain liquid assets with a value at least equal to

the Portfolio's exposure, on a marked-to-market or on another relevant basis, to the transaction. Transactions for which assets have been segregated will not be considered "senior securities" for purposes of the Portfolio's investment restriction concerning senior securities. The segregation of assets is intended to enable the Portfolio to have assets available to satisfy its obligations with respect to these transactions, but will not limit the Portfolio's exposure to loss. As noted above under "Risks of Derivatives and Other Regulatory Issues – Regulatory Risk", the Commission is expected to re-propose a rule regarding derivatives and similar transactions. The proposed rule would replace the Commission's guidance on asset segregation with new standardized requirements that may, if adopted, limit the Portfolio's flexibility to enter into these transactions by increasing asset segregation amounts.

Cyber Security Risk. As the use of the Internet and other technologies has become more prevalent in the course of business, the Portfolios and their service providers, including the Adviser, have become more susceptible to operational and financial risks associated with cyber security. Cyber security incidents can result from deliberate attacks such as gaining unauthorized access to digital systems (*e.g.*, through "hacking" or malicious software coding) for purposes of misappropriating assets or sensitive information, corrupting data, or causing operational disruption, or from unintentional events, such as the inadvertent release of confidential information. Cyber security failures or breaches of the Portfolios or their service providers or the issuers of securities in which the Portfolios invest have the ability to cause disruptions and affect business operations, potentially resulting in financial losses, the inability of Portfolio shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, reputational damage, reimbursement or other compensation costs, and/or additional compliance costs. While measures have been developed that are designed to reduce the risks associated with cyber security, there is no guarantee that those measures will be effective, particularly since the Portfolios do not control the cyber security defenses or plans of their service providers, financial intermediaries and companies in which they invest or with which they do business.

Real Estate Investments. If a Portfolio receives rental income or income from the disposition of real property acquired as a result of a default on securities the Portfolio owns, the receipt of such income may adversely affect the Portfolio's ability to retain its tax status as a regulated investment company.

Risks of Investments in Foreign Securities. Investors should understand and consider carefully the substantial risks involved in securities of foreign companies and governments of foreign nations, some of which are referred to below, and which are in addition to the usual risks inherent in domestic investments. Investing in securities of non-U.S. companies, which are generally denominated in foreign currencies, and utilization of derivative investment products denominated in, or the value of which is dependent upon movements in the relative value of, a foreign currency, involve certain considerations comprising both risk and opportunity not typically associated with investing in U.S. companies. These considerations include changes in exchange rates and exchange control regulations, political and social instability, expropriation, imposition of foreign taxes, less liquid markets and less available information than are generally the case in the United States, higher transaction costs, less government supervision of exchanges, brokers and issuers, difficulty in enforcing contractual obligations, lack of uniform accounting and auditing standards and greater price volatility.

There is generally less publicly available information about foreign companies comparable to reports and ratings that are published about companies in the United States. Foreign issuers are subject to accounting and financial standards and requirements that differ, in some cases significantly, from those applicable to U.S. issuers. In particular, the assets and profits appearing on the financial statements of a foreign issuer may not reflect its financial position or results of operations in the way they would be reflected had the financial statement been prepared in accordance with U.S. generally accepted accounting principles. In addition, for an issuer that keeps accounting records in local currency, inflation accounting rules in some of the countries in which a Portfolio may invest require, for both tax and accounting purposes, that certain assets and liabilities be restated on the issuer's balance sheet in order to express items in terms of currency of constant purchasing power. Inflation accounting may indirectly generate losses or profits. Consequently, financial data may be materially affected by restatements for inflation and may not accurately reflect the real condition of those issuers and securities markets. Substantially less information is publicly available about certain non-U.S. issuers than is available about U.S. issuers.

It is contemplated that foreign securities will be purchased in OTC markets or on stock exchanges located in the countries in which the respective principal offices of the issuers of the various securities are located, if that is the best available market. Foreign securities markets are generally not as developed or efficient as those in the United States. While growing in volume, such markets usually have substantially less volume than the New York Stock Exchange (the "Exchange"), and securities of some foreign companies are more difficult to trade or dispose of and more volatile than securities of comparable U.S. companies. Similarly, volume and liquidity in most foreign bond markets is less than in the United States and, at times, volatility of price can be greater than in the United States. Fixed commissions on foreign stock exchanges are generally higher than negotiated commissions on U.S. exchanges, although a Portfolio will endeavor to achieve the most favorable net results on its portfolio transactions. There is generally less government supervision and regulation of stock exchanges, brokers and listed companies than in the United States.

Expropriation, confiscatory taxation, nationalization, political, economic or social instability or other similar developments, such as military coups, have occurred in the past in countries in which a Portfolio may invest and could adversely affect a Portfolio's assets should these conditions or events recur.

The U.K. formally withdrew from the European Union (the "EU") on January 31, 2020, and is now in a transition period through December 31, 2020, during which the U.K. and the EU will seek to agree on the terms of their future relationship. Although the U.K. will remain in the EU single market and customs union during the transition period, the long-term nature of the U.K.'s relationship with the EU is unclear, and there is considerable uncertainty as to when any agreement will be reached and implemented. The uncertainty surrounding the implementation and effect of the U.K. ceasing to be a member of the EU, the uncertainty in relation to the legal and regulatory framework that may apply to the U.K. and its relationship with the remaining members of the EU (including, in relation to trade), has caused and is likely to cause increased economic volatility and market uncertainty globally. During the transition

period and beyond, the impact on the U.K. and European economies and the broader global economy could be significant, resulting in increased volatility and illiquidity, currency fluctuations, impacts on arrangements for trading and on other existing cross-border cooperation arrangements (whether economic, tax, fiscal, legal, regulatory or otherwise), and in potentially lower growth for companies in the U.K., Europe and globally, which could have an adverse effect on the value of a Portfolio's investments.

Foreign investment in certain foreign securities is restricted or controlled to varying degrees. These restrictions or controls may at times limit or preclude foreign investment in certain foreign securities and increase the costs and expenses of a Portfolio. Certain countries in which a Portfolio may invest require governmental approval prior to investments by foreign persons, limit the amount of investment by foreign persons in a particular issuer, limit the investment by foreign persons only to a specific class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of the countries and/or impose additional taxes on foreign investors.

Certain countries may require governmental approval for the repatriation of investment income, capital or the proceeds of sales of securities by foreign investors. In addition, if a deterioration occurs in a country's balance of payments, the country could impose temporary restrictions on foreign capital remittances.

Income from certain investments held by a Portfolio could be reduced by foreign income taxes, including withholding taxes. It is impossible to determine the effective rate of foreign tax in advance. A Portfolio's NAV may also be affected by changes in the rates or methods of taxation applicable to that Portfolio or to entities in which that Portfolio has invested. The Adviser generally will consider the cost of any taxes in determining whether to acquire any particular investments, but can provide no assurance that the tax treatment of investments held by the Portfolio will not be subject to change. A shareholder otherwise subject to U.S. federal income taxes may, subject to certain limitations, be entitled to claim a credit or deduction for U.S. federal income tax purposes for his or her proportionate share of such foreign taxes paid by the Portfolio. See "Dividends, Distributions and Taxes".

Investors should understand that the expenses of a fund investing in securities of foreign issuers may be higher than those of investment companies investing only in domestic securities since, among other things, the cost of maintaining the custody of securities of foreign issuers is higher and purchases and sales of portfolio securities may be subject to higher transaction charges, such as stamp duties and turnover taxes.

For many foreign securities, there are U.S. Dollar-denominated ADRs that are traded in the United States on exchanges or OTC. ADRs do not lessen the foreign exchange risk inherent in investing in the securities of foreign issuers. However, by investing in ADRs rather than directly in stock of foreign issuers, a Portfolio can avoid currency risks which might occur during the settlement period for either purchases or sales.

Investments in China (applicable to Balanced Wealth Strategy, Dynamic Asset Allocation Portfolio, Intermediate Bond Portfolio and Global Risk Allocation—Moderate Portfolio). Risks of investments in securities of Chinese issuers include market volatility, heavy dependence on exports, which may decrease, sometimes significantly, when the world economy weakens, the continuing importance of the role of the Chinese Government, which may take actions that affect economic and market practices, and political unrest. While the Chinese economy has grown rapidly in recent years, the rate of growth has been declining, and there can be no assurance that China's economy will continue to grow in the future. In addition, trade disputes between China and its trading counterparties, including the United States, have arisen and may continue to arise. Such disputes have resulted in trade tariffs and may potentially result in future trade tariffs, as well as embargoes, trade limitations, trade wars and other negative consequences. These consequences could trigger, among other things, a substantial reduction in international trade and adverse effects on, and potential failure of, individual companies and/or large segments of China's export industry, which could have potentially significant negative effects on the Chinese economy as well as the global economy. Risks of investments in issuers based in Hong Kong, a special administrative region of China, include heavy reliance on the U.S. economy and regional economies, particularly the Chinese economy, which makes these investments vulnerable to changes in these economies, and political unrest. These and related factors may result in adverse effects on investments in China and Hong Kong and have a negative impact on a Portfolio's performance.

The Portfolios may invest in renminbi-denominated bonds issued in China ("RMB Bonds"). RMB Bonds, including government and corporate bonds, are available in the China Interbank Bond Market ("CIBM") to eligible foreign investors through the CIBM Direct Access Program and through the China-Hong Kong Bond Connect program ("Bond Connect"). Both programs are relatively new. Laws, rules, regulations, policies and guidelines relating to each program are untested and subject to change.

The CIBM Direct Access Program, established by the People's Bank of China, allows eligible foreign institutional investors to conduct trading in the CIBM, subject to other rules and regulations as promulgated by Chinese authorities. Eligible foreign institutional investors who wish to invest directly in the CIBM through the CIBM Direct Access Program may do so through an onshore settlement agent, who would be responsible for making the relevant filings and account opening with the relevant authorities. A Portfolio is therefore subject to the risk of default or errors on the part of such agent.

Bond Connect provides a channel for overseas investors to invest in the Chinese bond market through investment links between Hong Kong and mainland China. In China, the Hong Kong Monetary Authority Central Money Markets Unit holds Bond Connect securities on behalf of the ultimate investors (such as a Portfolio) in accounts maintained with a China-based custodian (either the China Central Depository & Clearing Co. or the Shanghai Clearing House). This recordkeeping system subjects a Portfolio to numerous risks, including the risk that a Portfolio may have a limited ability to enforce its rights as a bondholder and the risks of settlement delays and counterparty default of the Hong Kong sub-custodian. Trading through Bond Connect is subject to other restrictions and risks. For example, Bond Connect is generally only available on business days when both the China and Hong Kong markets are open, which

may limit a Portfolio's ability to trade when it would be otherwise attractive to do so. Investing through Bond Connect also subjects the Portfolio to the clearance and settlement procedures associated with Bond Connect, which could pose risks to a Portfolio. Furthermore, securities purchased through Bond Connect generally may not be sold, purchased or otherwise transferred other than through Bond Connect in accordance with applicable rules.

Uncertainties in China's tax rules related to the taxation of income and gains from investments in Chinese interbank bonds could result in unexpected tax liabilities for a Portfolio. Investing in the CIBM will also expose a Portfolio to renminbi currency risks. The ability to hedge renminbi currency risks may be limited. In addition, given the renminbi is subject to exchange control restrictions, a Portfolio could be adversely affected by delays in converting other currencies into renminbi and vice versa and at times when there are unfavorable market conditions.

Foreign Currency Transactions. A Portfolio may invest in securities denominated in foreign currencies and a corresponding portion of the Portfolio's revenues will be received in such currencies. In addition, a Portfolio may conduct foreign currency transactions for hedging and non-hedging purposes on a spot (*i.e.*, cash) basis or through the use of derivatives transactions, such as forward currency exchange contracts, currency futures and options thereon, and options on currencies as described above. The dollar equivalent of a Portfolio's net assets and distributions will be adversely affected by reductions in the value of certain foreign currencies relative to the U.S. Dollar. Such changes will also affect a Portfolio's income. A Portfolio will, however, have the ability to attempt to protect itself against adverse changes in the values of foreign currencies by engaging in certain of the investment practices listed above. While a Portfolio has this ability, there is no certainty as to whether and to what extent the Portfolio will engage in these practices.

Currency exchange rates may fluctuate significantly over short periods of time causing, along with other factors, a Portfolio's NAV to fluctuate. Currency exchange rates generally are determined by the forces of supply and demand in the foreign exchange markets and the relative merits of investments in different countries, actual or anticipated changes in interest rates and other complex factors, as seen from an international perspective. Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad. To the extent a Portfolio's total assets adjusted to reflect the Portfolio's net position after giving effect to currency transactions is denominated or quoted in the currencies of foreign countries, the Portfolio will be more susceptible to the risk of adverse economic and political developments within those countries.

A Portfolio will incur costs in connection with conversions between various currencies. A Portfolio may hold foreign currency received in connection with investments when, in the judgment of the Adviser, it would be beneficial to convert such currency into U.S. Dollars at a later date, based on anticipated changes in the relevant exchange rate.

If the value of the foreign currencies in which a Portfolio receives income falls relative to the U.S. Dollar between receipt of the income and the making of Portfolio

distributions, a Portfolio may be required to liquidate securities in order to make distributions if a Portfolio has insufficient cash in U.S. Dollars to meet the distribution requirements that the Portfolio must satisfy to qualify as a regulated investment company for federal income tax purposes. Similarly, if the value of a particular foreign currency declines between the time a Portfolio incurs expenses in U.S. Dollars and the time cash expenses are paid, the amount of the currency required to be converted into U.S. Dollars in order to pay expenses in U.S. Dollars could be greater than the equivalent amount of such expenses in the currency at the time they were incurred. In light of these risks, a Portfolio may engage in certain currency hedging transactions, which themselves, involve certain special risks.

Risks of Forward Currency Exchange Contracts, Foreign Currency Futures Contracts and Options thereon, Options on Foreign Currencies, Over-the-Counter Options on Securities. Transactions in forward currency exchange contracts, as well as futures and options on foreign currencies, are subject to all of the correlation, liquidity and other risks outlined above. In addition, however, such transactions are subject to the risk of governmental actions affecting trading in or the prices of currencies underlying such contracts, which could restrict or eliminate trading and could have a substantial adverse effect on the value of positions held by a Portfolio. In addition, the value of such positions could be adversely affected by a number of other complex political and economic factors applicable to the countries issuing the underlying currencies.

Further, unlike trading in most other types of instruments, there is no systematic reporting of last sale information with respect to the foreign currencies underlying contracts thereon. As a result, the available information on which trading decisions will be based may not be as complete as the comparable data on which a Portfolio makes investment and trading decisions in connection with other transactions. Moreover, because the foreign currency market is a global, twenty-four hour market, events could occur in that market but will not be reflected in the forward, futures or options markets until the following day, thereby preventing the Portfolio from responding to such events in a timely manner.

Settlements of exercises of OTC forward currency exchange contracts or foreign currency options generally must occur within the country issuing the underlying currency, which in turn requires traders to accept or make delivery of such currencies in conformity with any U.S. or foreign restrictions and regulations regarding the maintenance of foreign banking relationships and fees, taxes or other charges.

Unlike transactions entered into by a Portfolio in futures contracts and exchange-traded options, options on foreign currencies, forward currency exchange contracts and OTC options on securities and securities indices may not be traded on contract markets regulated by the CFTC or (with the exception of certain foreign currency options) the Commission. Such instruments are instead traded through financial institutions acting as market-makers, although foreign currency options are also traded on certain national securities exchanges, such as the Nasdaq PHLX and the Chicago Board Options Exchange, that are subject to Commission regulation. In an OTC trading environment, many of the protections afforded to exchange participants will not be available. For example, there are no daily price fluctuation limits, and adverse market movements could therefore continue to an unlimited extent over a period of time. Although the purchaser of an option cannot lose more than the amount of the premium plus

related transaction costs, this entire amount could be lost. Moreover, the option writer could lose amounts substantially in excess of the initial investment due to the margin and collateral requirements associated with such positions.

In addition, OTC transactions can be entered into only with a financial institution willing to take the opposite side, as principal, of a Portfolio's position unless the institution acts as broker and is able to find another counterparty willing to enter into the transaction with the Portfolio. Where no such counterparty is available, it will not be possible to enter into a desired transaction. There also may be no liquid secondary market in the trading of OTC contracts, and the Portfolio could be required to retain options purchased or written, or forward currency exchange contracts, until exercise, expiration or maturity. This in turn could limit the Portfolio's ability to profit from open positions or to reduce losses experienced, and could result in greater losses.

Further, OTC transactions are not subject to the guarantee of an exchange clearinghouse, and a Portfolio will therefore be subject to the risk of default by, or the bankruptcy of, the financial institution serving as its counterparty. The Portfolio will enter into an OTC transaction only with parties whose creditworthiness has been reviewed and found to be satisfactory by the Adviser.

Transactions in OTC options on foreign currencies are subject to a number of conditions regarding the commercial purpose of the purchaser of such option. A Portfolio is not able to determine at this time whether or to what extent additional restrictions on the trading of OTC options on foreign currencies may be imposed at some point in the future, or the effect that any such restrictions may have on the hedging strategies to be implemented by the Portfolio.

Options on foreign currencies traded on national securities exchanges are within the jurisdiction of the Commission, as are other securities traded on such exchanges. As a result, many of the protections provided to traders on organized exchanges will be available with respect to such transactions. In particular, all foreign currency option positions entered into on a national securities exchange are cleared and guaranteed by the Options Clearing Corporation ("OCC"), thereby reducing the risk of counterparty default. Further, a liquid secondary market in options traded on a national securities exchange may be more readily available than in the OTC market, potentially permitting a Portfolio to liquidate open positions at a profit prior to exercise or expiration, or to limit losses in the event of adverse market movements.

The purchase and sale of exchange-traded foreign currency options, however, is subject to the risks of the availability of a liquid secondary market described above, as well as the risks regarding adverse market movements, the margining of options written, the nature of the foreign currency market, possible intervention by governmental authorities and the effects of other political and economic events. In addition, exchange-traded options on foreign currencies involve certain risks not presented by the OTC market. For example, exercise and settlement of such options must be made exclusively through the OCC, which has established banking relationships in applicable foreign countries for this purpose. As a result, if the OCC determines that foreign governmental restrictions or taxes would prevent the orderly settlement of foreign currency option exercises, or would result in undue burdens on the OCC or its clearing member,

the OCC may impose special procedures on exercise and settlement, such as technical changes in the mechanics of delivery of currency, the fixing of dollar settlement prices or prohibitions on exercise.

INVESTMENT RESTRICTIONS

Fundamental Investment Policies. The following investment restrictions may not be changed without approval by the vote of (1) 67% or more of the shares of that Portfolio represented at a meeting at which more than 50% of the outstanding shares are present in person or by proxy or (2) more than 50% of the outstanding shares of that Portfolio, whichever is less.

As a fundamental policy, a Portfolio:

(a) may not concentrate investments in an industry as concentration may be defined under the 1940 Act or the rules and regulations thereunder (as such statute, rules or regulations may be amended from time to time) or by guidance regarding, interpretations of, or exemptive orders under, the 1940 Act or the rules or regulations thereunder published by appropriate regulatory authorities;

(b) may not issue any senior security (as that term is defined in the 1940 Act) or borrow money, except to the extent permitted by the 1940 Act or the rules and regulations thereunder (as such statute, rules or regulations may be amended from time to time) or by guidance regarding, or interpretations of, or exemptive orders under, the 1940 Act or the rules or regulations thereunder published by appropriate regulatory authorities. For purposes of this restriction, margin and collateral arrangements, including, for example, with respect to permitted borrowings, options, futures contracts, options on futures contracts and other derivatives such as swaps are not deemed to involve the issuance of a senior security;

(c) may not make loans except through (i) the purchase of debt obligations in accordance with its investment objective and policies; (ii) the lending of portfolio securities; (iii) the use of repurchase agreements; or (iv) the making of loans to affiliated funds as permitted under the 1940 Act, the rules and regulations thereunder (as such statutes, rules or regulations may be amended from time to time), or by guidance regarding, and interpretations of, or exemptive orders under, the 1940 Act;

(d) may not purchase or sell real estate except that it may dispose of real estate acquired as a result of the ownership of securities or other instruments. This restriction does not prohibit a Portfolio from investing in securities or other instruments backed by real estate or in securities of companies engaged in the real estate business;

(e) may purchase or sell commodities or options thereon to the extent permitted by applicable law; and

(f) may not act as an underwriter of securities, except that a Portfolio may acquire restricted securities under circumstances in which, if such securities were sold, the Portfolio might be deemed to be an underwriter for purposes of the Securities Act.

As a fundamental policy, each Portfolio, other than Global Risk Allocation—Moderate Portfolio, is diversified (as that term is defined in the 1940 Act). This means that at least 75% of the Portfolio's assets consist of:

- Cash or cash items;
- Government securities;
- Securities of other investment companies; and
- Securities of any one issuer that represent not more than 10% of the outstanding voting securities of the issuer of the securities and not more than 5% of the total assets of the Portfolio.

Non-Fundamental Investment Policies

As a matter of non-fundamental policy, Global Risk Allocation—Moderate Portfolio is a "non-diversified" investment company, which means the Portfolio is not limited in the proportion of its assets that may be invested in the securities of a single issuer. This policy may be changed without a shareholder vote. Because Global Risk Allocation—Moderate Portfolio is a non-diversified investment company, it may invest in a smaller number of individual issuers than a diversified investment company, and an investment in the Portfolio may, under certain circumstances, present greater risk to an investor than an investment in a diversified investment company.

As a matter of non-fundamental policy, each Portfolio has adopted a policy that provides that the Portfolio may not purchase securities on margin, except (i) as otherwise provided under rules adopted by the Commission under the 1940 Act or by guidance regarding the 1940 Act, or interpretations thereof, and (ii) that the Portfolio may obtain such short-term credits as are necessary for the clearance of portfolio transactions, and the Portfolio may make margin payments in connection with futures contracts, options, forward contracts, swaps, caps, floors, collars and other financial instruments.

MANAGEMENT OF THE PORTFOLIOS

The Adviser

The Adviser, a Delaware limited partnership with principal offices at 1345 Avenue of the Americas, New York, New York 10105, has been retained under investment advisory agreements (the "Advisory Agreements") to provide investment advice and, in general,

to conduct the management and investment program of each Portfolio under the supervision of the Board. The Adviser is an investment adviser registered under the Investment Advisers Act of 1940, as amended.

The Adviser is a leading global investment management firm supervising client accounts with assets as of December 31, 2019, totaling approximately \$623 billion. The Adviser provides management services for many of the largest U.S. public and private employee benefit plans, endowments, foundations, public employee retirement funds, banks, insurance companies and high net worth individuals worldwide.

As of December 31, 2019, the ownership structure of the Adviser, expressed as a percentage of general and limited partnership interests, was as follows:

Equitable Holdings and its subsidiaries	63.3%
AllianceBernstein Holding L.P.	36.0
Unaffiliated holders	0.7
	<hr/>
	100.0%

Equitable Holdings, Inc. (formerly AXA Equitable Holdings, Inc.) (“EQH”) is a leading financial services company in the U.S. and is comprised of two well-established principal franchises, AXA Equitable Life Insurance Company and AllianceBernstein. As of December 31, 2019, EQH owned approximately 4.1% of the issued and outstanding units representing assignments of beneficial ownership of limited partnership interests in AllianceBernstein Holding LP (“AB Holding”). AllianceBernstein Corporation (an indirect wholly-owned subsidiary of EQH, “GP”) is the general partner of both AB Holding and the Adviser. The GP owns 100,000 general partnership units in AB Holding and a 1% general partnership interest in the Adviser.

Including both the general partnership and limited partnership interests in AB Holding and the Adviser, EQH and its subsidiaries have an approximate 64.8% economic interest in the Adviser as of December 31, 2019.

See “Management of the Portfolios – Investment Adviser” in the Portfolios’ Prospectuses for additional information about the ownership structure of EQH and the Adviser and related matters.

Advisory Agreements and Expenses

The Adviser serves as investment manager and adviser of each of the Portfolios, continuously furnishes an investment program for each Portfolio, and manages, supervises and conducts the affairs of each Portfolio, subject to the oversight of the Board.

Under the Advisory Agreements, the Adviser furnishes advice and recommendations with respect to the Portfolios’ portfolios of securities and investments, and

provides persons satisfactory to the Board to act as officers of the Fund. Such officers or employees may be employees of the Adviser or of its affiliates.

The Adviser is, under each Portfolio's Advisory Agreement, responsible for certain expenses incurred by the Portfolios, including, for example, office facilities, and any expenses incurred in promoting the sale of shares of the Portfolios (other than the portion of the promotional expenses borne by the Portfolios in accordance with an effective plan pursuant to Rule 12b-1 under the 1940 Act, and the costs of printing prospectuses of the Fund and other reports to shareholders and fees related to registration with the Commission and with state regulatory authorities).

The Fund has under the Advisory Agreements assumed the obligation for payment of all other expenses. As to the obtaining of services other than those specifically provided to the Fund by the Adviser, the Fund may employ its own personnel. The Advisory Agreements provide for reimbursement to the Adviser of the costs of certain non-advisory services provided to the Fund. Costs currently reimbursed include the costs of the Adviser's personnel performing certain administrative services for the Fund, including clerical, accounting, legal and other services ("administrative services"), and associated overhead costs, such as office space, supplies and information technology. The administrative services are provided to the Fund on a fully-costed basis (*i.e.*, includes each person's total compensation and a factor reflecting the Adviser's total cost relating to that person, including all related overhead expenses). The reimbursement of these costs to the Adviser will be specifically approved by the Board. The following table shows, for the Portfolios listed, the amounts the Adviser received for such services during the fiscal year ended December 31, 2019.

<u>PORTFOLIO</u>	<u>AMOUNT RECEIVED</u>
Intermediate Bond Portfolio	\$80,075
Large Cap Growth Portfolio	\$80,245
Growth and Income Portfolio	\$95,657
International Growth Portfolio	\$77,520
Global Thematic Growth Portfolio	\$77,506
Small Cap Growth Portfolio	\$77,521
International Value Portfolio	\$79,692
Small/Mid Cap Value Portfolio	\$79,692
Balanced Wealth Strategy Portfolio	\$79,715
Dynamic Asset Allocation Portfolio	\$79,950
Global Risk Allocation—Moderate Portfolio	\$80,258

The Advisory Agreement continues in effect with respect to each Portfolio, provided that such continuance is specifically approved at least annually by a vote of a majority of each Portfolio's outstanding voting securities or by the Board, including in either case approval by a majority of the Directors who are not parties to the Advisory Agreement or "interested persons" of such parties, as defined by the 1940 Act. Most recently, continuance of the Advisory Agreement was approved for an additional annual term by the Board, including a majority of the Directors who are not parties to the Advisory Agreement or interested persons of any such party, at meetings held on May 7-9, 2019, July 30-31, 2019 and November 4-6, 2019.

Any material amendment to the Advisory Agreements must be approved by the vote of a majority of the outstanding securities of the relevant Portfolio and by the vote of a majority of the Directors who are not interested persons of the Fund or the Adviser. The Advisory Agreements are terminable without penalty on 60 days' written notice by a vote of a majority of the outstanding voting securities of each Portfolio, by a vote of a majority of the Directors, or by the Adviser on 60 days' written notice, and will automatically terminate in the event of their assignment. The Advisory Agreements provide that in the absence of willful misfeasance, bad faith or gross negligence on the part of the Adviser, or of reckless disregard of its obligations thereunder, the Adviser shall not be liable for any action or failure to act in accordance with its duties thereunder.

Certain other clients of the Adviser have investment objectives and policies similar to those of the Portfolios. The Adviser may, from time to time, make recommendations that result in the purchase or sale of the particular security by its other clients simultaneously with the purchase or sale thereof by one or more Portfolios. If transactions on behalf of more than one client during the same period increase the demand for securities being purchased or the supply of securities being sold, there may be an adverse effect on price. It is the policy of the Adviser to allocate advisory recommendations and the placing of orders in a manner that is deemed equitable by the Adviser to the accounts involved, including the Portfolios. When two or more of the clients of the Adviser (including the Portfolios) are purchasing or selling the same security on a given day from the same broker or dealer, such transactions may be averaged as to price.

For services rendered by the Adviser under the Advisory Agreement, the Portfolios listed below pay the Adviser the annual percentage rates of the aggregate daily NAV as listed below.

<u>PORTFOLIO</u>	<u>CONTRACTUAL FEE, AS A PERCENTAGE OF THE PORTFOLIO'S AGGREGATE NET ASSETS</u>
Intermediate Bond Portfolio*	.45 of 1% of the first \$2.5 billion, .40 of 1% of the excess over \$2.5 billion up to \$5 billion, .35 of 1% of the excess over \$5 billion up to \$8 billion and .30% of 1% in excess of \$8 billion
Large Cap Growth Portfolio**	.60 of 1% of the first \$2.5 billion, .50 of 1% of the excess over \$2.5 billion up to \$5 billion and .45 of 1% of the excess over \$5 billion
Growth and Income Portfolio	.55 of 1% of the first \$2.5 billion, .45 of 1% of the excess over \$2.5 billion up to \$5 billion and .40 of 1% of the excess over \$5 billion
International Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Global Thematic Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion

<u>PORTFOLIO</u>	<u>CONTRACTUAL FEE, AS A PERCENTAGE OF THE PORTFOLIO'S AGGREGATE NET ASSETS</u>
------------------	---

Small Cap Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
----------------------------	---

* Effective January 30, 2018. Prior to January 30, 2018, the Adviser was compensated at an annual rate of .45 of 1% of the first \$2.5 billion, .40 of 1% of the excess over \$2.5 billion up to \$5 billion and .35 of 1% of the excess over \$5 billion.

** Effective February 3, 2017. Prior to February 3, 2017, the Adviser was compensated at an annual rate of .75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion.

For services rendered by the Adviser under the Advisory Agreement, the Portfolios listed below pay the Adviser the annual percentage rates of the average daily NAV as listed below.

<u>PORTFOLIO</u>	<u>CONTRACTUAL FEE, AS A PERCENTAGE OF THE PORTFOLIO'S AVERAGE NET ASSETS</u>
International Value Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Small/Mid Cap Value Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Balanced Wealth Strategy Portfolio	.55 of 1% of the first \$2.5 billion, .45 of 1% of the excess over \$2.5 billion up to \$5 billion and .40 of 1% of the excess over \$5 billion
Dynamic Asset Allocation Portfolio	.70 of 1%
Global Risk Allocation – Moderate Portfolio	.60 of 1% of the first \$100 million, .45 of 1% of the excess over \$100 million up to \$1 billion and .40 of 1% of the excess over \$1 billion

These fees are accrued daily and paid monthly. The Adviser has contractually agreed for the period from the effective date of the Portfolios' Prospectuses to the effective date of the subsequent Prospectuses incorporating the Portfolios' annual financial statements (the "Period") to waive its fee and bear certain expenses so that total expenses do not exceed, on an annual basis, the percentages of average daily net assets for the share classes of the Portfolios listed below. This fee waiver and/or expense reimbursement agreement automatically extends each year unless the Adviser provides notice to the Portfolios at least 60 days prior to the end of the Period.

<u>PORTFOLIO</u>	<u>EXPENSE CAPS</u>	
International Value Portfolio	Class A	1.20%
	Class B	1.45%
Small/Mid Cap Value Portfolio	Class A	1.20%
	Class B	1.45%
Balanced Wealth Strategy Portfolio	Class A	.75%
	Class B	1.00%
Dynamic Asset Allocation Portfolio	Class A	.85%
	Class B	1.10%

Effective September 4, 2018, the Adviser has contractually agreed to waive its management fee and/or to bear expenses of the Global Thematic Growth Portfolio and International Growth Portfolio in order to reduce total Portfolio operating expenses by .05% of the Global Thematic Growth Portfolio's and International Growth Portfolio's average daily net assets. These fee waiver and/or expense reimbursement agreements will remain in effect until May 1, 2021 and will be automatically extended for one-year terms unless the Adviser provides notice of termination at least 60 days prior to the end of the period.

In addition, effective May 1, 2018, the Adviser has contractually agreed to waive fees and/or reimburse the expenses payable to the Adviser by the Portfolio in an amount equal to the Balanced Wealth Strategy Portfolio's share of the advisory fees of any mutual funds advised by the Adviser in which the Portfolio invests, as included in "Acquired Fund Fees and Expenses" in the Portfolio's Prospectus and paid by the Portfolio. This fee waiver and/or expense reimbursement will remain in effect until May 1, 2021.

The following table shows, for the Portfolios listed, the amounts the Adviser received for such services for the last three fiscal years.

<u>PORTFOLIO</u>	<u>FISCAL YEAR END DECEMBER 31</u>	<u>AMOUNT RECEIVED</u>
Intermediate Bond Portfolio	2017	\$ 250,190
	2018	\$ 219,816
	2019	\$ 203,678
Large Cap Growth Portfolio	2017	\$2,646,057
	2018	\$2,683,563
	2019	\$3,120,010
Growth and Income Portfolio	2017	\$5,804,123
	2018	\$5,643,320
	2019	\$5,627,613
International Growth Portfolio	2017	\$ 501,404
	2018	\$ 453,347
	2019	\$ 364,618

<u>PORTFOLIO</u>	<u>FISCAL YEAR END DECEMBER 31</u>	<u>AMOUNT RECEIVED</u>
Global Thematic Growth Portfolio	2017	\$ 974,543
	2018	\$1,026,058
	2019	\$ 909,819
Small/Mid Cap Value Portfolio	2017	\$5,108,548
	2018	\$5,074,899
	2019	\$4,642,641
International Value Portfolio	2017	\$3,734,261
	2018	\$3,385,689
	2019	\$2,819,506
Balanced Wealth Strategy Portfolio	2017	\$1,672,136
	2018	\$1,543,586
	2019	\$1,401,098
Dynamic Asset Allocation Portfolio	2017	\$4,086,774
	2018	\$4,094,006
	2019	\$3,896,044

The amounts received in the table above are net of the amounts the Adviser waived under a contractual fee waiver or otherwise. Amounts waived were:

	<u>FISCAL YEAR END DECEMBER 31</u>	<u>AMOUNT WAIVED UNDER CONTRACTUAL FEE WAIVER OR OTHERWISE</u>
Intermediate Bond Portfolio	2017	\$ 0
	2018	\$ 0
	2019	\$ 0
Large Cap Growth Portfolio	2017	\$ 129
	2018	\$ 0
	2019	\$ 0
Growth and Income Portfolio	2017	\$ 23,504
	2018	\$ 0
	2019	\$ 0
International Growth Portfolio	2017	\$ 663
	2018	\$ 8,693
	2019	\$ 26,044
Global Thematic Growth Portfolio	2017	\$ 2,998
	2018	\$ 20,908
	2019	\$ 64,987

	<u>FISCAL YEAR END DECEMBER 31</u>	<u>AMOUNT WAIVED UNDER CONTRACTUAL FEE WAIVER OR OTHERWISE</u>
Small/Mid Cap Value Portfolio	2017	\$ 24,210
	2018	\$ 0
	2019	\$ 0
International Value Portfolio	2017	\$ 18,066
	2018	\$ 0
	2019	\$ 0
Balanced Wealth Strategy Portfolio	2017	\$ 1,130
	2018	\$ 0
	2019	\$ 0
Dynamic Asset Allocation Portfolio	2017	\$ 55,353
	2018	\$ 0
	2019	\$ 0

GLOBAL RISK ALLOCATION—MODERATE PORTFOLIO

Effective as of January 1, 2020, the Portfolio has contractually agreed to pay a monthly fee to the Adviser at an annualized rate of .60% of the first \$100 million, .45% of the excess over \$100 million up to \$1 billion and .40% of the excess over \$1 billion of the Portfolio's average daily net assets. Prior to January 1, 2020, the Portfolio paid a monthly fee to the Adviser at an annualized rate of .60% of the Portfolio's average daily net assets. The Adviser has contractually agreed to waive its fee and bear certain expenses so that total expenses (excluding interest expense, expenses associated with securities sold short, brokerage commissions and other transaction costs, taxes and extraordinary expenses) do not exceed on an annual basis .75% and 1.00% of average daily net assets, respectively, for Class A and Class B shares. This fee waiver and/or expense reimbursement agreement may not be terminated before May 1, 2021. No reimbursement payment will be made that would cause the Portfolio's total annualized operating expenses to exceed the amounts listed above. During the fiscal year ended December 31, 2019, December 31, 2018 and December 31, 2017, the Adviser received \$385,112, \$425,373, and \$282,797, respectively, in management fees from the Portfolio (net of \$177,170, \$156,055 and \$254,701, respectively, which was waived by the Adviser due to the expense limitation agreement).

SMALL CAP GROWTH PORTFOLIO

Effective September 4, 2018, the Adviser has contractually agreed to waive its management fee and/or to bear expenses of the Portfolio through May 1, 2021 to the extent necessary to prevent total Portfolio operating expenses (excluding expenses associated with acquired fund fees and expenses other than the advisory fees of any AB Mutual Funds in which the Portfolio may invest, interest expense, taxes, extraordinary expenses, and brokerage commissions and other transaction costs), on an annualized basis, from exceeding .90% and 1.15% of average daily net assets, respectively, for Class A and Class B shares. The fee waiver

and/or expense reimbursement agreement will be automatically extended for one-year terms unless the Adviser provides notice of termination at least 60 days prior to the end of the period. During the fiscal year ended December 31, 2019, December 31, 2018 and December 31, 2017, the Adviser received \$363,312, \$453,934 and \$309,993, respectively, in management fees from the Portfolio (net of \$198,319, \$59,676 and \$3,843, respectively, which was waived by the Adviser due to the expense limitation agreement).

ALL FUNDS

To the extent that a Portfolio invests in AB Government Money Market Portfolio (except for the investment of any cash collateral from securities lending), the Adviser has contractually agreed to waive its management fee from the Portfolio in an amount equal to the Portfolio's pro rata share of the AB Government Money Market Portfolio's effective management fee. This agreement will remain in effect until May 1, 2021 and will continue thereafter from year to year unless the Adviser provides notice of termination to the Portfolio at least 60 days prior to the end of the period. To the extent that a Portfolio invests securities lending cash collateral in the AB Government Money Market Portfolio, the Adviser has also agreed to waive a portion of the Portfolio's share of the advisory fees of AB Government Money Market Portfolio. In connection with the investment by the Portfolios in the AB Government Money Market Portfolio, the Adviser waived its investment management fee from Intermediate Bond Portfolio, Large Cap Growth Portfolio, Growth and Income Portfolio, International Growth Portfolio, Global Thematic Growth Portfolio, Small Cap Growth Portfolio, Small/Mid Cap Value Portfolio, International Value Portfolio, Balanced Wealth Strategy Portfolio, Dynamic Asset Allocation Portfolio and Global Risk Allocation—Moderate Portfolio, in the amounts of \$500, \$41,069, \$108,395, \$2,019, \$5,896, \$1,885, \$8,270, \$4,402, \$1,007, \$8,131 and \$0, respectively, for the fiscal year ended December 31, 2019.

The Adviser may act as an investment adviser to other persons, firms or corporations, including investment companies, and is the investment adviser to AB Bond Fund, Inc., AB Cap Fund, Inc., AB Core Opportunities Fund, Inc., AB Corporate Shares, AB Discovery Growth Fund, Inc., AB Equity Income Fund, Inc., AB Fixed-Income Shares, Inc., AB Global Bond Fund, Inc., AB Global Real Estate Investment Fund, Inc., AB Global Risk Allocation Fund, Inc., AB High Income Fund, Inc., AB Institutional Funds, Inc., AB Large Cap Growth Fund, Inc., AB Municipal Income Fund, Inc., AB Municipal Income Fund II, AB Relative Value Fund, Inc., AB Sustainable Global Thematic Fund, Inc., AB Sustainable International Thematic Fund, Inc., AB Trust, AB Unconstrained Bond Fund, Inc., Sanford C. Bernstein Fund, Inc., Bernstein Fund, Inc., Sanford C. Bernstein Fund II, Inc. and The AB Portfolios, all registered open-end investment companies; and to AB Multi-Manager Alternative Fund, AllianceBernstein Global High Income Fund, Inc. and AllianceBernstein National Municipal Income Fund, Inc., all registered closed-end investment companies. The registered investment companies for which the Adviser serves as investment adviser are referred to collectively below as the "AB Fund Complex", while all of these investment companies, except the Bernstein Fund, Inc., Sanford C. Bernstein Fund, Inc. and the AB Multi-Manager Alternative Fund, are referred to collectively below as the "AB Funds".

Board of Directors Information

Certain information concerning the Directors is set forth below.

Chairman or Vice Chairman of a number of them. He has served as a director or trustee of the AB Funds since 2007 and served as Chairman of the Governance and Nominating Committees of the AB Funds from 2007 until August 2014.

INTERESTED DIRECTOR

Robert M. Keith, ⁺ 59 (2010)	Senior Vice President of the Adviser ⁺⁺ and the head of AllianceBernstein Investments, Inc. (“ABI”) ⁺⁺ since July 2008; Director of ABI and President of the AB Mutual Funds. Previously, he served as Executive Managing Director of ABI from December 2006 to June 2008. Prior to joining ABI in 2006, Executive Managing Director of Bernstein Global Wealth Management, and prior thereto, Senior Managing Director and Global Head of Client Service and Sales of the Adviser’s institutional investment management business since 2004. Prior thereto, he was Managing Director and Head of North American Client Service and Sales in the Adviser’s institutional investment management business, with which he had been associated since prior to 2004.	91	None
---	---	----	------

* The address for each of the Fund’s Directors is c/o AllianceBernstein L.P., Attention: Legal and Compliance Department – Mutual Fund Legal, 1345 Avenue of the Americas, New York, NY 10105.

** There is no stated term of office for the Fund’s Directors.

Member of the Audit Committee, the Governance and Nominating Committee and the Independent Directors Committee.

- + Mr. Keith is an “interested person”, as defined in Section 2(a)(19) of the 1940 Act, of the Fund because of his affiliation with the Adviser.
- ++ The Adviser and ABI are affiliates of the Fund.

The management of the business and affairs of the Fund are overseen by the direction of the Board. Directors who are not “interested persons” of the Fund as defined in the 1940 Act, are referred to as “Independent Directors”, and Directors who are “interested persons” of the Fund are referred to as “Interested Directors”. Certain information concerning the Fund’s governance structure and each Director is set forth below.

Experience, Skills, Attributes, and Qualifications of the Fund’s Directors. The Governance and Nominating Committee of the Board, which is composed of Independent Directors, reviews the experience, qualifications, attributes and skills of potential candidates for nomination or election by the Board, and conducts a similar review in connection with the proposed nomination of current Directors for re-election by shareholders at any annual or special meeting of shareholders. In evaluating a candidate for nomination or election as a Director the Governance and Nominating Committee considers the contribution that the candidate would be expected to make to the diverse mix of experience, qualifications, attributes and skills that the Board believes contributes to good governance for the Fund. In assessing diversity of experience, the Governance and Nominating Committee takes account of a candidate’s educational and professional background, but also the diversity of experience a candidate derives from race, gender, ethnicity, religion, nationality, disability, sexual orientation, or cultural background. Additional information concerning the Governance and Nominating Committee’s consideration of nominees appears in the description of the Committee below.

The Board believes that, collectively, the Directors have balanced and diverse experience, qualifications, attributes, and skills, which allow the Board to operate effectively in governing the Fund and protecting the interests of shareholders. The Board has concluded that, based on each Director’s experience, qualifications, attributes or skills on an individual basis and in combination with those of the other Directors, each Director is qualified and should continue to serve as such.

In determining that a particular Director was and continues to be qualified to serve as a Director, the Board has considered a variety of criteria, none of which, in isolation, was controlling. In addition, the Board has taken into account the actual service and commitment of each Director during his or her tenure (including the Director’s commitment and participation in Board and committee meetings, as well as his or her current and prior leadership of standing and ad hoc committees) in concluding that each should continue to serve. Additional information about the specific experience, skills, attributes and qualifications of each Director, which in each case led to the Board’s conclusion that the Director should serve (or continue to serve) as a trustee or director of the Fund, is provided in the table above and in the next paragraph.

Among other attributes and qualifications common to all Directors are their ability to review critically, evaluate, question and discuss information provided to them (including information requested by the Directors), to interact effectively with the Adviser, other service providers, counsel and the Fund’s independent registered public accounting firm, and to

exercise effective business judgment in the performance of their duties as Directors. In addition to his or her service as a Director of the Fund and other AB Funds as noted in the table above: Mr. Bermudez has extensive experience in the financial services industry, including risk management, from his service in various senior executive positions, including as Chief Risk Officer, of a large global financial services company, as a director and Audit Chair of a Federal Reserve Bank and a director of a large public company, and as Chairman or director or trustee of numerous non-profit organizations; Mr. Downey has experience in the investment advisory business including as Chairman and Chief Executive Officer of a large fund complex and as director of a number of non-AB funds and as Chairman of a non-AB closed-end fund; Ms. Jacklin has experience as a financial services regulator, as U.S. Executive Director of the International Monetary Fund (which is responsible for ensuring the stability of the international monetary system), as a financial services lawyer in private practice, and has served as Chair of the Governance and Nominating Committees of the AB Funds since August 2014; Mr. Keith has experience as an executive of the Adviser with responsibility for, among other things, the AB Funds; Ms. Loeb has extensive experience in the financial services industry and in business more generally, including as a former executive and partner of a large global financial services company and as chief executive officer of a private e-commerce company, a director and audit committee member of a large publicly traded business development company and a fund of hedge funds, and a director or trustee of numerous non-profit organizations including the United Nations Development Corporation and New York City Center; Ms. McMullen has experience as a management consultant and as a director of various private companies and non-profit organizations, as well as extensive asset management experience at a number of companies, including as an executive in the areas of portfolio management, research, and sales and marketing; Mr. Moody, a certified public accountant, has extensive experience in the asset management industry as a senior executive of a large fund complex and as Vice Chairman and U.S. and Global Investment Management Practice Managing Partner for a major accounting firm, and is a member of the Trustee Advisory Board of BoardIQ, a biweekly publication focused on issues and news affecting directors of mutual funds, is a governor on the Board of the Investment Company Institute, the leading association representing regulated funds, including mutual funds, exchange-traded funds and closed-end funds, is a member of the Governing Council of the Independent Directors Council, a group created by the Investment Company Institute that aims to advance the education, communication and policy positions of investment company independent directors, and has served as a director or trustee and Chairman of the Audit Committees of the AB Funds since 2008; Mr. Turner has experience as a director (including Chairman and Chief Executive Officer of a number of companies) and as a venture capital investor including prior service as general partner of three institutional venture capital partnerships, and has served as Chairman of the AB Funds since January 2014 and Chairman of the Independent Directors Committees of such AB Funds since February 2014; and Mr. Weiner has experience as a securities lawyer whose practice included registered investment companies and as a director or trustee of various non-profit organizations and as Chairman or Vice Chairman of a number of them, and served as Chairman of the Governance and Nominating Committees of the AB Funds from 2007 until August 2014. The disclosure herein of a director's experience, qualifications, attributes and skills does not impose on such director any duties, obligations, or liability that are greater than the duties, obligations and liability imposed on such director as a member of the Board and any committee thereof in the absence of such experience, qualifications, attributes and skills.

Board Structure and Oversight Function. The Board is responsible for oversight of the Fund. The Fund has engaged the Adviser to manage the Fund's Portfolios on a day-to-day basis. The Board is responsible for overseeing the Adviser and the Fund's other service providers in the operations of the Fund in accordance with each Portfolio's investment objective and policies and otherwise in accordance with its prospectus, the requirements of the 1940 Act and other applicable Federal, state and other securities and other laws, and the Fund's charter and bylaws. The Board typically meets in-person at regularly scheduled meetings four times throughout the year. In addition, the Directors may meet in-person or by telephone at special meetings or on an informal basis at other times. The Independent Directors also regularly meet without the presence of any representatives of management. As described below, the Board has established three standing committees – the Audit, Governance and Nominating and Independent Directors Committees – and may establish ad hoc committees or working groups from time to time, to assist the Board in fulfilling its oversight responsibilities. Each committee is composed exclusively of Independent Directors. The responsibilities of each committee, including its oversight responsibilities, are described further below. The Independent Directors have also engaged independent legal counsel, and may, from time to time, engage consultants and other advisors, to assist them in performing their oversight responsibilities.

An Independent Director serves as Chairman of the Board. The Chairman's duties include setting the agenda for each Board meeting in consultation with management, presiding at each Board meeting, meeting with management between Board meetings, and facilitating communication and coordination between the Independent Directors and management. The Directors have determined that the Board's leadership by an Independent Director and its committees composed exclusively of Independent Directors is appropriate because they believe it sets the proper tone to the relationships between the Fund, on the one hand, and the Adviser and other service providers, on the other, and facilitates the exercise of the Board's independent judgment in evaluating and managing the relationships. In addition, the Fund is required to have an Independent Director as Chairman pursuant to certain 2003 regulatory settlements involving the Adviser.

Risk Oversight. The Fund and its Portfolios are subject to a number of risks, including investment, compliance and operational risks, including cyber risks. Day-to-day risk management with respect to the Fund and its Portfolios resides with the Adviser or other service providers (depending on the nature of the risk), subject to supervision by the Adviser. The Board has charged the Adviser and its affiliates with (i) identifying events or circumstances the occurrence of which could have demonstrable and material adverse effects on the Fund or its Portfolios; (ii) to the extent appropriate, reasonable or practicable, implementing processes and controls reasonably designed to lessen the possibility that such events or circumstances occur or to mitigate the effects of such events or circumstances if they do occur; and (iii) creating and maintaining a system designed to evaluate continuously, and to revise as appropriate, the processes and controls described in (i) and (ii) above.

Risk oversight forms part of the Board's general oversight of the Portfolios' investment programs and operations and is addressed as part of various regular Board and committee activities. The Fund's investment management and business affairs are carried out by or through the Adviser and other service providers. Each of these persons has an independent interest in risk management but the policies and the methods by which one or more risk

management functions are carried out may differ from the Fund's and each other's in the setting of priorities, the resources available or the effectiveness of relevant controls. Oversight of risk management is provided by the Board and the Audit Committee. The Directors regularly receive reports from, among others, management (including the Chief Risk Officer of the Adviser), the Fund's Chief Compliance Officer, the Fund's independent registered public accounting firm, the Adviser's internal legal counsel, the Adviser's Chief Compliance Officer and internal auditors for the Adviser, as appropriate, regarding risks faced by the Fund and its Portfolios and the Adviser's risk management programs. In addition, the Directors receive regular updates on cyber security matters from the Adviser.

Not all risks that may affect the Fund and its Portfolios can be identified, nor can controls be developed to eliminate or mitigate their occurrence or effects. It may not be practical or cost-effective to eliminate or mitigate certain risks, the processes and controls employed to address certain risks may be limited in their effectiveness, and some risks are simply beyond the reasonable control of the Fund or the Adviser, its affiliates or other service providers. Moreover, it is necessary to bear certain risks (such as investment-related risks) to achieve the Portfolios' goals. As a result of the foregoing and other factors the Fund's and its Portfolios' ability to manage risk is subject to substantial limitations.

Board Committees. The Board has three standing committees – an Audit Committee, a Governance and Nominating Committee and an Independent Directors Committee. The members of the Audit, Governance and Nominating and Independent Directors Committees are identified above.

The function of the Audit Committee is to assist the Board in its oversight of the Portfolios' accounting and financial reporting policies and practices. The Audit Committee met three times during each Portfolio's most recently completed fiscal year.

The function of the Governance and Nominating Committee includes the nomination of persons to fill any vacancies or newly created positions on the Board. The Governance and Nominating Committee met four times during each Portfolios' most recently completed fiscal year.

The Board has adopted a charter for its Governance and Nominating Committee. Pursuant to the charter, the Committee assists the Board in carrying out its responsibilities with respect to governance of the Fund and identifies, evaluates, selects and nominates candidates for the Board. The Committee may also set standards or qualifications for Directors and reviews at least annually the performance of each Director, taking into account factors such as attendance at meetings, adherence to Board policies, preparation for and participation at meetings, commitment and contribution to the overall work of the Board and its committees, and whether there are health or other reasons that might affect the Director's ability to perform his or her duties. The Committee may consider candidates for nomination as Directors submitted by the Fund's current Board members, officers, the Adviser, shareholders and other appropriate sources.

Pursuant to the charter, the Governance and Nominating Committee will consider candidates for nomination as a Director submitted by a shareholder or group of shareholders who

have beneficially owned at least 5% of a Portfolio's common stock or shares of beneficial interest for at least two years prior to the time of submission and who timely provide specified information about the candidates and the nominating shareholder or group. To be timely for consideration by the Governance and Nominating Committee, the submission, including all required information, must be submitted in writing to the attention of the Secretary at the principal executive offices of the Fund not less than 120 days before the date of the proxy statement for the previous year's annual meeting of shareholders. If the Fund did not hold an annual meeting of shareholders in the previous year, the submission must be delivered or mailed and received within a reasonable amount of time before the Fund begins to print and mail its proxy materials. Public notice of such upcoming annual meeting of shareholders may be given in a shareholder report or other mailing to shareholders or by other means deemed by the Governance and Nominating Committee or the Board to be reasonably calculated to inform shareholders.

Shareholders submitting a candidate for consideration by the Governance and Nominating Committee must provide the following information to the Governance and Nominating Committee: (i) a statement in writing setting forth (A) the name, date of birth, business address and residence address of the candidate; (B) any position or business relationship of the candidate, currently or within the preceding five years, with the shareholder or an associated person of the shareholder as defined below; (C) the class or series and number of all shares of a Portfolio owned of record or beneficially by the candidate; (D) any other information regarding the candidate that is required to be disclosed about a nominee in a proxy statement or other filing required to be made in connection with the solicitation of proxies for election of Directors pursuant to Section 20 of the 1940 Act and the rules and regulations promulgated thereunder; (E) whether the shareholder believes that the candidate is or will be an "interested person" of the Fund (as defined in the 1940 Act) and, if believed not to be an "interested person", information regarding the candidate that will be sufficient for the Fund to make such determination; and (F) information as to the candidate's knowledge of the investment company industry, experience as a director or senior officer of public companies, directorships on the boards of other registered investment companies and educational background; (ii) the written and signed consent of the candidate to be named as a nominee and to serve as a Director if elected; (iii) the written and signed agreement of the candidate to complete a directors' and officers' questionnaire if elected; (iv) the shareholder's consent to be named as such by the Fund; (v) the class or series and number of all shares of each Portfolio of the Fund owned beneficially and of record by the shareholder and any associated person of the shareholder and the dates on which such shares were acquired, specifying the number of shares owned beneficially but not of record by each, and stating the names of each as they appear on the Fund's record books and the names of any nominee holders for each; and (vi) a description of all arrangements or understandings between the shareholder, the candidate and/or any other person or persons (including their names) pursuant to which the recommendation is being made by the shareholder. "Associated person of the shareholder" means any person who is required to be identified under clause (vi) of this paragraph and any other person controlling, controlled by or under common control with, directly or indirectly, (a) the shareholder or (b) the associated person of the shareholder.

The Governance and Nominating Committee may require the shareholder to furnish such other information as it may reasonably require or deem necessary to verify any information furnished pursuant to the nominating procedures described above or to determine the

qualifications and eligibility of the candidate proposed by the shareholder to serve on the Board. If the shareholder fails to provide such other information in writing within seven days of receipt of written request from the Governance and Nominating Committee, the recommendation of such candidate as a nominee will be deemed not properly submitted for consideration, and will not be considered, by the Committee.

The Governance and Nominating Committee will consider only one candidate submitted by such a shareholder or group for nomination for election at an annual meeting of shareholders. The Governance and Nominating Committee will not consider self-nominated candidates. The Governance and Nominating Committee will consider and evaluate candidates submitted by shareholders on the basis of the same criteria as those used to consider and evaluate candidates submitted from other sources. These criteria include the candidate's relevant knowledge, experience, and expertise, the candidate's ability to carry out his or her duties in the best interests of the Fund, and the candidate's ability to qualify as an Independent Director. When assessing a candidate for nomination, the Committee considers whether the individual's background, skills, and experience will complement the background, skills, and experience of other nominees and will contribute to the diversity of the Board.

The function of the Independent Directors Committee is to consider and take action on matters that the Board or Committee believes should be addressed in executive session of the Independent Directors, such as review and approval of the Advisory and Distribution Services Agreements. The Independent Directors Committee met four times during the Portfolios' most recently completed fiscal year.

The dollar range of the Fund's securities owned by each Director and the aggregate dollar range of securities of funds in the AB Fund Complex owned by each Director are set forth below.

	<u>DOLLAR RANGE OF EQUITY SECURITIES IN THE PORTFOLIOS AS OF DECEMBER 31, 2019*</u>	<u>AGGREGATE DOLLAR RANGE OF EQUITY SECURITIES IN THE AB FUND COMPLEX AS OF DECEMBER 31, 2019</u>
Jorge A. Bermudez**	None	None
Michael J. Downey	None	Over \$100,000

* The address for each of the Fund's Officers is 1345 Avenue of the Americas, New York, NY 10105.

** The Adviser, ABI and ABIS are affiliates of the Fund.

*** Mr. Peebles is expected to retire from the Adviser effective December 30, 2020.

The Fund's Portfolios do not pay any fees to, or reimburse expenses of, its Directors who are considered "interested persons" (as defined in Section 2(a)(19) of the 1940 Act) of the Fund. The aggregate compensation paid by the Fund's Portfolios to each of the Directors during each Portfolio's fiscal year ended December 31, 2019, the aggregate compensation paid to each of the Directors during calendar year 2019 by the AB Fund Complex, and the total number of registered investment companies (and separate investment portfolios within those companies) in the AB Fund Complex with respect to which each of the Directors serves as a director or trustee, are set forth below. Neither the Fund or its Portfolios nor any other registered investment company in the AB Fund Complex provides compensation in the form of pension or retirement benefits to any of its directors or trustees. Each of the Directors is a director or trustee of one or more registered investment companies in the AB Fund Complex.

* Mr. Bermudez was elected as a Director effective January 1, 2020.

** Ms. Loeb was elected as a Director effective April 1, 2020.

As of April 1, 2020, the Directors and officers of the Fund as a group owned less than 1% of the shares of the Fund.

Additional Information About The Portfolios' Portfolio Managers

Additional information regarding the investment professional(s)¹ primarily responsible for the day-to-day management of each Portfolio's portfolio may be found below. For additional information about the portfolio management of each Portfolio, see "Management of the Portfolios – Portfolio Managers" in the Portfolio's Prospectuses.

None of the investment professionals identified below owned any equity securities of the Portfolio directly or indirectly because shares of the Portfolio are held through the separate accounts of the Insurers.

INTERMEDIATE BOND PORTFOLIO

The day-to-day management of, and investment decisions for, the Portfolio are made by the Adviser's U.S. Core Fixed Income Investment Team. Michael Canter, Shawn E. Keegan, Douglas J. Peebles, Janaki Rao and Dimitri Silva are the investment professionals with the most significant responsibility for the day-to-day management of the Portfolio.

The following tables provide information regarding registered investment companies other than the Portfolio, other pooled investment vehicles and other accounts over which the portfolio managers also have day-to-day management responsibilities. The tables provide the numbers of such accounts, the total assets in such accounts and the number of accounts and total assets whose fees are based on performance. The information is provided as of December 31, 2019.

REGISTERED INVESTMENT COMPANIES (excluding the Portfolio)				
Portfolio Manager	Total Number of Registered Investment Companies Managed	Total Assets of Registered Investment Companies Managed	Number of Registered Investment Companies Managed with Performance-based Fees	Total Assets of Registered Investment Companies Managed with Performance-based Fees
Michael Canter	29	\$9,618,000,000	None	None
Shawn E. Keegan	1	\$212,000,000	None	None
Douglas J. Peebles	31	\$14,125,000,000	None	None
Janaki Rao	29	\$9,618,000,000	None	None
Dimitri Silva	69	\$19,502,000,000	None	None

¹ Investment professionals at the Adviser include portfolio managers and research analysts. Investment professionals are part of investment groups (or teams) that service individual fund portfolios. The number of investment professionals assigned to a particular Portfolio will vary from Portfolio to Portfolio.

Investment Professional Conflict of Interest Disclosure

As an investment adviser and fiduciary, the Adviser owes its clients and shareholders an undivided duty of loyalty. The Adviser recognizes that conflicts of interest are inherent in its business and accordingly has developed policies and procedures (including oversight monitoring) reasonably designed to detect, manage and mitigate the effects of actual or potential conflicts of interest in the area of employee personal trading, managing multiple accounts for multiple clients, including AB Mutual Funds, and allocating investment opportunities. Investment professionals, including portfolio managers and research analysts, are subject to the above-mentioned policies and oversight monitoring to ensure that all clients are treated equitably. The Adviser places the interests of its clients first and expects all of its employees to meet their fiduciary duties.

Employee Personal Trading. The Adviser has adopted a Code of Business Conduct and Ethics that is designed to detect and prevent conflicts of interest when investment professionals and other personnel of the Adviser own, buy or sell securities which may be owned by, or bought or sold for, clients. Personal securities transactions by an employee may raise a potential conflict of interest when an employee owns or trades in a security that is owned or considered for purchase or sale by a client, or recommended for purchase or sale by an employee to a client. Subject to the reporting requirements and other limitations of its Code of Business Conduct and Ethics, the Adviser permits its employees to engage in personal securities transactions, and also allows them to acquire investments in certain funds managed by the Adviser. The Adviser's Code of Business Conduct and Ethics requires disclosure of all personal accounts and maintenance of brokerage accounts with designated broker-dealers approved by the Adviser. The Code of Business Conduct and Ethics also requires preclearance of all securities transactions (except transactions in U.S. Treasuries and open-end mutual funds) and imposes a 60-day holding period for securities purchased by employees to discourage short-term trading.

Managing Multiple Accounts for Multiple Clients. The Adviser has compliance policies and oversight monitoring in place to address conflicts of interest relating to the management of multiple accounts for multiple clients. Conflicts of interest may arise when an investment professional has responsibilities for the investments of more than one account because the investment professional may be unable to devote equal time and attention to each account. The investment professional or investment professional teams for each client may have responsibilities for managing all or a portion of the investments of multiple accounts with a common investment strategy, including other registered investment companies, unregistered investment vehicles, such as hedge funds, pension plans, separate accounts, collective trusts and charitable foundations. Among other things, the Adviser's policies and procedures provide for the prompt dissemination to investment professionals of initial or changed investment recommendations by analysts so that investment professionals are better able to develop investment strategies for all accounts they manage. In addition, investment decisions by investment professionals are reviewed for the purpose of maintaining uniformity among similar accounts and ensuring that accounts are treated equitably. Investment professional compensation reflects a broad contribution in multiple dimensions to long-term investment success for clients of the Adviser and is generally not tied specifically to the performance of any particular client's account, nor is it generally tied directly to the level or change in level of assets under management.

Allocating Investment Opportunities. The investment professionals at the Adviser routinely are required to select and allocate investment opportunities among accounts. The Adviser has adopted policies and procedures intended to address conflicts of interest relating to the allocation of investment opportunities. These policies and procedures are designed to ensure that information relevant to investment decisions is disseminated promptly within its portfolio management teams and investment opportunities are allocated equitably among different clients. The policies and procedures require, among other things, objective allocation for limited investment opportunities (*e.g.*, on a rotational basis), and documentation and review of justifications for any decisions to make investments only for select accounts or in a manner disproportionate to the size of the account. Portfolio holdings, position sizes, and industry and sector exposures tend to be similar across similar accounts, which minimizes the potential for conflicts of interest relating to the allocation of investment opportunities. Nevertheless, access to portfolio funds or other investment opportunities may be allocated differently among accounts due to the particular characteristics of an account, such as size of the account, cash position, tax status, risk tolerance and investment restrictions or for other reasons.

The Adviser's procedures are also designed to address potential conflicts of interest that may arise when the Adviser has a particular financial incentive, such as a performance-based management fee, relating to an account. An investment professional may perceive that he or she has an incentive to devote more time to developing and analyzing investment strategies and opportunities or allocating securities preferentially to accounts for which the Adviser could share in investment gains.

Portfolio Manager Compensation

The Adviser's compensation program for portfolio managers is designed to align with clients' interests, emphasizing each portfolio manager's ability to generate long-term investment success for the Adviser's clients, including the Portfolios. The Adviser also strives to ensure that compensation is competitive and effective in attracting and retaining the highest caliber employees.

Portfolio managers receive a base salary, incentive compensation and contributions to AllianceBernstein's 401(k) plan. Part of the annual incentive compensation is generally paid in the form of a cash bonus, and part through an award under the firm's Incentive Compensation Award Plan (ICAP). The ICAP awards vest over a four-year period. Deferred awards are paid in the form of restricted grants of the firm's Master Limited Partnership Units, and award recipients have the ability to receive a portion of their awards in deferred cash. The amount of contributions to the 401(k) plan is determined at the sole discretion of the Adviser. On an annual basis, the Adviser endeavors to combine all of the foregoing elements into a total compensation package that considers industry compensation trends and is designed to retain its best talent.

The incentive portion of total compensation is determined by quantitative and qualitative factors. Quantitative factors, which are weighted more heavily, are driven by investment performance. Qualitative factors are driven by contributions to the investment process and client success.

The quantitative component includes measures of absolute, relative and risk-adjusted investment performance. Relative and risk-adjusted returns are determined based on the benchmark in the Portfolios' Prospectuses and versus peers over one-, three- and five-year calendar periods, with more weight given to longer-time periods. Peer groups are chosen by Chief Investment Officers, who consult with the product management team to identify products most similar to our investment style and most relevant within the asset class. Portfolio managers of the Portfolios do not receive any direct compensation based upon the investment returns of any individual client account, and compensation is not tied directly to the level or change in level of assets under management.

Among the qualitative components considered, the most important include thought leadership, collaboration with other investment colleagues, contributions to risk-adjusted returns of other portfolios in the firm, efforts in mentoring and building a strong talent pool and being a good corporate citizen. Other factors can play a role in determining portfolio managers' compensation, such as the complexity of investment strategies managed, volume of assets managed and experience.

The Adviser emphasizes four behavioral competencies—relentlessness, ingenuity, team orientation and accountability—that support its mission to be the most trusted advisor to its clients. Assessments of investment professionals are formalized in a year-end review process that includes 360-degree feedback from other professionals from across the investment teams and the Adviser.

EXPENSES OF THE PORTFOLIOS

Distribution Services Agreement

The Fund has entered into a Distribution Services Agreement (the “Agreement”) with ABI, the Fund’s principal underwriter, to permit ABI to distribute the Portfolios’ shares and to permit each Portfolio of the Fund to pay distribution services fees to defray expenses associated with distribution of its Class B shares in accordance with a plan of distribution that is included in the Agreement and that has been duly adopted and approved in accordance with Rule 12b-1 adopted by the Commission under the 1940 Act (the “Plan”).

In approving the Plan, the Directors determined that there was a reasonable likelihood that the Plan would benefit each Portfolio and its Class B shareholders. The Adviser, from time to time, and from its own funds or such other resources as may be permitted by rules of the Commission, makes payments for distribution services to ABI; the latter may in turn pay part or all of such compensation to brokers or other persons for their distribution assistance.

The Plan will continue in effect for successive one-year periods, provided that each such continuance is specifically approved at least annually by a majority of the Independent Directors of the Fund who have no direct or indirect financial interest in the operation of the Plan or in any agreement relating to the Plan (“Qualified Directors”) and by a vote of a majority of the entire Board at a meeting called for that purpose. Most recently, continuance of the Agreement

was approved for an additional annual term by the Board, including a majority of the Directors who are not parties to the Agreement or interested persons of such party, at a meeting held on May 7-9, 2019.

All material amendments to the Plan will become effective only on approval as specified in the preceding paragraph and the Plan may not be amended in order to materially increase the costs that the Portfolios may bear pursuant to the Plan without the approval of a majority of the holders of the outstanding voting shares of the Class B shares of the Portfolios.

The Agreement may be terminated with respect to a Portfolio (i) by ABI or (ii) by a Portfolio without payment of any penalty upon the vote of a majority of the outstanding voting securities of the Portfolio, voting separately by class, or by vote of a majority of the Qualified Directors. To terminate an Agreement, any party must give the other 60 days' written notice; to terminate a Plan only, a Portfolio is not required to give prior notice to ABI. The Agreement will terminate automatically in the event of an assignment. The Plan is of a type known as a "compensation plan", which means that it compensates the distributor for services rendered even if the amount paid exceeds the distributor's expenses.

In the event that the Agreement is terminated by either party or not continued with respect to the Class B shares of a Portfolio, (i) no distribution services fees (other than current amounts accrued but not yet paid) would be owed by the Fund to ABI with respect to Class B shares of such Portfolio and (ii) the Fund would not be obligated to pay ABI for any amounts expended under the Agreement not previously recovered by ABI from distribution services fees in respect of shares of such class.

During the fiscal year ended December 31, 2019, the Portfolios paid distribution services fees for expenditures under the Agreement, with respect to Class B shares, in aggregate amounts as described in the table below.

<u>Portfolio</u>	<u>Distribution services fees for expenditures payable to ABI</u>	<u>Percentage per annum of the aggregate average daily net assets attributable to Class B shares</u>
Intermediate Bond Portfolio	\$29,987	.25%
Large Cap Growth Portfolio	\$708,349	.25%
Growth and Income Portfolio	\$2,194,789	.25%
International Growth Portfolio	\$72,838	.25%

Securities Lending Agreement

State Street Bank and Trust Company (“State Street”) serves as the securities lending agent to the Portfolios and is responsible for the implementation and administration of a securities lending program pursuant to a Securities Lending Authorization Agreement (“Securities Lending Agreement”). Pursuant to the Securities Lending Agreement, State Street provides the following services: effecting loans of Portfolio securities to any person on a list of approved borrowers; determining whether a loan shall be made and negotiating and establishing the terms and conditions of the loan with the borrowing; ensuring that payments relating to distributions on loaned securities are timely and properly credited to a Portfolio’s account; collateral management (including valuation and daily mark-to-market obligations); cash collateral reinvestment in accordance with the Securities Lending Agreement; and maintaining records and preparing reports regarding loans that are made and the income derived therefrom.

The Portfolios earned income and paid fees and compensation related to their securities lending activities during the most recent fiscal year as follows:

Fees and/or compensation for securities lending activities and related services:

	Intermediate Bond Portfolio	Large Cap Growth Portfolio	Growth and Income Portfolio	International Growth Portfolio
Gross income from securities lending activities	\$0	\$34,429	\$166,554	\$23,721
Fees paid to securities lending agent from revenue split	\$0	\$(3,261)	\$(9,140)	\$(1,395)
Fees paid for any cash collateral management services (including fees deducted from a pooled cash collateral	\$0	\$0	\$0	\$0

reinvestment vehicle) that are not included in the revenue split				
Administrative fees not included in the revenue split	\$0	\$0	\$0	\$0
Indemnification fees not included in the revenue split	\$0	\$0	\$0	\$0
Rebate (paid to borrow)	\$0	\$(1,813)	\$(75,105)	\$(9,762)
Other fees not included in revenue split	\$0	\$0	\$0	\$0
Aggregate fees and/or compensation for securities lending activities	\$0	\$(5,074)	\$(84,245)	\$(11,157)
Net income from securities lending activities	\$0	\$29,355	\$82,309	\$12,564

Fees and/or compensation for securities lending activities and related services:

	Global Thematic Growth Portfolio	Small Cap Growth Portfolio	International Value Portfolio	Small/Mid Cap Value Portfolio

PURCHASE AND REDEMPTION OF SHARES

The following information supplements that set forth in the Portfolios' Prospectuses under the heading "Investing in the Portfolios".

Shares of each Portfolio are offered at NAV on a continuous basis to the separate accounts of the Insurers without any sales or other charge. The separate accounts of insurance companies place orders to purchase shares based on, among other things, the amount of premium payments to be invested and surrendered and transfer requests to be effected pursuant to variable contracts funded by shares of the Portfolio. The Fund reserves the right to suspend the sale of its shares in response to conditions in the securities markets or for other reasons. See the prospectus of the separate account of the participating insurance company for more information on the purchase of shares.

The Insurers maintain omnibus account arrangements with the Fund in respect of one or more Portfolios and place aggregate purchase, redemption and exchange orders for shares of a Portfolio corresponding to orders placed by the Insurers' customers ("Contractholders") who have purchased contracts from the Insurers, in each case, in accordance with the terms and conditions of the relevant contract. Omnibus account arrangements maintained by the Insurers are discussed below.

Redemption of Shares

An insurance company separate account may redeem all or any portion of the shares in its account at any time at the NAV next determined after a redemption request in the proper form is furnished to the Fund. Any certificates representing shares being redeemed must be submitted with the redemption request. Shares do not earn dividends on the day they are redeemed, regardless of whether the redemption request is received before or after the time of computation of NAV that day. There is no redemption charge. The Portfolios expect that it will typically take up to three business days following the receipt of a redemption request in proper form to pay out redemption proceeds. However, while not expected, payment of redemption proceeds may take up to seven days after the day a request is received in proper form by a Portfolio by the close of regular trading on any day the New York Stock Exchange (the

“Exchange”) is open (ordinarily, 4:00 p.m., Eastern time, but sometimes earlier, as in the case of scheduled half-day trading or unscheduled suspensions of trading).

The right of redemption may be suspended or the date of payment may be postponed for any period during which the Exchange is closed (other than customary weekend and holiday closings) or during which the Commission determines that trading thereon is restricted, or for any period during which an emergency (as determined by the Commission) exists as a result of which disposal by the Fund of securities owned by a Portfolio is not reasonably practicable or as a result of which it is not reasonably practicable for the Fund fairly to determine the value of a Portfolio’s net assets, or for such other periods as the Commission may by order permit for the protection of security holders of the Portfolios. For information regarding how to redeem shares in the Portfolios, please see your insurance company’s separate account prospectus.

Payment of the redemption price normally will be made in cash but may be made, at the option of a Portfolio, in kind. The value of a shareholder’s shares on redemption or repurchase may be more or less than the cost of such shares to the shareholder, depending upon the market value of the Portfolio’s securities at the time of such redemption or repurchase. Payment either in cash or in portfolio securities received by a shareholder upon redemption or repurchase of his shares, assuming the shares constitute capital assets in his hands, will result in long-term or short-term capital gains (or losses) depending upon the shareholder’s holding period and basis in respect of the shares redeemed.

Payments to Financial Intermediaries

Financial intermediaries, such as the Insurers, market and sell shares of the Portfolios and typically receive compensation for selling shares of the Portfolios. This compensation is paid from various sources, including any Rule 12b-1 fee that you or the Portfolios may pay.

In the case of Class B shares, up to 100% of the Rule 12b-1 fee applicable to Class B shares each year may be paid to the financial intermediary that sells Class B shares.

Insurers or your financial intermediary receive compensation from the Portfolios, ABI and/or the Adviser in several ways from various sources, which include some or all of the following:

- Rule 12b-1 fees;
- defrayal of costs for educational seminars and training;
- additional distribution support; and
- payments related to providing recordkeeping and/or transfer agency services.

Please read your Portfolio’s Prospectus carefully for information on this compensation.

ABI and/or the Adviser may pay Insurers or other financial intermediaries to perform recordkeeping and administrative services in connection with the Portfolios. Such payments will generally not exceed 0.35% of the average daily net assets of each Portfolio attributable to the Insurer.

Other Payments for Educational Support and Distribution Assistance. In addition to the fees described above, ABI, at its expense, currently provides additional payments to the Insurers. These sums include payments to reimburse directly or indirectly the costs incurred by the Insurers and their employees in connection with educational seminars and training efforts about the Portfolios for the Insurers' employees and/or their clients and potential clients and may include payments for distribution analytical data regarding Portfolio sales by the Insurer. The costs and expenses associated with these efforts may include travel, lodging, entertainment and meals.

For 2020, ABI's additional payments to these firms for distribution services and educational support are expected to be approximately \$350,000. In 2019, ABI paid additional payments of approximately \$370,000 for the Portfolios.

If one mutual fund sponsor that offers shares to separate accounts of an Insurer makes greater distribution assistance payments than another, the Insurer may have an incentive to recommend or offer the shares of funds of one fund sponsor over another.

Please speak with your financial intermediary to learn more about the total amounts paid to your financial intermediary by the Fund, the Adviser, ABI and by other mutual fund sponsors that offer shares to Insurers that may be recommended to you. You should also consult disclosures made by your financial intermediary at the time of purchase.

ABI anticipates that the Insurers or their affiliates that will receive additional payments for educational support include:

- AIG
- AXA Equitable
- Brighthouse Life Insurance Company
- Lincoln Financial Distributors
- Pacific Life Insurance Company
- Prudential Financial
- Riversource Life Insurance Company
- Transamerica Capital
- Variable Annuity Life Insurance Company

Although the Portfolios may use brokers and dealers who sell shares of the Portfolios to effect portfolio transactions, the Portfolios do not consider the sale of AB Mutual Fund Shares as a factor when selecting brokers or dealers to effect portfolio transactions.

NET ASSET VALUE

For all of the Portfolios the NAV of each Portfolio is calculated at the close of regular trading on any day the Exchange is open (ordinarily 4:00 p.m., Eastern Time, but sometimes earlier, as in the case of scheduled half-day trading or unscheduled suspensions of trading) following receipt of a purchase or redemption order by a Portfolio on each Portfolio business day on which such an order is received and on such other days as the Board deems appropriate or necessary in order to comply with Rule 22c-1 under the 1940 Act. Each Portfolio's per share NAV is calculated by dividing the value of a Portfolio's total assets, less its liabilities, by the total number of its shares then outstanding. A Portfolio business day is any weekday on which the Exchange is open for trading.

Portfolio securities are valued at current market value or, if market quotations are not readily available or are unreliable, at fair value as determined in accordance with applicable rules under the 1940 Act and the Portfolio's pricing policies and procedures (the "Pricing Policies") established by and under the general supervision of the Board. The Board has delegated to the Adviser, subject to the Board's continuing oversight, certain of the Board's duties with respect to the Pricing Policies. The Adviser has established a Valuation Committee, which operates under policies and procedures approved by the Board, to value a Portfolio's assets on behalf of the Portfolio.

Whenever possible, securities are valued based on market information on the business day as of which the value is being determined, as follows:

- (a) an equity security listed on the Exchange, or on another national or foreign exchange (other than securities listed on the Nasdaq Stock Exchange ("NASDAQ")) is valued at the last sale price reflected on the consolidated tape at the close of the exchange. If there has been no sale on the relevant business day, the security is then valued at the last traded price;
- (b) an equity security traded on NASDAQ is valued at the NASDAQ Official Closing Price;
- (c) an OTC equity security is valued at the mid level between the current bid and ask prices. If the mid price is not available, the security will be valued at the bid price. An equity security traded on more than one exchange is valued in accordance with paragraph (a) above by reference to the principal exchange on which the security is traded (as determined by the Adviser);
- (d) a listed or OTC put or call option is valued at the mid level between the current bid and ask prices (for options or futures contracts, see item (e)). If neither a current bid nor a current ask price is available, the Adviser will have discretion to determine the best valuation (*e.g.*, last trade price) and then bring the issue to the Board's Valuation Committee the next day;

(e) an open futures contract and any option thereon are valued at the closing settlement price or, in the absence of such a price, the most recent quoted bid price. If there are no quotations available for the relevant business day, the security is valued at the last available closing settlement price;

(f) a listed right is valued at the last traded price provided by approved vendors. If there has been no sale on the relevant business day, the right is valued at the last traded price from the previous day. On the following day, the security is valued in good faith at fair value. For an unlisted right, the calculation used in determining a value is the price of the reference security minus the subscription price multiplied by the terms of the right. There may be some instances when the subscription price is greater than the referenced security right. In such instances, the right would be valued as worthless;

(g) a listed warrant is valued at the last traded price provided by approved vendors. If there is no sale on the relevant business day, the warrant is valued at the last traded price from the previous day. On the following day, the security is valued in good faith at fair value. All unlisted warrants are valued in good faith at fair value. Once a warrant has expired, it will no longer be valued;

(h) preferred securities are valued based on prices received from approved vendors that use last trade data for listed preferreds and evaluated bid prices for non-listed preferreds, as well as for listed preferreds when there is no trade activity;

(i) U.S. Government securities and any other debt instrument having 60 days or less remaining until maturity generally are valued at market by an independent pricing service, if a market price is available. If a market price is not available, the securities are valued at amortized cost. This methodology pertains to short-term securities that have an original maturity of 60 days or less, as well as short term securities that had an original term to maturity that exceeded 60 days. In instances in which amortized cost is utilized, the Valuation Committee must reasonably conclude that the utilization of amortized cost is approximately the same as the fair value of the security. The factors the Valuation Committee will consider include, but are not limited to, an impairment of the creditworthiness of the issuer or material changes in interest rates. The Adviser is responsible for monitoring any instances when a market price is not applied to a short term security and will report any instances to the Valuation Committee for review;

(j) a fixed-income security is typically valued on the basis of bid prices provided by an approved pricing vendor when the Adviser reasonably believes that such prices reflect the fair market value of the security. In certain markets, the market convention may be to use the mid price between bid and offer. Fixed-income securities may be valued on the basis of mid prices when such prices reflect the conventions of the particular markets. The prices provided by an approved pricing vendor may take into account many factors, including institutional size, trading in similar groups of securities and any developments related to specific securities. If the Adviser determines that an appropriate pricing vendor does not exist for a security in a market that typically values such security on the basis of a bid price, the security is valued on the basis of a quoted bid price or spread over the applicable yield curve (a bid spread) by a broker/dealer in such security. If the Adviser receives multiple broker quotes, the Adviser will utilize the brokerage quote that it believes is the most reliable (*e.g.*, a market maker for that

security). If the Adviser receives multiple broker quotes that are deemed to be reliable, then the Adviser will utilize the second highest broker quote. If an appropriate pricing vendor does not exist for a security in a market where convention is to use the mid price, the security is valued on the basis of a quoted mid price by a broker-dealer in such security;

(k) bank loans are valued on the basis of bid prices provided by a pricing vendor;

(l) bridge loans are valued at fair value, which equates to the outstanding loan amount, unless it is determined by the Adviser that any particular bridge loan should be valued at something other than the outstanding loan amount. This may occur due to, for example, a significant change in the high yield market and/or a significant change in the status of any particular issuer or issuers of bridge loans;

(m) whole loans: residential and commercial mortgage whole loans and whole loan pools are market priced by an approved vendor or broker-dealer;

(n) forward and spot currency pricing is provided by an independent pricing vendor. The rate provided by the approved vendor is a mid price for forward and spot rates. In most instances whenever both an “onshore” rate and an “offshore” (*i.e.*, NDF) rate is available, the Adviser will use the offshore (NDF) rate. NDF contracts are used for currencies where it is difficult (and sometimes impossible) to take actual delivery of the currency;

(o) OTC derivatives pricing: various independent pricing vendors are used to obtain derivatives values or obtain information used to derive a price for each investment. This information is placed into various pricing models that can be sourced by the Adviser or from approved vendors (depending on the type of derivative) to derive a price for each investment. These pricing models are monitored/reviewed on an ongoing basis by the Adviser;

(p) mutual funds and other pooled vehicles: the Adviser receives pricing information for mutual funds and other pooled vehicles from various sources (including AB Global Fund Administrator and the external custodian banks). Open-end mutual funds are valued at the closing NAV per share and closed-end funds and ETFs are valued at the closing market price per share;

(q) repurchase agreements and reverse repurchase agreements: repurchase agreements and reverse repurchase agreements will be valued based on their original cost plus accrued interest;

(r) hedge funds: hedge funds will be priced at the most recent available closing NAV per share;

(s) equity-linked notes: prices are sourced at the end of the pricing day from approved vendors. The vendor methodology is to source the relevant underlying non-U.S. dollar exchange closing prices and convert them to U.S. dollars; and

(t) credit-linked notes: prices are sourced on the reference bond consistent with fixed-income security methodology as noted above, which are passed through as the price on the credit-linked note. Alternatively, broker marks are obtained.

If the Adviser becomes aware of any news/market events that would cause the Valuation Committee to believe the last traded or market-based price, as applicable, does not reflect fair value, the security is then valued in good faith at fair value by, or in accordance with, procedures approved by the Board.

When a Portfolio uses fair value pricing, it may take into account any factors it deems appropriate. A Portfolio may determine fair value based upon developments related to a specific security, current valuations of foreign stock indices (as reflected in U.S. futures markets) and/or U.S. sector or broader stock market indices. The prices of securities used by a Portfolio to calculate its NAV may differ from quoted or published prices for the same securities. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security is materially different than the value that could be realized upon the sale of that security.

Each Portfolio expects to use fair value pricing for securities primarily traded on U.S. exchanges only under very limited circumstances, such as the early closing of the exchange on which a security is traded or suspension of trading in the security. A Portfolio may use fair value pricing more frequently for securities primarily traded in non-U.S. markets because, among other things, most foreign markets close well before each Portfolio ordinarily values its securities at 4:00 p.m., Eastern Time. The earlier close of these foreign markets gives rise to the possibility that significant events, including broad market moves, may have occurred in the interim. For example, a Portfolio believes that foreign security values may be affected by events that occur after the close of foreign securities markets. To account for this, the Portfolio may frequently value many of its foreign equity securities using fair value prices based on third party vendor modeling tools to the extent available.

Each Portfolio's Board may suspend the determination of its NAV (and the offering and sale of shares), subject to the rules of the Commission and other governmental rules and regulations, at a time when: (1) the Exchange is closed, other than customary weekend and holiday closings, (2) an emergency exists as a result of which it is not reasonably practicable for a Portfolio to dispose of securities owned by it or to determine fairly the value of its net assets, or (3) for the protection of shareholders, the Commission by order permits a suspension of the right of redemption or a postponement of the date of payment on redemption.

For purposes of determining each Portfolio's NAV per share, all assets and liabilities initially expressed in a foreign currency will be converted into U.S. Dollars at the mean of the current bid and ask prices of such currency against the U.S. Dollar last quoted by a major bank that is a regular participant in the relevant foreign exchange market or on the basis of a pricing service that takes into account the quotes provided by a number of such major banks. If such quotations are not available as of the close of the Exchange, the rate of exchange will be determined in good faith by, or under the direction of, the Board.

The assets attributable to the Class A shares and Class B shares are invested together in a single portfolio for each Portfolio. The NAV of each class will be determined

separately by subtracting the liabilities allocated to that class from the assets belonging to that class in conformance with the provisions of a plan adopted by each Portfolio in accordance with Rule 18f-3 under the 1940 Act.

PORTFOLIO TRANSACTIONS

Subject to the general oversight of the Board, the Adviser is responsible for the investment decisions and the placing of orders for portfolio transactions of the Portfolios. The Adviser determines the broker or dealer to be used in each specific transaction with the objective of negotiating a combination of the most favorable commission (for transactions on which a commission is payable) and the best price obtainable on each transaction (generally defined as “best execution”). In connection with seeking best price and execution, the Portfolios do not consider sales of shares of the Portfolios or other investment companies managed by the Adviser as a factor in the selection of brokers and dealers to effect portfolio transactions and has adopted a policy and procedures reasonably designed to preclude such considerations.

When consistent with the objective of obtaining best execution, brokerage may be directed to persons or firms supplying investment information to the Adviser. There may be occasions where the transaction cost charged by a broker may be greater than that which another broker may charge if a Portfolio determines in good faith that the amount of such transaction cost is reasonable in relation to the value of the brokerage, research and statistical services provided by the executing broker.

Neither the Portfolios nor the Adviser has entered into agreements or understandings with any brokers or dealers regarding the placement of securities transactions because of research or statistical services they provide. A broker-dealer may provide the Adviser with research or related services with an expectation, but not necessarily an explicit agreement or contract, that the Adviser will use the broker-dealer to execute client transactions in the future. To the extent that such persons or firms supply investment information to the Adviser for use in rendering investment advice to a Portfolio, such information may be supplied at no cost to the Adviser and, therefore, may have the effect of reducing the expenses of the Adviser in rendering advice to the Portfolio. While it is impracticable to place an actual dollar value on such investment information, the Adviser believes that its receipt probably does not reduce the overall expenses of the Adviser to any material extent.

The investment information provided to the Adviser is of the type described in Section 28(e)(3) of the Securities Exchange Act of 1934, as amended, and is designed to augment the Adviser’s own internal research and investment strategy capabilities. Research and statistical services furnished by brokers through which the Fund effects securities transactions are used by the Adviser in carrying out its investment management responsibilities with respect to all its client accounts but not all such services may be utilized by the Adviser in connection with the Portfolios.

The extent to which commissions that will be charged by broker-dealers selected by a Portfolio may reflect an element of value for research cannot presently be determined. To the extent that research services of value are provided by broker-dealers with or through whom the Portfolio places portfolio transactions, the Adviser may be relieved of expenses which it might otherwise bear. Research services furnished by broker-dealers as a result of the placement of portfolio transactions could be useful and of value to the Adviser in servicing its other clients as well as the Portfolio; on the other hand, certain research services obtained by the Adviser as a result of the placement of portfolio brokerage of other clients could be useful and of value to it in servicing the Portfolio.

A Portfolio may deal in some instances in equity securities which are not listed on a national securities exchange but are traded in the OTC market. In addition, most transactions for the Intermediate Bond Portfolio are executed in the OTC market. Where transactions are executed in the OTC market, a Portfolio will seek to deal with the primary market makers, but when necessary in order to obtain the best price and execution, it will utilize the services of others. In all cases, the Portfolio will attempt to negotiate best execution.

The Portfolios' portfolio transactions in equity securities may occur on foreign stock exchanges. Transactions on stock exchanges involve the payment of brokerage commissions. On many foreign stock exchanges these commissions are fixed. Securities traded in foreign OTC markets (including most fixed-income securities) are purchased from and sold to dealers acting as principal. OTC transactions generally do not involve the payment of a stated commission, but the price usually includes an undisclosed commission or markup. The prices of underwritten offerings, however, generally include a stated underwriter's discount. The Adviser expects to effect the bulk of its transactions in securities of companies based in foreign countries through brokers, dealers or underwriters located in such countries. U.S. Government or other U.S. securities constituting permissible investments will be purchased and sold through U.S. brokers, dealers or underwriters.

Investment decisions for a Portfolio are made independently from those for other investment companies and other advisory accounts managed by the Adviser. It may happen, on occasion, that the same security is held in the portfolio of a Portfolio and one or more of such other companies or accounts. Simultaneous transactions are likely when several funds or accounts are managed in accordance with a similar strategy by the Adviser, particularly when a security is suitable for the investment objectives of more than one of such companies or accounts. When two or more companies or accounts managed by the Adviser are simultaneously engaged in the purchase or sale of the same security, the transactions are allocated to the respective companies or accounts both as to amount and price, in accordance with a method deemed equitable to each company or account. In some cases, this system may adversely affect the price paid or received by a Portfolio or the size of the position obtainable for the Portfolio.

Allocations are made by the officers of a Portfolio or of the Adviser. Purchases and sales of portfolio securities are determined by the Adviser and are placed with broker-dealers by the trading department of the Adviser.

The aggregate brokerage commissions paid by the Portfolios during the three most recent fiscal years are set forth below:

<u>Portfolio</u>	<u>Fiscal Year Ended December 31</u>	<u>Aggregate Amount of Brokerage Commissions</u>
Intermediate Bond Portfolio	2017	\$2,254
	2018	23,237
	2019	1,252
Large Cap Growth Portfolio	2017	\$85,229
	2018	64,272
	2019	40,960

	2018	108,652
	2019	100,886
Global Risk Allocation—Moderate Portfolio	2017	\$71,510
	2018	121,168
	2019	48,839

The Fund may, from time to time, place orders for the purchase or sale of securities (including listed call options) with Sanford C. Bernstein & Co. and Sanford C. Bernstein Limited, affiliates of the Adviser (the “Affiliated Brokers”). In such instances, the placement of orders with such brokers would be consistent with each Portfolio’s objective of obtaining best execution and would not be dependent upon the fact that the Affiliated Brokers are affiliates of the Adviser. With respect to orders placed with the Affiliated Brokers for execution on a securities exchange, commissions received must conform to Section 17(e)(2)(A) of the 1940 Act and Rule 17e-1 thereunder, which permit an affiliated person of a registered investment company (such as the Fund), or any affiliated person of such person, to receive a brokerage commission from such registered investment company provided that such commission is reasonable and fair compared to the commissions received by other brokers in connection with comparable transactions involving similar securities during a comparable period of time.

The aggregate amount of brokerage commissions paid to Affiliated Brokers during each Portfolio’s three most recent fiscal years, and, during the most recent fiscal year, the Affiliated Brokers’ percentage of the aggregate brokerage commissions and the aggregate dollar amount of brokerage transactions, respectively, are set forth below:

<u>Portfolio</u>	<u>Fiscal Year Ended December 31</u>	<u>Aggregate Amount of Brokerage Commissions Paid to Affiliated Brokers</u>	<u>% of Portfolio’s Aggregate Brokerage Commissions Paid to Affiliated Brokers</u>	<u>% of Portfolio’s Aggregate Dollar Amount of Brokerage Transactions Involving the Payment of Commissions Through Affiliated Brokers</u>

	Nomura Holdings, Inc.	\$199,939
	UBS Group AG	\$534,469

Disclosure of Portfolio Holdings

The Fund believes that the ideas of the Adviser's investment staff should benefit the Portfolios and their shareholders, and does not want to afford speculators an opportunity to profit by anticipating Portfolio trading strategies or using Portfolio information for stock picking. However, the Fund also believes that knowledge of each Portfolio's portfolio holdings can assist shareholders in monitoring their investment, making asset allocation decisions, and evaluating portfolio management techniques.

The Adviser has adopted, on behalf of the Portfolios, policies and procedures relating to disclosure of the Portfolios' portfolio securities. The policies and procedures relating to disclosure of the Portfolios' portfolio securities are designed to allow disclosure of portfolio holdings information where necessary to the operation of the Portfolios or useful to the Portfolios' shareholders without compromising the integrity or performance of the Portfolios. Except when there are legitimate business purposes for selective disclosure and other conditions (designed to protect the Portfolios and their shareholders) are met, the Portfolios do not provide or permit others to provide information about a Portfolio's portfolio holdings on a selective basis.

The Portfolios include portfolio holdings information as required in regulatory filings and shareholder reports, disclose portfolio holdings information as required by federal or state securities laws and may disclose portfolio holdings information in response to requests by governmental authorities. In addition, the Adviser may post portfolio holdings information on the Adviser's website (www.abfunds.com). For each portfolio security, the posted information includes its name, the number of shares held by a Portfolio, the market value of the Portfolio's holdings, and the percentage of the Portfolio's assets represented by the Portfolio's holdings. The day after portfolio holdings information is publicly available on the website, it may be mailed, e-mailed or otherwise transmitted to any person.

The Adviser may distribute or authorize the distribution of information about a Portfolio's portfolio holdings that is not publicly available, on the website or otherwise, to the Adviser's employees and affiliates that provide services to the Fund. In addition, the Adviser may distribute or authorize distribution of information about a Portfolio's portfolio holdings that is not publicly available, on the website or otherwise, to the Fund's service providers who require access to the information in order to fulfill their contractual duties relating to the

Portfolios, to facilitate the review of the Portfolios by rating agencies, for the purpose of due diligence regarding a merger or acquisition, or for the purpose of effecting in-kind redemption of securities to facilitate orderly redemption of portfolio assets and minimal impact on remaining Portfolio shareholders. The Adviser does not expect to disclose information about a Portfolio's portfolio holdings that is not publicly available to the Portfolio's individual or institutional investors or to intermediaries that distribute the Portfolio's shares. Information may be disclosed with any frequency and any lag, as appropriate.

Before any non-public disclosure of information about a Portfolio's portfolio holdings is permitted, however, the Adviser's Chief Compliance Officer (or his designee) must determine that the Portfolio has a legitimate business purpose for providing the portfolio holdings information, that the disclosure is in the best interests of the Portfolio's shareholders, and that the recipient agrees or has a duty to keep the information confidential and agrees not to trade directly or indirectly based on the information or to use the information to form a specific recommendation about whether to invest in the Portfolio or any other security. Under no circumstances may the Adviser or its affiliates receive any consideration or compensation for disclosing the information.

The Adviser has established procedures to ensure that a Portfolio's portfolio holdings information is only disclosed in accordance with these policies. Only the Adviser's Chief Compliance Officer (or his designee) may approve the disclosure, and then only if he or she and a designated senior officer in the Adviser's product management group determine that the disclosure serves a legitimate business purpose of a Portfolio and is in the best interest of the Portfolio's shareholders. The Adviser's Chief Compliance Officer (or his designee) approves disclosure only after considering the anticipated benefits and costs to the Portfolio and its shareholders, the purpose of the disclosure, any conflicts of interest between the interests of the Portfolio and its shareholders and the interests of the Adviser or any of its affiliates, and whether the disclosure is consistent with the policies and procedures governing disclosure. Only someone approved by the Adviser's Chief Compliance Officer (or his designee) may make approved disclosures of portfolio holdings information to authorized recipients. The Adviser reserves the right to request certifications from senior officers of authorized recipients that the recipient is using the portfolio holdings information only in a manner consistent with the Adviser's policy and any applicable confidentiality agreement. The Adviser's Chief Compliance Officer (or his designee) or another member of the compliance team reports all arrangements to disclose portfolio holdings information to the Fund's Board on a quarterly basis. If the Directors determine that disclosure was inappropriate, the Adviser will promptly terminate the disclosure arrangement.

In accordance with these procedures, each of the following third parties has been approved to receive information concerning the Portfolios' portfolio holdings: (i) the Fund's independent registered public accounting firm, for use in providing audit opinions; (ii) Data Communique International, Donnelley Financial Solutions, Inc. and, from time to time, other financial printers, for the purpose of preparing Portfolio regulatory filings; (iii) the Fund's custodian in connection with its custody of the assets of the Portfolios; (iv) Institutional Shareholder Services, Inc. for proxy voting services; and (v) data aggregators, such as Vestek. Information may be provided to these parties at any time with no time lag. Each of these parties is contractually and ethically prohibited from sharing a Portfolio's portfolio holdings information unless specifically authorized.

Tax Management

Bernstein Private Wealth Management (“Bernstein”), an affiliate of the Adviser, provides certain tax management services to its private clients that invest in the Funds through investment programs administered by Bernstein. As part of such services, Bernstein conducts year-end tax trading on behalf of these private clients to offset capital gains taxes where possible, which may result in buying and selling shares in one or more of the Funds, which could in turn result in a Fund experiencing temporary asset inflows or outflows at year end. Bernstein coordinates with the Adviser to try to ensure that the implementation of Bernstein’s tax management strategies does not compromise the interests of any Fund or its shareholders. However, the implementation of Bernstein’s tax management strategies may require a Fund to increase asset allocations to cash or cash equivalents in order to meet expected redemption requests. If a significant amount of a Fund’s assets are allocated to cash or cash equivalents, it may be more difficult for the Fund to achieve its investment objective. Implementation of Bernstein’s tax management strategies may also require a Fund to incur transaction costs, which will reduce its return.

DIVIDENDS, DISTRIBUTIONS AND TAXES

Each Portfolio of the Fund qualified and intends to continue to qualify to be taxed as a regulated investment company under the Code. If so qualified, each Portfolio will not be subject to federal income and excise taxes on its investment company taxable income and net capital gain to the extent such investment company taxable income and net capital gain are distributed to the separate accounts of insurance companies which hold its shares. Under current tax law, capital gains or dividends from any Portfolio are not currently taxable to the holder of a variable annuity or variable life insurance contract when left to accumulate within such variable annuity or variable life insurance contract. Distributions of net investment income and net short-term capital gains will be treated as ordinary income and distributions of net long-term capital gains will be treated as long-term capital gain in the hands of the insurance companies.

Investment income received by a Portfolio from sources within foreign countries may be subject to foreign income taxes withheld at the source. If more than 50% of the value of a Portfolio’s total assets at the close of its taxable year consists of stocks or securities of foreign corporations (which for this purpose should include obligations issued by foreign governments), such Portfolio will be eligible to file an election with the Internal Revenue Service to pass through to its shareholders the amount of foreign taxes paid by the Portfolio. If eligible, each such Portfolio intends to file such an election, although there can be no assurance that such Portfolio will be able to do so.

Section 817(h) of the Code requires that the investments of a segregated asset account of an insurance company be adequately diversified, in accordance with Treasury Regulations promulgated thereunder, in order for the holders of the variable annuity contracts or variable life insurance policies underlying the account to receive the tax-deferred or tax-free treatment generally afforded holders of annuities or life insurance policies under the Code. The

Department of the Treasury has issued Regulations under section 817(h) that, among other things, provide the manner in which a segregated asset account will treat investments in a regulated investment company for purposes of the applicable diversification requirements. Under the Regulations, an insurance company segregated account is permitted to look-through a Portfolio to satisfy asset diversification tests and treat its underlying securities, rather than the Portfolio, as investments subject to certain diversification limits. A Portfolio will be considered adequately diversified if no more than 55% of its assets are represented by any one investment, no more than 70% of its assets are represented by any two investments, no more than 80% of its assets are represented by any three investments and no more than 90% of its assets are represented by any four investments. For this purpose, all securities issued by an issuer are treated as a single investment. Each Portfolio plans to satisfy these conditions at all times so that the shares of such Portfolio owned by a segregated asset account of a life insurance company will be subject to this treatment under the Code.

For information concerning the federal income tax consequences for the holders of variable annuity contracts and variable life insurance policies, such holders should consult the prospectus used in connection with the issuance of their particular contracts or policies.

GENERAL INFORMATION

Description of the Portfolios

The Fund was organized as a Maryland corporation in 1987 under the name “Alliance Variable Products Series Fund, Inc.” The name of the Fund became “AllianceBernstein Variable Products Series Fund, Inc.” on May 1, 2003 and “AB Variable Products Series Fund, Inc.” on March 30, 2015.

All shares of the Fund when duly issued will be fully paid and nonassessable. The Board is authorized to reclassify any unissued shares into any number of additional series and classes without shareholder approval. Accordingly, the Board in the future, for reasons such as the desire to establish one or more additional Portfolio’s with different investment objectives, policies or restrictions or to establish additional channels of distribution, may create additional series and classes of shares. Any issuance of shares of such additional series and classes would be governed by the 1940 Act and the laws of the State of Maryland.

Generally, shares of each Portfolio would vote as a single series for the election of directors and on any other matter that affected each Portfolio in substantially the same manner. As to matters affecting each Portfolio differently, such as approval of the Advisory Agreement and changes in investment policy, shares of each Portfolio would vote as separate series. Moreover, the Class B shares of each Portfolio will vote separately with respect to matters relating to the 12b-1 Plan(s) adopted in accordance with Rule 12b-1 under the 1940 Act.

It is anticipated that annual meetings of shareholders will not be held; shareholder meetings will only be held when required by federal or state law or in accordance with an undertaking by the Adviser to the Commission. Shareholders have available certain procedures for the election of Directors.

Pursuant to an order received from the Commission, the Fund maintains participation agreements with insurance company separate accounts that obligate the insurance companies to pass any proxy solicitations through to underlying Contractholders who in turn are asked to designate voting instructions. In the event that an insurance company does not receive voting instructions from Contractholders, it is obligated to vote the shares that correspond to such Contractholders in the same proportion as instructions received from all other applicable Contractholders.

Principal and Controlling Holders

AB INTERMEDIATE BOND PORTFOLIO

To the knowledge of the Portfolio, as of April 1, 2020, the persons below owned of record or beneficially 5% or more of the noted class of outstanding shares of the Portfolio. A shareholder who beneficially owns more than 25% of a Portfolio's outstanding voting securities is presumed to "control" the Portfolio, as that term is defined in the 1940 Act, and may have a significant impact on matters submitted to a shareholder vote. To the knowledge of the Portfolio, no person beneficially owned more than 25% of the Portfolio's outstanding voting securities as of April 1, 2020.

Custodian and Accounting Agent

State Street, c/o State Street Corporation CCB/5, 1 Iron Street, Boston, Massachusetts 02210, acts as the custodian and as accounting agent for the Fund but plays no part in deciding the purchase or sale of portfolio securities. Subject to the supervision of the Board, State Street may enter into subcustodial agreements for the holding of the Fund's securities of foreign issuers.

Principal Underwriter

ABI, an indirect wholly-owned subsidiary of the Adviser, located at 1345 Avenue of the Americas, New York, NY 10105, is the Fund's Principal Underwriter.

Transfer Agent

ABIS, an indirect wholly-owned subsidiary of the Adviser located principally at 8000 IH 10 W, 13th Floor, San Antonio, Texas 78230, acts as the transfer agent for the Fund. ABIS registers the transfer, issuance and redemption of Fund shares and disburses dividends and other distributions to Fund shareholders.

Counsel

Legal matters in connection with the issuance of the shares of the Fund offered hereby are passed upon by Seward & Kissel LLP, 901 K Street NW, Suite 800, Washington, DC 20001.

Independent Registered Public Accounting Firm

Ernst & Young LLP, 5 Times Square, New York, NY, 10036, has been appointed as the independent registered public accounting firm for the Fund.

Code of Ethics And Proxy Voting Policies And Procedures

The Fund, the Adviser and ABI have each adopted codes of ethics pursuant to Rule 17j-1 of the 1940 Act. These codes of ethics permit personnel subject to the codes to invest in securities, including securities that may be purchased or held by the Fund.

The Fund has adopted the Adviser's proxy voting policies and procedures. A description of the Adviser's proxy voting policies and procedures is attached as Appendix A.

Information regarding how the Portfolios voted proxies related to portfolio securities during the most recent 12-month period ended June 30 is available (1) without charge, upon request, by calling (800) 227-4618; or through the Fund's website at www.abfunds.com; or both; and (2) on the Commission's website at www.sec.gov.

FINANCIAL STATEMENTS AND REPORT OF INDEPENDENT REGISTERED PUBLIC
ACCOUNTING FIRM

The financial statements of the Portfolios of the Fund for the fiscal year ended December 31, 2019 and the report of Ernst & Young LLP, independent registered public accounting firm, are incorporated herein by reference to the Portfolios' annual report. The annual report was filed on Form N-CSR with the Commission on February 24, 2020. It is available without charge upon request by calling ABIS at (800) 227-4618 or on the Internet at www.abfunds.com.

Proxy Voting and Governance Policy Statement

Introduction

As an investment adviser, we are shareholder advocates and have a fiduciary duty to make investment decisions that are in our clients' best interests by maximizing the value of their shares. Proxy voting is an integral part of this process, through which we support strong corporate governance structures, shareholder rights and transparency.

We have an obligation to vote proxies in a timely manner and we apply the principles in our Proxy Voting and Governance Policy ("**Proxy Voting and Governance Policy**" or "**Policy**") and this policy statement to our proxy decisions. We believe a company's environmental, social and governance ("**ESG**") practices may have a significant effect on the value of the company, and we take these factors into consideration when voting. For additional information regarding our ESG policies and practices, please refer to our firm's Statement of Policy Regarding Responsible Investment ("**RI Policy**").

Our Proxy Voting and Governance Policy, which outlines our policies for proxy voting and includes a wide range of issues that often appear on proxies, applies to all of AB's investment management subsidiaries and investment services groups investing on behalf of clients globally. Both this Statement and the Policy are intended for use by those involved in the proxy voting decision-making process and those responsible for the administration of proxy voting ("**Proxy Managers**"), in order to ensure that our proxy voting policies and procedures are implemented consistently. Copies of the Policy, the RI Policy and our voting records, as noted below in "Voting Transparency", can be found on our Internet site (www.alliancebernstein.com).

We sometimes manage accounts where proxy voting is directed by clients or newly-acquired subsidiary companies. In these cases, voting decisions may deviate from the Policy.

Research Underpins Decision Making

As a research-driven firm, we approach our proxy voting responsibilities with the same commitment to rigorous research and engagement that we apply to all our investment activities. The different investment philosophies utilized by our investment teams may occasionally result in different conclusions being drawn regarding certain proposals and, in turn, may result in the Proxy Manager making different voting decisions on the same proposal. Nevertheless, the Proxy Manager votes proxies with the goal of maximizing the value of the securities in client portfolios.

In addition to our firm-wide proxy voting policies, we have a Proxy Voting and Governance Committee, which provides oversight and includes senior investment professionals from Equities, Legal personnel and Operations personnel. It is the responsibility of the Proxy Voting and Governance Committee to evaluate and maintain proxy voting procedures and guidelines, to evaluate proposals and issues not covered by these guidelines, to consider changes in policy, and to review this Statement and the Policy no less frequently than annually. In addition, the Proxy Voting and Governance Committee meets at least three times a year and as necessary to address special situations.

Research Services

We subscribe to the corporate governance and proxy research services of Institutional Shareholder Services (“ISS”). All our investment professionals can access these materials via the Proxy Manager and/or Proxy Voting and Governance Committee.

Engagement

In evaluating proxy issues and determining our votes, we welcome and seek out the points of view of various parties. Internally, the Proxy Manager may consult the Proxy Voting and Governance Committee, Chief Investment Officers, Directors of Research, and/or Research Analysts across our equities platforms, and Portfolio Managers in whose managed accounts a stock is held. Externally, we may engage with companies in advance of their Annual General Meeting, and throughout the year. We believe engagement provides the opportunity to share our philosophy, our corporate governance values, and more importantly, affect positive change. Also, these meetings often are joint efforts between the investment professionals, who are best positioned to comment on company-specific details, and the Proxy Manager(s), who offer a more holistic view of governance practices and relevant trends. In addition, we engage with shareholder proposal proponents and other stakeholders to understand different viewpoints and objectives.

Proxy Voting Guidelines

Our proxy voting guidelines are both principles-based and rules-based. We adhere to a core set of principles that are described in the Proxy Voting and Governance Policy. We assess each proxy proposal in light of these principles. Our proxy voting “litmus test” will always be what we view as most likely to maximize long-term shareholder value. We believe that authority and accountability for setting and executing corporate policies, goals and compensation generally should rest with the board of directors and senior management. In return, we support strong investor rights that allow shareholders to hold directors and management accountable if they fail to act in the best interests of shareholders.

Our proxy voting guidelines pertaining to specific issues are set forth in the Policy and include guidelines relating to board and director proposals, compensation proposals,

capital changes and anti-takeover proposals, auditor proposals, shareholder access and voting proposals, and environmental, social and disclosure proposals. The following are examples of specific issues within each of these broad categories:

Board and Director Proposals: Election of Directors

The election of directors is an important vote. We expect directors to represent shareholder interests at the company and maximize shareholder value. We generally vote in favor of the management-proposed slate of directors while considering a number of factors, including local market best practice. We believe companies should have a majority of independent directors and independent key committees. However, we will incorporate local market regulation and corporate governance codes into our decision making. We may support more progressive requirements than those implemented in a local market if we believe more progressive requirements may improve corporate governance practices. We will generally regard a director as independent if the director satisfies the criteria for independence (i) espoused by the primary exchange on which the company's shares are traded, or (ii) set forth in the code we determine to be best practice in the country where the subject company is domiciled and may take into account affiliations, related-party transactions and prior service to the company. We consider the election of directors who are "bundled" on a single slate to be a poor governance practice and vote on a case-by-case basis considering the amount of information available and an assessment of the group's qualifications.

Capital Changes and Anti-Takeover Proposals: Authorize Share Repurchase

We generally support share repurchase proposals that are part of a well-articulated and well-conceived capital strategy. We assess proposals to give the board unlimited authorization to repurchase shares on a case-by-case basis. Furthermore, we would generally support the use of derivative instruments (*e.g.*, put options and call options) as part of a share repurchase plan absent a compelling reason to the contrary. Also, absent a specific concern at the company, we will generally support a repurchase plan that could be continued during a takeover period.

Auditor Proposals: Appointment of Auditors

We believe that the company is in the best position to choose its accounting firm, and we generally support management's recommendation.

We recognize that there may be inherent conflicts when a company's independent auditors perform substantial non-audit related services for the company. Therefore, in reviewing a proposed auditor, we will consider the amount of fees paid for non-audit related services performed compared to the total audit fees paid by the company to the auditing firm, and whether there are any other reasons for us to question the independence or performance of the firm's auditor such as, for example, tenure. We generally will deem as excessive the non-audit fees paid by a company to its auditor if those fees account for 50% or more of total fees paid. In the U.K. market, which utilizes a different standard, we adhere to a non-audit fee cap of 100% of audit fees. Under these circumstances, we generally vote against the auditor and the directors, in particular the members of the company's audit committee. In addition, we generally vote against

authorizing the audit committee to set the remuneration of such auditors. We exclude from this analysis non-audit fees related to IPOs, bankruptcy emergence, and spin-offs and other extraordinary events. We may vote against or abstain due to a lack of disclosure of the name of the auditor while taking into account local market practice.

Shareholder Access and Voting Proposals: Proxy Access for Annual Meetings

These proposals allow “qualified shareholders” to nominate directors. We generally vote in favor of management and shareholder proposals for proxy access that employ guidelines reflecting the Commission framework for proxy access (adopted by the US Securities and Exchange Commission (“Commission”) in 2010, but vacated by the DC Circuit Court of Appeals in 2011), which would have allowed a single shareholder, or group of shareholders, who hold at least 3% of the voting power for at least three years continuously to nominate up to 25% of the current board seats, or two directors, for inclusion in the subject company’s annual proxy statement alongside management nominees.

We may vote against proposals that use requirements that are stricter than the SEC’s framework including implementation restrictions and against individual board members, or entire boards, who exclude from their ballot properly submitted shareholder proxy access proposals or include their own competing, more strict, proposals on the same ballot.

We will evaluate on a case-by-case basis proposals with less stringent requirements than the vacated Commission framework.

From time to time we may receive requests to join with other shareholders to support a shareholder action. We may, for example, receive requests to join a voting block for purposes of influencing management. If the third parties requesting our participation are not affiliated with us and have no business relationships with us, we will consider the request on a case-by-case basis. However, where the requesting party has a business relationship with us (*e.g.*, the requesting party is a client or a significant service provider), agreeing to such a request may pose a potential conflict of interest. As a fiduciary we have an obligation to vote proxies in the best interest of our clients (without regard to our own interests in generating and maintaining business with our other clients) and given our desire to avoid even the appearance of a conflict, we will generally decline such a request.

Environmental, Social and Disclosure Proposals: Lobbying and Political Spending

We generally vote in favor of proposals requesting increased disclosure of political contributions and lobbying expenses, including those paid to trade organizations and political action committees, whether at the federal, state, or local level. These proposals may increase transparency.

We generally vote proposals in accordance with these guidelines but, consistent with our “principles-based” approach to proxy voting, we may deviate from the guidelines if warranted by the specific facts and circumstances of the situation (*i.e.*, if, under the

circumstances, we believe that deviating from our stated policy is necessary to help maximize long-term shareholder value). In addition, these guidelines are not intended to address all issues that may appear on all proxy ballots. Proposals not specifically addressed by these guidelines, whether submitted by management or shareholders, will be evaluated on a case-by-case basis, always keeping in mind our fiduciary duty to make voting decisions that, by maximizing long-term shareholder value, are in our clients' best interests.

Conflicts of Interest

As a fiduciary, we always must act in our clients' best interests. We strive to avoid even the appearance of a conflict that may compromise the trust our clients have placed in us, and we insist on strict adherence to fiduciary standards and compliance with all applicable federal and state securities laws. We have adopted a comprehensive Code of Business Conduct and Ethics ("**Code**") to help us meet these obligations. As part of this responsibility and as expressed throughout the Code, we place the interests of our clients first and attempt to avoid any perceived or actual conflicts of interest.

We recognize that there may be a potential material conflict of interest when we vote a proxy solicited by an issuer that sponsors a retirement plan we manage (or administer), that distributes AB-sponsored mutual funds, or with which we or one or more of our employees have another business or personal relationship that may affect how we vote on the issuer's proxy. Similarly, we may have a potential material conflict of interest when deciding how to vote on a proposal sponsored or supported by a shareholder group that is a client. In order to avoid any perceived or actual conflict of interest, we have established procedures for use when we encounter a potential conflict to ensure that our voting decisions are based on our clients' best interests and are not the product of a conflict. These procedures include compiling a list of companies and organizations whose proxies may pose potential conflicts of interest (*e.g.*, if such company is our client) and reviewing our proposed votes for these companies and organizations in light of the Policy and ISS's recommendations. If our proposed vote is contrary to, or not contemplated in, the Policy, is consistent with a client's position and is contrary to ISS's recommendation, we refer to proposed vote to our Conflicts Officer for his determination.

In addition, our Proxy Voting and Governance Committee takes reasonable steps to verify that ISS continues to be independent, including an annual review of ISS's conflict management procedures. When reviewing these conflict management procedures, we consider, among other things, whether ISS (i) has the capacity and competency to adequately analyze proxy issues; and (ii) can offer research in an impartial manner and in the best interests of our clients.

Voting Transparency

We publish our voting records on our Internet site (www.alliancebernstein.com) quarterly, 30 days after the end of the previous quarter. Many clients have requested that

we provide them with periodic reports on how we voted their proxies. Clients may obtain information about how we voted proxies on their behalf by contacting their Advisor. Alternatively, clients may make a written request to the Chief Compliance Officer.

Recordkeeping

All of the records referenced in our Policy will be kept in an easily accessible place for at least the length of time required by local regulation and custom, and, if such local regulation requires that records are kept for less than five years from the end of the fiscal year during which the last entry was made on such record, we will follow the U.S. rule of five years. We maintain the vast majority of these records electronically. We will keep paper records, if any, in one of our offices for at least two years.
